PREFACE

THE following work is an attempt to furnish in a single volume of moderate compass what is most essential for the study of the Oscan and Umbrian dialects. In spite of the meagreness of the material, as compared with languages like Greek and Latin, and in spite of the many questions of detail which are still unsolved, the main features of these two dialects are well understood. such is their relation to Latin that some acquaintance with them is important, not to the Indo-Europeanist alone, but to the student of the Latin language, and, in a less degree, to the student of the history and antiquities of Italy. In order that a knowledge of the dialects should become more general, it is not enough that we have now such excellent works as Conway's Italic Dialects, with its full presentation of the existing material, and von Planta's exhaustive Grammatik der Oskisch-Umbrischen Dialekte. fullness of v. Planta's treatment, the conscientious weighing of possibilities, and the liberal citation of authorities, all add to its value as a work of reference, but the resulting bulk of 1372 pages is likely to deter one who can devote only a moderate amount of time to the subject. That there is need of a briefer grammar has long been the author's conviction, which has only been strengthened by inquiries and suggestions from others in this country and abroad.1

In order to secure the desired brevity, it has been necessary to eliminate almost wholly any detailed discussion of disputed points, as well as special references for the views adopted or rejected. Any one for whom the general bibliography given below is not sufficient may be referred to v. Planta. Only in a few cases, here

¹ So Skutsch, in a review of the author's Oscan-Umbrian Verb-System, Berliner Philologische Wochenschrift, November, 1895: "Der Verf. käme einem Bedürfniss entgegen, wenn er eine vollständige Grammatik des O.-U. im Massstab seines Verb-Systems schriebe. Denn neben dem trefflichen, aber weitschichtigen Werke v. Plantas ist ein kurzes Handbuch zur Einführung erwünscht."

and there, I have added references in footnotes, mostly to discussions more recent than v. Planta. Generally I have simply stated the view which seemed to me on the whole the most probable, or else contented myself with a non liquet. It is scarcely necessary to state that in matters of dispute I have had no predilection for my own previously expressed views, but have with equal freedom rejected them in favor of others or retained them against others, according to my present judgment.

That the treatment is historical and comparative, not merely descriptive, is a matter of course. But the emphasis is on Italic, rather than on Indo-European, relations. In the case of words which are peculiar to the dialects and not found in Latin, a fairly wide range of cognates is cited, as in sections 15, 16. But ordinarily comparison within the Italic is deemed sufficient, and forms from other Indo-European languages are introduced only for special reasons.

The grammar is called a Grammar of Oscan and Umbrian, not of the Oscan-Umbrian dialects, for it does not pretend to treat systematically the minor dialects included under the name Oscan-Umbrian. Most of the characteristics of these dialects (so far as they are clear) are mentioned incidentally, mainly in the Introduction. But to discuss or even mention all the questions arising in the attempt to generalize from material consisting of only a few lines, would require an amount of space not justified by the results. Unless the material from these minor dialects is notably increased, our knowledge of the Oscan-Umbrian group will be almost coincident with what we know of its two principal dialects. And in this approximate sense a grammar of Oscan and Umbrian is also a grammar of Oscan-Umbrian.

As the book has been practically ready for the press since the beginning of the year, and the Phonology in type since February, almost nothing in the literature of 1903 has been taken account of. But in what has appeared there is little which has entirely convinced me. Special mention may be made of Brugmann's discussion of the negative prefix an- and anter 'inter' (I.F. 15, 70 ff.). I have myself wished there were some way of equating these directly with

the Latin, instead of assuming by-forms (as in 98 with c), which indeed seems out of the question in the case of Anafríss if = L. Imbribus (see 98, b). But Brugmann's assumption that "initial e before nasal + consonant had a very open pronunciation in the Oscan-Umbrian period and had perhaps become identical in this position with Italic a" fails to convince me, in view of O. embratur, Entraí, and especially U. iseçeles 'insectis.' Nor do I see the necessity of separating O. ant from L. ante because of its meaning 'as far as' (see 299, 2).

For assistance I am indebted to Professors J. C. Rolfe and Minton Warren, who kindly offered to read proof, and especially to my pupils, Mr. W. C. Gunnerson and Mr. R. B. Nelson, who have gone over the proof with great care, devoting no small amount of time to the verification of references, citations, etc., and contributing in every way to the accuracy of the text. The remarkable keenness and intelligence of the proof-reader in the office of the publishers has also saved the work from many blemishes.

C. D. B.

DECEMBER, 1903.

BRIEF BIBLIOGRAPHY¹

The history of the study of the Italic dialects might be expected to date from the discovery of the Iguvinian Tables in 1444, but for several centuries all the attempts to decipher these were wholly The first sign of progress is found in Lanzi, Saggio di lingua Etrusca e di altre antiche d'Italia, Rome, 1789, in which the ritual character of the contents was recognized. In the first half of the nineteenth century fall, among others, the contributions of K. O. Müller, who in his great work on the Etruscans (Die Etrusker, 1828; 2d ed. by Deecke, 1877) definitely disposed of the error that Oscan and Umbrian were connected with Etruscan; of the Sanskritist Lassen, who gave a critical treatment of a section of the Iguvinian Tables in his Beiträge zur Deutung der eugubinischen Tafeln, Bonn, 1833; of Grotefend, celebrated for his decipherment of the Old Persian cuneiform, who treats selected passages in his Rudimenta linguae Umbricae, Hanover, 1835-1839; of Lepsius, the future Egyptologist, who in his dissertation, De tabulis Eugubinis, Berlin, 1833, cleared up the remaining difficulties of the alphabet and proposed a chronological arrangement of the tables which is still followed in the universally adopted numbering. Lepsius also brought out the first trustworthy edition of the Oscan inscriptions together with the Umbrian, the Inscriptiones Umbricae et Oscae, Leipzig, 1841.

A work of prime importance for the study of Oscan and the minor dialects was Mommsen's Unteritalische Dialekte, Leipzig, 1850. A similarly fundamental work for Umbrian was Aufrecht and Kirchhoff's Die umbrischen Sprachdenkmäler, 1849–1851, the first really critical attempt to interpret the Iguvinian Tables as a whole. Kirchhoff was also the first to recognize the true character of the longest Oscan inscription, the Tabula Bantina, in his elaborate commentary, Das Stadtrecht von Bantia, Berlin, 1853. In Huschke's Die oskischen und sabellischen Sprachdenkmäler, 1856, and Die iguvischen Tafeln, 1859, a wealth of knowledge on the side of antiquities

¹ A full bibliography is given by v. Planta, II, pp. xi ff. For the history of the interpretation of the Iguvinian Tables, see especially Bréal, Tab. Eug., pp. i ff.

is marred by a lack of critical judgment, especially in grammatical points, so that while some of the many daring conjectures have proved serviceable, his works in general mark a step backward. Newman's Text of the Iguvine Inscriptions, London, 1864, is without much value. Grammatical questions were also discussed in numerous articles by Corssen, Ebel, Bugge, and others. Bruppacher's Oskische Lautlehre, 1869, and Enderis' Oskische Formenlehre, 1871, were convenient little manuals for the time, though valueless to-day.

In the last quarter of the nineteenth century the most notable advance in the interpretation of the dialect remains was made by the works of Bréal and of Bücheler. Besides their exhaustive commentaries on the Iguvinian Tables, cited below, each of these scholars has discussed in one form or another most of the more important Oscan inscriptions. Important contributions were also made by Bugge, Danielsson, Deecke, Jordan, Pauli, and others. New editions of the Oscan and Sabellian inscriptions with facsimiles were brought out by the Russian scholar Zvetaieff in 1878 and 1884 (cited below).

The Italic dialects have always held an important place in the interest of Indo-European philologists, and Brugmann especially has done much to further their study, both as author and teacher. It is not too much to say that the works of former pupils of his, appearing from 1892 on, especially the treatises of Bronisch and the present writer, von Planta's grammar, and Conway's edition of the texts, all cited below, have put the whole subject on a new footing. Contributions on special points, too numerous to specify here, have been made in recent years by F. D. Allen, Bartholomae, Ceci, Ehlich, Fay, Horton-Smith, Pascal, Skutsch, Solmsen, and others.

The following is a list of the works which are now the most useful to the student.

Indo-European Grammar

Brugmann-Delbrück, Grundriss der vergleichenden Grammatik der indogermanischen Sprachen. 5 vols. Strassburg, 1886–1900. Vol. I in 2d ed., 1897. Vols. I-II (Phonology and Morphology) by K. Brugmann (abbr. Brugmann, Grd.); vols. III-V (Syntax) by B. Delbrück (= Delbrück, Vergl. Syntax, I-III).

The Oscan and Umbrian dialects are treated systematically and as fully as the wide scope of the work permits.

Brugmann, Kurze vergleichende Grammatik der indogermanischen Sprachen. Parts I-II, Strassburg, 1902–1903.

In this shorter work, to be completed within the limits of a single volume, Oscan and Umbrian forms are mentioned only incidentally in connection with the treatment of Latin.

Latin Grammar

LINDSAY, The Latin Language. Oxford, 1894.

Sommer, Handbuch der lateinischen Laut- und Formenlehre. Heidelberg, 1902.

Stolz, Historische Grammatik der lateinischen Sprache. Leipzig, 1894.

Oscan-Umbrian Grammar

von Planta, Grammatik der oskisch-umbrischen Dialekte. 2 vols. Strassburg, 1892–1897 (abbr. v. Planta).

A sound and exhaustive treatment, fundamental for all future work. Also contains the texts.

A brief sketch of Oscan-Umbrian grammar is included in Conway's Italic Dialects, and of Umbrian grammar in the commentaries of Bréal, Bücheler, and others, quoted below. Special chapters of the grammar are treated in:

Bronisch, Die oskischen I- und E-Vocale. Leipzig, 1892.

Buck, Der Vocalismus der oskischen Sprache. Leipzig, 1892 (abbr. Osk. Voc.).

Buck, The Oscan-Umbrian Verb-System. Chicago, 1895 (abbr. Verb-System).

Texts and Commentaries 1

Conway, The Italic Dialects. 2 vols. Cambridge, 1897.

The most exhaustive collection of the material, containing the inscriptions with full epigraphical data, the glosses, lists of proper names, etc., together with a brief sketch of the grammar, and a glossary.

A concise but complete collection of the inscriptions is also included in v. Planta's Grammatik, cited above.

Conway, Dialectorum Italicarum Exempla Selecta. Cambridge, 1899. Selections from the dialect inscriptions, with translation and brief notes.

Aufrecht und Kirchhoff, Die umbrischen Sprachdenkmäler. 2 vols. Berlin, 1849–1851.

See above, p. xiii. Still to be consulted with profit.

¹ References for particular Oscan inscriptions are given in the Collection of Inscriptions.

Bréal, Les Tables Eugubines. Paris, 1875 (abbr. Tab. Eug.).

This and the following are the two leading commentaries on the Iguvinian Tables.

BÜCHELER, Umbrica. Bonn, 1883.

On the whole the most convincing interpretation of the Umbrian remains, and followed in large measure in the present work.

Mommsen, Die Unteritalischen Dialekte. Leipzig, 1850 (abbr. Unterit. Dial.).

See above, p. xiii. Still valuable for the epigraphical data and the geographical and historical notes.

ZVETAIEFF, Sylloge Inscriptionum Oscarum. St. Petersburg and Leipzig, 1878.

ZVETAIEFF, Inscriptiones Italiae Mediae Dialecticae. Leipzig, 1884.

These two collections are now mainly valuable on account of the accompanying facsimiles.

Contributions on special points of grammar and interpretation are found in the various journals, proceedings of learned societies, and series of studies, especially the following.

American Journal of Philology (abbr. Am. J. of Ph.).

Beiträge zur Kunde der indogermanischen Sprachen. Ed. by A. Bezzenberger (abbr. B.B. = Bezzenbergers Beiträge).

Berichte über die Verhandlungen der königlichen sächsischen Gesellschaft der Wissenschaft zu Leipzig. Philologisch-historische Classe (abbr. Ber. d. sächs. Gesell. d. Wiss.).

Classical Review.

Indogermanische Forschungen. Zeitschrift für indogermanische Sprach- und Altertumskunde (abbr. I.F.), with the Anzeiger für indogermanische Sprach- und Altertumskunde (abbr. I.F. Anz.). Mémoire de la Société de Linguistique de Paris (abbr. Mém. Soc.

Ling.).

Pauli's Altitalische Studien. 5 vols. Hanover, 1883-1887.

Rheinisches Museum für Philologie (abbr. Rh. M.).

Zeitschrift für vergleichende Sprachforschung auf dem Gebiete der indogermanischen Sprachen. Founded by A. Kuhn (abbr. K.Z. = Kuhns Zeitschrift).

EXPLANATIONS

Black type is used to transcribe words in the native alphabets, and *italics* for those in the Latin alphabet. The same distinction is commonly employed for separate letters or groups of letters. But sometimes, to save unnecessary repetition, italics are used referring to the spelling of both the native and Latin alphabets. Glosses cited are always indicated as such, except the frequently cited *famel*.

The meanings of words cited are usually given, though not always, especially where they can easily be inferred from the Latin cognates cited. Vice versa, Latin cognates are sometimes left to be inferred from the Latin translations. In the case of words of doubtful meaning these translations in the grammar are to be regarded as expedients, subject to amplification or correction in the glossary. In the texts uncertain letters are distinguished by a change of type, and where obvious mistakes are corrected the original reading is given in footnotes to the text. But in the grammar proper such matters are usually ignored except when bearing directly on the subject of discussion.

The signs i and u are used for consonantal i and u, English y and w; y, y, y, l, for the syllabic nasals and liquids assumed in Indo-European forms. The colon (:) is used to point out relationship, in the sense of "cognate with." Besides the abbreviations of works of reference mentioned above, the following are used.

Av. = Avestan.

C.A. = Cippus Abellanus (no. 1).

Eng. = English.

Fal. = Faliscan. Germ. = German.

Goth. = Gothic.

Grk. = Greek.

I.E. = Indo-European.

 $\begin{aligned} & \text{Ital.} = \text{Italian.} \\ & \text{L.} = \text{Latin.} \end{aligned}$

Lith. = Lithuanian.

Marruc. = Marrucinian.

 $O_{i} = Oscan$.

O.Bulg. = Old Bulgarian.

O.Eng. = Old English.

O.H.G. = Old High German.

O.Ir. = Old Irish.

O.Pruss. = Old Prussian.

Pael. = Paelignian. Sab. = Sabine.

Skt. = Sanskrit.

T.A. = Tablet of Agnone (no. 45).

T.B. = Tabula Bantina (no. 2.)

U. = Umbrian.

Vest. = Vestinian.

OSCAN AND UMBRIAN GRAMMAR

INTRODUCTION

Peoples and Languages of Italy

1. The Italian peninsula, in the earliest period of history, was occupied by various peoples speaking a variety of languages and dialects.

The Ligurians in the northwest have usually been regarded as relics of an aboriginal, pre-Indo-European, population, but are now thought by some to be Indo-European.¹ The linguistic remains, consisting largely of geographical names, are too meagre to be decisive.

The Etruscans (Latin Etrūscī or Tuscī, the latter from *Turscī; cf. Umbrian Turskum, Greek Τυρσηνοί, Τυρρηνοί) occupied Etruria, and, previous to the Celtic invasions, much of the central part of northern Italy, in the valley of the Po. They were also masters of Campania from the eighth century B.C. down to the Samnite invasion in the last quarter of the fifth century B.C. The Etruscan inscriptions 2 number over six thousand, but only a few hundred contain anything more than proper names, and less than a dozen of these are of any considerable length. The interpretation is wholly uncertain and nothing positive can be affirmed as to the affinities of the language. But it is reasonably clear that it is not Indo-European. The riddle will probably remain unsolved until the discovery of a bilingual inscription of some length.

¹ Cf. Kretschmer, K.Z. 38, 108 ff.

 $^{^2}$ Now being collected in the Corpus Inscriptionum Etruscarum.

The Veneti, at the head of the Adriatic, and the Messapians and Iapygians in Calabria have commonly been grouped together as of Illyrian origin. There are several hundred short Venetian inscriptions,¹ and the Messapian is also represented by some hundred and sixty short inscriptions.² From these remains it appears that the two languages, though Indo-European, do not belong to the same group, and it is uncertain whether the Venetian, or the Messapian with the modern Albanian, should be classed as Illyrian.³

Greek colonies occupied nearly the entire southern portion of Italy, many of them dating from a period earlier than the beginnings of Roman history and retaining their Greek character for several centuries after Christ.

Celtic tribes which poured in from the north, and in the early part of the fourth century B.C. sacked Rome, maintained themselves for some time in the central plains of northern Italy.

The rest of Italy was occupied by tribes speaking dialects akin to the Latin and with it constituting the Italic branch of the Indo-European family.

CLASSIFICATION OF THE ITALIC DIALECTS

2. The Italic Dialects fall into two groups, the Latin-Faliscan and the Oscan-Umbrian.

The Latin-Faliscan comprises the Latin, of which there were local variations in the different towns of Latium, and the Faliscan, spoken in the Faliscan plain in the southeastern part of Etruria. The few short inscriptions 4 are sufficient to show that Faliscan differed but slightly from Latin.

The Oscan-Umbrian group is so named from its two most important members, the Oscan and the Umbrian, but includes

¹ Collected in Pauli, Die Veneter, Altitalische Forschungen III.

² Mostly in Fabretti, Corpus Inscriptionum Italicarum.

³ On the Illyrian question, cf. Pauli, l. c.; Kretsehmer, Einleitung in die griechische Sprachgeschichte, 244 ff.; Hirt, Festschrift für Kiepert, 181 ff.; Pedersen, K.Z. 36, 299 ff.

⁴ Collected in Deecke, Die Falisker.

also the dialects of most of the minor tribes of central Italy, which may be conveniently designated as Sabellian.¹ The best known of these is the Paelignian, which shows a very close resemblance to Oscan. Much the same are the dialects of the neighboring Marrucinians and Vestinians, of which there are some scanty remains. Volscian, known only from an inscription of four lines from Velitrae, is more strongly differentiated and in several particulars resembles Umbrian more than Oscan; but there is no sufficient reason for grouping it otherwise than among the Sabellian dialects. The Marsians, Aequians, and Sabines are connected historically with the other Sabellian tribes, and their dialects doubtless belong properly to the same group. But they were subjected to Latin influence from a very early period, and the meagre remains that we have give no satisfactory picture of their characteristics.

OSCAN — EXTERNAL DATA

3. Oscan inscriptions have been found in Samnium (inclusive of the territory of the Frentani and Hirpini), Campania, northern Apulia, Lucania, and Bruttium, and in the Sicilian city of Messana from the period after its occupation by the Campanian Mamertines. These are precisely the regions which we know were occupied by Samnite tribes. In calling the language Oscan rather than Samnitic we are following the usage of the Latin authors, as when Livy (10, 20) relates how in one

¹ The etymological connection of Sabellus (from *Saf-no-lo-), Sabīnī (from *Saf-īnoi), and Samnium (from *Saf-nio-m; cf. Oscan Safinim), together with the tradition of the Sabine origin of the Samnites and the minor tribes like the Paeligni, is a witness to the tribal relations of these peoples. The Roman writers use Sabellus in the sense of Samnitic, and it is properly a generic term including Samnitic. Strictly speaking the Samnite tribes were Sabellian, and their language, the Oscan, a Sabellian dialect. But the Samnites and their language occupy such a preëminent position that they are best grouped by themselves, and we may, for convenience, reserve the name Sabellian for the closely related minor tribes and dialects.

The so-called Old Sabellian inscriptions, found in various parts of central Italy, are wholly unintelligible, and certainly are not in any of the Sabellian dialects. They possibly represent the language of some Illyrian tribes.

of the Samnite wars the Roman consul sent out spies who were acquainted with the Oscan language. Now the Oscans (Lat. Oscī, earlier Opscī, Grk. 'Οπικοί') were a Campanian tribe, and it has been held by some that Oscan was not the original language of the Samnites, but was adopted by them after their invasion of Campania. But this is altogether improbable. must, rather, assume that the Oscans were simply a detached branch of the Samnites, speaking essentially the same language; and the principal reason why this language was called Oscan rather than Samnitic is that it was among the Oscans that the Greeks and Romans first came in contact with it. The Samnites entered the field of history as a politically distinct people from the Oscans; but their language, being the same, was called by the name already established. Moreover it was among the Oscans, by reason of their early contact with Greek and Etruscan civilization, that the language was first reduced to writing, so that while they did not give the Samnites a new language, they did give them its written form, and to a certain extent, probably, a sort of normalized standard of speech. This last supposition would help account for the fact that local variations of Oscan, outside of Campania, are far less marked than one would expect, considering the extent of the territory in which the language was spoken.

4. The Oscan inscriptions number over two hundred, but more than half of these contain only proper names or fragments of words. About three quarters of them come from Campania, where Pompeii, and in recent years Capua, have furnished the greatest number.

The period of time covered is nearly five centuries, the earliest remains being some coin-legends from the end of the fifth or first half of the fourth century B.C., while the latest are some of the graffiti of Pompeii, which there is reason to believe were scratched on the walls after the first earthquake in 63 A.D. But by far the greater part of the material falls between 300 B.C. and the Social War in 90-89 B.C. After the Social War Oscan

ceased to be used in official documents, but continued to exist as a local patois for some time, — how long we cannot tell. If at Pompeii it was still spoken, to some extent at least, in the first century A.D., it very likely lingered on for several centuries in the remoter districts of Samnium.

Most of the inscriptions are written in the native Oscan alphabet, which is derived, through the medium of the Etruscan, from the Greek of the Chalcidian type. But a few from Lucania, including the longest Oscan inscription known, the Tabula Bantina, are in the Latin alphabet, and some from Sicily and various parts of southern Italy are in the Greek alphabet.

5. As regards contents, many well-known classes of inscriptions are represented. The Tabula Bantina, the longest inscription, itself only a fragment of the original, contains a series of municipal regulations. The next longest, the Cippus Abellanus, is an agreement between the cities of Nola and Abella touching certain temple property held in common. From Agnone in Samnium comes an inventory of statues and altars in a sacred grove. The Curse of Vibia, from Capua, together with a few shorter curses, belongs to the class of devotiones of which there are many examples among Greek and Latin inscriptions. There are several inscriptions on public works from Pompeii and elsewhere; also dedications, including a peculiar series of iovilae-dedications, mostly from Capua, the nature of which is not fully understood. Certain inscriptions painted on house-fronts near some of the street-corners in Pompeii seem to be guides for the allied troops occupying the city in the Social War. There are numerous inscribed coins from various towns, some of them older than any of the inscriptions on stone; also several from the time of the Social War, bearing the legend Víteliú 'Italia', and the names of the leaders of the There are a few epitaphs, many bricks inscribed with names, and probably one of the well-known inscribed missiles; also some illegible electioneering notices, not to mention various other insignificant scrawls, on walls in Pompeii.

- 6. Besides the inscriptions, there are some secondary sources, such as the Oscan glosses, mostly in Varro and Festus, and the geographical and personal names from Oscan territory. But they contribute relatively little to our knowledge of the dialect.
- 7. Oscan was not a mere patois, nor was it so regarded by the earlier Roman writers. Ennius, in boasting of having three souls because he could speak Greek, Oscan, and Latin, gave to Oscan a position which he had no thought of giving to the local vernacular of his home, the Messapian. For a long time, while Latin was still confined to Latium and its immediate borders, Oscan was spoken over a vastly wider territory. It was the language of the people which gave the Romans the hardest fight for the hegemony of Italy. In the early centuries the Oscans of Campania, under the Etruscan rule, and close to the Greek colonies of Cumae, Naples, etc., stood on fully as high a plane of civilization as the Romans of the same period. Eminent scholars like Mommsen have expressed the conviction that there once existed an Oscan literature, and certainly the conditions for the rise of a native literature were as favorable as at Rome. But nothing has come down to us, not even a reference to anything more pretentious than the puppet-shows introduced in Rome from Campania under the name of fabulae Atellanae or ludi Osci. At Rome, of course, these were no longer given in Oscan, but in rustic Latin.

Umbrian — External Data

8. Aside from a few short inscriptions from various towns of Umbria, the Umbrian remains consist of the Iguvinian Tables, discovered at Gubbio, the ancient Iguvium, in the fifteenth century. These are seven small bronze tablets (originally nine, but two were lost soon after the discovery), most of them inscribed on both sides, and containing together between four and five thousand words. This makes a far more extensive document than any representing any other dialect except Latin.

- 9. Some of the tables are written in the native Umbrian alphabet, which like the Oscan is derived from the Greek through the Etruscan, others in the Latin alphabet. These two divisions of the material are conveniently distinguished as Old Umbrian and New Umbrian, but the differences are in part merely orthographic, and, at most, far less marked than those which are usually associated with the terms Old and New in such a connection. The New Umbrian tables may date from the early part of the first century B.C. How much earlier the Old Umbrian tables are it is impossible to say; different parts were inscribed at different times, and even the relative order is not fully determined. See the Commentary on the Iguvinian Tables.
- 10. The contents of the Tables consist of the acts of a certain corporation of priests known as the Atiedian Brothers, and in their general character resemble the Roman Acta Arvalium. They contain directions for various ceremonies, such as the Purification of the Sacred Mount and the Lustration of the People, as well as the more private functions of the brotherhood, with minute prescriptions as to the taking of auspices, manner of sacrificing the victims, etc.; also statements as to the duties of certain officials, perquisites of the priests, contributions to be made to the brotherhood by certain gentes, etc. Some of the older tables contain matter which is repeated in an expanded form in the later tables.

GENERAL CHARACTERISTICS OF THE OSCAN-UMBRIAN GROUP

Phonology

11. The most striking characteristics, as regards phonology, are:

Change of the labiovelars q_{ω}^{u} and g_{ω}^{u} , which appear in Latin as qu and v (gu after n), to the labials p and b; e.g. O. pis 'quis', U. pisi, Volse. pis, Marrue. nipis; — O. bivus 'vivi'; — U. benust 'venerit'; — U. umen (from *umben) 'unguen'.

Extensive syncope of short vowels in non-initial syllables; e.g. O. actud 'agito'; — U. fiktu 'figito'; — O. húrz 'hortus'; — U. Ikuvins 'Iguvinus'; — O. akkatus 'advocati'.

Assimilation of nd to nn; e.g. O. úpsannam 'operandam'; — U. pihaner 'piandi' (n for nn, 26).

Retention of s before nasals and liquids, where it is lost in Latin; e.g. O. físnam 'fanum', U. fesnaf-e, Pael. fesn.; — O. kersnu 'cena', U. sesna; — Pael. prismu 'prima'.

Retention of a in medial syllables, where it is weakened in Latin to e or i; e.g. O. Anterstatai '*Interstitae'; — U. antakres 'integris'; — U. procanurent '*procinuerint'.

Representation of original bh and dh by f, not only initially as in Latin, but also medially, where Latin has b or d; e.g. O. tfei, U. tefe 'tibi'; — O. mefiai 'in media'; — U. rufru 'rubros'.

Change of final \bar{a} , which in Latin is shortened, in the direction of \bar{o} ; e.g. O. molto, U. mutu, muta 'multa'.

Change of kt to ht, and of pt to ft (Umbrian, further, to ht); e.g. O. Úhtavis 'Octavius'; — U. rehte 'recte'; — O. scriftas 'scriptae', U. screhto.

Assimilation of ks to ss, s; e.g. O. destrst 'dextra est', U. destram-e.

Change of ns to f, though under different conditions in Oscan and Umbrian; e.g. O. úíttiuf 'usus' from *oitiōn-s;—U. Acc. Pl. eaf 'eas' (also Marruc. iaf-c) from *eans (but O. víass).

Inflection

12. Declension. The types of noun-declension are sufficiently like the Latin to fall naturally into the same grouping of Five Declensions. But the Fifth Declension is represented by only a few forms, and in the Third Declension the consonant-stems and *i*-stems are kept distinct in a greater number of caseforms than in Latin. The Cases are the same as in Latin, except that, in the Singular, the Locative exists as a distinct form with full syntactical functions. The important differences in caseformation are as follows (for examples, see the paradigms):

First Declension. The Gen. Sg. has the original ending $-\bar{a}s$, which is preserved in Latin only in phrases like *pater familiās*; the Nom. Pl. has the original ending $-\bar{a}s$, which is lost in Latin.

Second Declension. The Gen. Sg. has the ending -eis, from i-stems; the Dat. Sg. has the ending -oi, which occurs in Latin only in Numasioi of the Praenestine brooch; the Nom. Pl. has the original noun-ending -ōs for both nouns and pronouns, while the Latin has -ī, from -oi, the pronominal ending; the Gen. Pl. has only the original -ōm (L. -um), there being nothing to correspond to L. -ōrum, which is a specifically Latin development.

Third Declension. The Gen. Sg. always has -eis, the ending of i-stems, while Latin -is is the proper ending of consonant-stems; the Acc. Sg. of consonant-stems has -om, from o-stems; in the Nom. Pl. the consonant-stems and i-stems are kept distinct, the former having the original ending -es with syncope of the e, the latter -ēs as in Latin (O. humuns 'homines', but tris 'tres').

13. Conjugation. The conjugation-types are the same as in Latin, the material grouping itself under the Four Conjugations, leaving the relics of unthematic inflection as "Irregular Verbs." But the type represented by Latin capiō is, in origin, more closely connected with the Fourth Conjugation than with the Third, and in Oscan-Umbrian is better grouped with the Fourth.

The Moods are the same. As in Latin, the Subjunctive is a fusion of original Subjunctive and Optative forms, and the distribution of the forms is the same as in Latin, except in the Perfect Subjunctive (see below).

The Tenses are the same, except that, perhaps accidentally, there is no example of a Pluperfect.

The Voices are the same, but of the Passive there are only forms of the Third Singular and Third Plural.

Of the non-finite forms there are found a Present Active Participle, Perfect Passive Participle, Gerundive, Present Active Infinitive, Perfect Passive Infinitive, and Supine. The Gerund, Perfect Infinitive Active, Future Infinitives, Present Infinitive Passive, and Future Active Participle are lacking. The absence of examples of some of these forms is possibly a mere accident, but it is probable that most of them are specifically Latin formations.

The important differences in formation are as follows:

The Pres. Infin. Act. ends in -om; e.g. O. ezum, U. erom'esse'.

The Future is an s-formation, in origin a short-vowel Subjunctive of an s-Aorist; e.g. O. deiuast 'iurabit', U. ferest 'feret'.

The Fut. Perf. is an us-formation, probably based on an old Perf. Act. Partic. in -us combined with a short-vowel Subjunctive of the verb 'to be'; e.g. O. dicust 'dixerit', U. benust 'venerit'.

Among the different formations making up the Perfect System, the f-Perfect is characteristic of Oscan-Umbrian; e.g. O. aikdafed 'decrevit', U. andirsafust 'circumtulerit'. (Oscan-Sabellian has also a tt-Perfect, and Umbrian an l-Perfect and an nki-Perfect.) The Latin vī- and s-Perfects are lacking.

The Perf. Subj. is a real Subjunctive form with the mood-sign \bar{e} , not an Optative with mood-sign $\bar{\imath}$ as in Latin; e.g. O. tribarakattins 'aedificaverint', U. combifiansi 'nuntiaverit'.

In the Third Singular and Third Plural there is a distinction between primary endings, which are -t, -nt, and secondary endings, which are -d (lost in Umbrian), -ns; e.g. O. faamat 'habitat', but fakiad 'faciat'; — O. stahint 'stant', U. furfant 'purgant', but O. deicans 'dicant', U. dirsans 'dent'. Latin shows -d in some of the earliest inscriptions, but nothing corresponding to -ns.

The unthematic form of the Third Plural, -ent, which in Latin is always replaced by the thematic form -ont, -unt, is preserved, and even extended to thematic formations; e.g. O. set, U. sent 'sunt', O. censazet 'censebunt'.

The Third Singular and Third Plural of the Passive have an ending -ter, unknown in Latin, while the Latin -tur appears only in Umbrian secondary tenses; e.g. O. vincter 'convincitur', karanter 'vescuntur', U. herter 'oportet'; U. emantur 'accipiantur'.

The Third Singular Passive has also a peculiar set of forms in which the ending is neither *-ter* nor *-tur*, but simply *-r*; e.g. U. *ferar* 'feratur', O. sakrafír (Perf. Subj.) 'sacrato'.

The Imperative Passive has an ending $-m\bar{o}(d)$, O. $-m\bar{o}-r$, which is of similar origin to the early Latin $-min\bar{o}$; e.g. O. censamur 'censetor', U. persnihimu 'precator'.

Syntax

14. The Syntax shows a remarkably close resemblance to the Latin. There are no uses of the moods and tenses which cannot be paralleled in the Latin, the agreement being closest, in some respects, with early Latin prose. The Passive forms include both genuine Passives and Deponents, as in Latin, but the frequent impersonal use is characteristic of Oscan-Umbrian. In the use of the cases there are many interesting constructions, of which the following are the most noteworthy. The Locative, being preserved as a distinct case-form, is used where the Latin requires in with the Ablative, e.g. O. eisei terei in eo territorio'. The Partitive Genitive has a wider scope than in Latin, e.g. U. iuenga peracrio tursituto 'iuvencas ex opimis fuganto'. A Genitive of Time is seen in O. zicolom XXX nesimum in diebus XXX proximis'. The Genitive is used more freely than in Latin to denote the matter involved; e.g. O. eizazunc egmazum 'in these matters', U. pusi ocrer pihaner 'as in the case of the purification of the mount'. The prepositions corresponding to Latin inter and trāns are used with both Accusative and Locative; those corresponding to ob and post are used with the Ablative.

Vocabulary 1

15. Of words which are characteristic of Oscan-Umbrian as compared with Latin, the following are the most important examples:

¹ Special attention is given here to the lexical peculiarities, since these are not, like the other characteristics, the subject of fuller treatment in the grammar proper.

- her- 'velle'. O. herest 'volet', heriam 'arbitrium, vim', Herentateis 'Veneris' (Pael. Herentas); U. heri 'vult', heriest 'volet', etc., herter 'oportet', heris 'vel', pis-her 'quilibet'. Cf. L. horior, hortor, Grk. χαίρω, Skt. háryāmi 'be gratified, delight in', Goth. -gairns 'eager', Eng. yearn. This root completely displaces uel- (L. volō) in the meaning 'wish', the latter appearing only in a specialized meaning; e.g. U. veltu 'deligito', ehueltu 'iubeto'.
- 2. toutā- 'civitas, urbs, populus'. O. τωρτο Μαμερτινο 'civitas Mamertina', toutad praesentid 'populo praesente', touticom 'publicum', etc.; U. totam Iiouinam 'civitatem Iguvinam', tuderor totcor 'fines urbici', etc.; Marruc. toutai Maroucai 'civitati Marrucinae'; Volse. toticu 'publico'. Cf. Lith. tauta 'people', O.Pruss. tauto 'country', O.Ir. tuath 'people', Goth. piuda 'people', O.Eng. péod 'people, nation', etc.
- 3. ais-'sacer, divinus'. O. aisusis 'sacrificiis'; U. esona 'sacras', esono 'sacrificium'; Marruc. aisos 'dis'(?); Mars. esos 'dis'(?); Volsc. esaristrom 'sacrificium'; aἰσοί · θεοὶ ὑπὸ Τυρρηνῶν (Hesychius), aesar Etrusca lingua deus (Suetonius). Perhaps related to Germ. Ehre (Goth. *aiza), and to Goth. aistan 'revere', L. aestimō, from aiz-d-.
- 4. komno- 'comitium'. O. comono 'comitia'; U. super kumne 'super comitio', kumnahkle 'in conventu'. From kom 'cum' + suffix -no- (cf. L. prō-nus, trāns-trum).
- 5. hontro- 'inferus'. O. hu[n]truis 'inferis'; U. hondra 'infra', Superl. hondomu 'infimo'. From hom-, related to L. humus, Grk. χαμαί, χθών, etc. For meaning cf. L. humilis, Grk. χθαμαλός, Lith. żēmas 'low', żemỹn 'down', from żēmė 'earth'.
- 6. medes-'ius'. U. meřs, mers 'ius', mersto 'iustum', mersuva 'iusta'; O. meddíss 'meddix', official title (cf. Festus "meddix apud Oscos nomen magistratus est"; Livy 26, 6, 13 "medix tuticus [O. meddíss túvtíks; see above, 2] qui summus magistratus apud Campanos est"; cpd. like L. iūdex from *iūs-dik-), medicim 'magistracy', meddikiai 'in the meddixship'; medicatinom 'iudicationem', medicatud 'iudicato'; Pael., Volsc., medix (Nom. Pl.); Mars. medis. Cf. L. modus, modes-tus, Grk. μέδομαι, etc.

- 7. ner-'vir, princeps', title of rank. O. nerum (Gen. Pl.), niir (Nom. Sg.); U. nerf (Acc. Pl.), nerus (Dat. Pl.). For related Sabine forms cf. Suetonius Tib. 1 "inter cognomina autem et Neronis adsumpsit, quo significatur lingua Sabina fortis ac strenuus"; Aul. Gellius 13, 23 "id autem, sive Nerio sive Nerienes est, Sabinum verbum est, eoque significatur virtus et fortitudo"; Lydus de Mens. 4, 42 "νερίκη γὰρ ἡ ἀνδρία ἐστὶ καὶ νέρωνας τοὺς ἀνδρείους οἱ Σαβῖνοι καλοῦσιν". Cf. Grk. ἀνήρ, Skt. nar-'man', O.Ir. nert 'strength'.
- 8. nessimo-'proximus'. O. nessimas (Nom. Pl.), nesimum (Gen. Pl.), nesimois (Abl. Pl.); U. nesimei 'proxime' (adv.). Cf. O.Ir. nessam 'nearest', etc. 'Cf. also O. nistrus 'propinquos'.
- 9. pert 'trans'. O. pert víam 'trans viam', am-pert 'not more than, dumtaxat'; U. pert spiniam 'trans columnam'(?). An extension of per. Umbrian also uses traf = L. $tr\bar{a}ns$.
- 10. postin 'according to'. O. pústin slagím 'according to the territory'; U. pusti kastruvuf 'per capita'(?) etc. An extension of *posti (early Latin poste).
- 11. pū̃r- 'ignis'. U. pir 'ignis', pure-to 'ab igne'; O. purasiaí 'in igniaria'. Cf. Grk. πῦρ, πυρός, O.H.G. fuir, fiur, Eng. fire, etc.
- 12. sēuo- 'totus'. O. siuom 'omnino'; U. seuom 'totum', sev-akne 'sollemne'. Cf. L. sō-lus, Goth. sē-ls(?).
- 13. tefro- 'burnt-offering'. O. saahtúm tefúrúm 'sacred burnt-offering'; U. tefra 'carnes cremandas', tefru-to 'ex rogo'. Probably from *tepsro-, related to L. tepor, Skt. tápas, etc.
- 14. treb-'habitare'. U. trebeit' versatur', tremnu 'tabernaculo'; O. trííbúm 'domum', tríbarakkiuf 'aedificium', tríbarakavúm 'aedificare', etc. Cf. O.Ir. treb 'dwelling-place', Lith. trobà 'building', Goth. paúrp 'field', Germ. Dorf, etc.
- 15. uero-'porta'. O. veru 'portam'; U. uerof-e 'in portam', etc. Ĉf. Skt. vr-'enclose', Goth. warjan 'ward off', Lith. veriù 'open, shut', vartai 'gate', L. aperiō, operiō.
- For other examples, see, in the Glossary, O. akenei, U. acnu;
- O. aíkdafed, U. eitipes; O. eehiianasúm, U. ehiato; O. eizo-, U. ero-; O. púmperiaís, U. pumpeřias.

- 16. Of the many words which are peculiar to Oscan (or Oscan-Sabellian) or to Umbrian, the following may be mentioned here.
- A. OSCAN. 1. aeteis 'partis', a]íttiúm 'partium'. Cf. Grk. alσa from aiτ-ιa.
 - 2. amnúd 'circuitu', amnud 'causa' (prepos.). From am- 'amb-' + suffix -no-. (Cf. kom-no-, 15, 4.) Perhaps contained in L. soll-emnis.
 - 3. comparascuster 'consulta erit', kú] mparakineis 'consilii'. From the same root as L. poscō, precor, but with the meaning which it has more commonly in other languages of 'ask, question' (Skt. prechámi 'ask', sam-prechámi 'consult', Germ. forschen, etc.).
 - 4. deiuā-'iurare' (deiuatud 'iurato', etc.). Denominative from *deiuo-'god'. Cf. Lettic diwati-s 'swear', from diws 'god'.
 - 5. egmo 'res', egmazum 'rerum', etc. Etym. uncertain (L. $ege\tilde{o}$?).
 - 6. eituam, eitiuvam 'pecuniam', eituas 'pecuniae', etc. Also Marruc. eituam 'pecuniam'. Etym. uncertain.
 - feihúss 'muros', feihúis 'muris'. Cf. Grk. τείχος, Skt. dehí 'heap, wall', etc. From the same root as L. fingō, figūra, etc.
 - 8. inim, inim 'et'. Also Pael. inim and inom 'et'. Related to L. enim, U. enom 'tum'.
 - 9. loufir 'vel'. In form a 3d Sg. Pres. Pass. from the same rootas L. libet. Cf. L. vel from volō, and U. heris 'vel' (15, 1).
- 10. puklum 'puerum, filium'. Also Pael. puclois 'pueris'. Cf. Skt. putrá-'son', and, from the same root, L. puer, Grk. παίς.
- 11. tanginom 'sententiam', Abl. Sg. tanginúd, etc. Cf. Festus "tongere nosse est, nam Praenestini tongitionem dicunt notionem. Ennius 'Alii rhetorica tongent'". Cf. Goth. pagkjan, Eng. think.

For other examples, see, in the Glossary, aflukad, ampt, amviannud, angetuzet, brateis, cadeis, karanter, deketasiúi, ehpeilatas, faamat, fertalis, heriiad, iúklei, iuvilu, lamatir, luisarifs, prupukid, serevkid, slagim, sullus, sverrunei, trutum, usurs, ualaemom, vereiiai. B. Umbrian. 12. anglaf, ancla oscines. Cpd. of klā-(L.clāmō),

as L. oscinēs from canō.

- 13. anouihimu 'induitor'. From *an-ouiō (Conj. IV); cf. L. ind-uō from *ind-ouō; Lith. aviù 'wear (shoes)'.
- 14. ape, appei 'cum, ubi' (always temporal). Probably from ad + pe (L. -que), and so in form like L. adque, atque.
- 15. arsmor 'ritus', arsmatiam 'ritualem', arsmahamo 'ordamini', etc. Etym. uncertain.
- 16. combifiā- 'nuntiare, mandare' (combifiatu, kupifiaia, etc.). Probably from fif-, the same root as in L. $f\bar{\iota}d\bar{\sigma}$, Grk. $\pi\epsilon i\theta\omega$, or possibly from fuf-, the same as in Grk. $\pi\nu\nu\theta\dot{a}\nu\sigma\mu a\iota$.
- 17. gomia 'gravidas'. Cf. L. $gem\bar{o}$, and, for meaning especially, Grk. $\gamma \acute{e}\mu\omega$.
- 18. nertru 'sinistro'. Cf. Grk. νέρτερος 'lower, nether'. According to Italic ideas $\bar{\imath}mus = sinister$.
- 19. purdouitu 'porricito', purditom 'porrectum', etc. From *por-douiō, with the root seen in L. duim, duam.
- 20. tuder 'finem', tuderus 'finibus', tuderato 'finitum', eturstahmu 'exterminato', etc. Etym. uncertain.
- 21. uend-'vertere' in ahauendu 'avertito', preuendu 'advertito'. Ĉf. Germ. wenden (Eng. wind).

For other examples, too numerous to mention, see the Glossary. Many of them are technical terms, often of obscure meaning.

- 17. Several words are used in a sense which is either unknown or nearly obsolete in Latin.
 - 1. O. kasit (L. caret) means 'decet' or 'oportet', e.g. fakiiad kasit 'faciat decet'. Cf. Eng. "it wants to be done", that is "it needs to be done".
 - 2. O. castrous, U. castruo (L. castrum), mean either 'fundus, landed property', or, more probably, 'head'.
 - 3. O. carneis, U. karu (L. carō), have the general meaning 'part, portion' (cf. also U. kartu 'distribuito'), e.g. maimas carneis senateis tanginud 'maximae partis senatus sententia', U. mestru karu fratru 'maior pars fratrum'. But Umbrian shows also the specialized meaning 'piece of flesh', e.g. aseçeta karne 'non secta carne'.

- 4. The forms corresponding to L. operor are used in the sense of 'make, construct', where Latin would employ faciō; e.g. O. ekass víass uupsens 'has vias fecerunt', trííbúm ekak úpsannam deded 'domum hanc faciendam dedit'; U. capirse perso osatu 'capidi fossam facito'; Pael. Herec. fesn. upsaseter coisatens 'Herculi fanum fieret curaverunt'.
- 5. O. ant (L. ante) means 'usque ad', e.g. ant púnttram 'usque ad pontem'.
- 6. U. com (L. cum), when postpositive, has developed a locative meaning, e.g. ueris-co 'at the gate', asa-ku 'at the altar'.
- 7. O. op, úp (L. ob), means 'apud', e.g. úp sakaraklúd 'apud templum', op toutad 'apud populum'.
- 8. $pr\bar{o}$ (L. $pr\bar{o}$ -) sometimes has a temporal meaning 'before', for which in Latin prae-, or oftener ante-, is used; e.g. U. prupehast 'ante piabit', O. prupukid 'ex antepacto, by previous agreement'.
- 9. U. emantur (L. emō) 'accipiantur' shows the original meaning 'take' seen in Latin compounds and in the particle em. Cf. also Festus "emere, quod nunc est mercari, antiqui accipiebant pro sumere". The specialized meaning 'buy' is found in emps on one of the short inscriptions, where it is perhaps due to Latin influence.
- 10. U. prever (L. prīvus) means 'singulis', e.g. numer prever 'nummis singulis'. Cf. Festus "privos privasque antiqui dicebant pro singulis". So also O. preinatud means 'reo, defendant' (as rarely in Latin, e.g. Livy 26, 3, 8, etc.), the single man among the many making up the assembly.
- 11. U. orto (L. ortus) is sometimes used in the literal sense of 'rising, standing up', e.g. urtes puntis 'the pentads rising'. Cf. Velius Longus (Keil, Gram. Lat. VII, 74) "oriri apud antiquos surgere frequenter significat, ut apparet ex eo quod dicitur: oriens consul magistrum populi dicat, quod est surgens"; Livy 8, 23, 15 "consul oriens".
- 12. U. tursituto, tursiandu (L. terreō), have the meaning 'drive off', which in Latin is only poetical; e.g. ponne iuengar tursiandu 'cum iuvencae fugentur'. But also tursitu 'terreto'.

- 13. U. couertu (L. convertō) always means 'return', with the intransitive meaning which is rare in Latin; e.g. enom traha Sahatam couertu 'tum trans Sanctam revertito'.
- 14. U. vurtus (L. vertō) has the meaning 'take a turn, change', which is rare in Latin (verterat fortuna, Liv. 5, 49, 5); e.g. pune naraklum vurtus 'cum nuntiatio mutaverit'.
- 15. U. ostendu (L. ostendō) has more nearly its etymological meaning than in Latin. It is used of 'stretching out', that is 'offering', fruits of the field or vessels; once of 'putting forward', that is 'choosing', an official.
- 16. O. urust (L. ōrō; see 21) is used in the technical sense of 'plead, argue'; e.g. com preivatud actud, —, in pon posmom con preivatud urust 'cum reo agito, —, et cum postremum cum reo oraverit'. Cf. Festus "orare antiquos dixisse pro agere"; Cic. Brut. 12, 47 "oravisse capitis causam"; Livy 39, 40, 6 "si causa oranda esset", etc.
- 17. U. comohota (L. commōtus) means 'brought, offered', in Di Grabouie, tio comohota tribrisine buo, ——, tiom subocau 'Iuppiter Grabovi, te commoto ternione boum, —— te invoco'. Cf. Cato, De Agric. 144 "Iane pater, te hac strue commovenda (MSS. also ommovenda) bonas preces precor".

Summary

18. The differences between Oscan-Umbrian and Latin are considerable. They are far greater, for example, than those between the Greek dialects, especially in the inflectional forms. But the resemblances with Latin, as compared with any other Indo-European language, are also notable, leaving no doubt that we have to do with two closely-related divisions of the same branch, sharing in many important characteristics which distinguish this among the various branches of the great family. This again is most marked in the inflectional system, so that we can maintain that the Latin inflectional system as a whole is also the Italic. The simplest proof of this lies in the fact

that the general classifications which have been found most suitable for the treatment of Latin forms apply also to Oscan-Umbrian. For such classifications, as, for example, that of the verb-forms into the Four Conjugations with scattering Irregular Verbs, are not mere arbitrary devices, for which others equally good might be substituted, but actually reflect the distribution of the linguistic material in a given language.

A few specific examples of these resemblances are: merging of the Instrumental with the Ablative; extension of the Ablative in -d from the o-stems to the other declensions; partial fusion of i-stems and consonant-stems; use of the Interrogative-Indefinite Pronoun as a Relative; fusion of Aorist and Perfect; formation of the Imperfect Indicative; formation of the Imperfect Subjunctive.

SPECIAL CHARACTERISTICS OF OSCAN

19. Oscan is the Gothic of the Italic dialects. In the conservatism and transparency of its vowel-system it is rivaled only by Greek of all the Indo-European languages.

Diphthongs are preserved intact in all positions; e.g. Dat.-Abl. Pl. -ais and -ois: L. -īs; — Loc. Sg. -ei: L. -ī; — Gen. Sg. of u-stems in -ous: L. -ūs; — deicum: L. dīcō; — múíníkeí: L. (com-)mūnis. So also Paelignian and Marrucinian.

The finer nuances of pronunciation are expressed by a highly-developed orthographical system. The qualitative difference between the long and short vowels (except the a-vowels), which is known to have existed in Latin, is more marked in Oscan than elsewhere. For example, the short e is denoted by the letter e, but long e has become so close in pronunciation as to be denoted by an i-character (in the Oscan alphabet by i, the sign of the relatively open i); e.g. estud: L. estō, but liqud, liquis: L. lēx, lēgātus. Note also pod, pid: L. quod, but estud, estud: L. estō; also (in the Oscan alphabet) pid: L. quid, but Abl. Sg. -id: L. -īd.

An original s between vowels, which becomes r in Umbrian as in Latin, remains a sibilant (also Paelignian); e.g. Gen. Pl. -azum: L. - \bar{a} rum. Final d after long vowels is preserved, as in early Latin, while in Umbrian it is lost even after short vowels (20).

A specifically Oscan (also Paelignian) process is the development of an anaptyctic vowel between liquids or nasals and mutes; e.g. aragetud 'argento'; — perek(aís) 'perticis': U. percam. Among other secondary changes are the doubling of consonants before certain sounds, and the change of u after a dental; e.g. kúmbennieís 'conventus', alttram 'alteram', tiurrí 'turrim'.

See also under 20.

SPECIAL CHARACTERISTICS OF UMBRIAN

20. Umbrian, as compared with Oscan, is characterized mainly by a number of secondary phonetic changes, of which the most important are:

Monophthongization of the original diphthongs in all positions; e.g. Dat.-Abl. Pl. -es, -ir, -er: O. -ois, L. -īs; — ote: O. aut, L. aut; — pre: O. prai, L. prae. So also Volscian.

Rhotacism, as in Latin, where Oscan preserves the sibilant; e.g. Gen. Pl. -arum: O. -azum.

Loss of final d; e.g. -po in suepo 'sive': O. pod, L. quod; — façia 'faciat': O. fakiiad. So also Volscian.

Loss of l before t; e.g. muta: O. molta, L. multa.

Assibilation of k before front vowels, as in late Latin and Romance; e.g. façia: O. fakiiad, L. faciat. So also Volscian.

Change of gutturals before t to i; e.g. aitu: O. actud, L. $agit\bar{o}$ (cf. French fait from L. factum).

Change of intervocalie d to a sound written rs (\check{r} in Umbrian alphabet); e.g. persi, $pe\check{r}i$: L. pede.

Change of ft (in part from pt) to ht; e.g. screhto 'scriptum': O. scriptus, L. scriptus.

Assimilation of secondary ps; e.g. osatu 'facito': O. úpsannam, L. operor.

Change of initial l to u; e.g. vutu: L. $lavit\bar{o}$.

Among other Umbrian peculiarities are:

Development of original final -ns to -f, for which Oscan has -ss; e.g. U. eaf 'eas': O. víass 'vias'. So also Marrucinian.

Retention of intervocalic rs; e.g. tursitu 'terreto'.

Ending of Abl. Sg. of consonant-stems in -e, as in Latin, while Oscan has $-\bar{o}d$ after o-stems; e.g. natine 'natione': O. tan-ginud 'sententia'.

Ending of Dat.-Abl. Pl. of consonant-stems in -us, after u-stems, where Oscan has -iss, -is, after i-stems; e.g. fratrus 'fratribus' (as if L. *fratrubus): O. ligis 'legibus'.

Presence of pronominal forms with sm; e.g. pusme 'cui', esmei 'huic': Skt. kásmāi, ásmāi, etc.

Imperative futu, contrasted with O. estud, L. $est\bar{o}$ (also Volsc. estu).

Perfect in l and nki, contrasted with O. tt-Perfect (13).

Passive endings both -ter and -tur, Oscan having only -ter (13).

Use of et as the usual connective, as in Latin, for which Oscan has inim (16, 8).

Arrangement of the proper name, which is praenomen, father's name, gentile, while in Oscan it is the same as in Latin.

BORROWED WORDS

21. The borrowed words consist mainly of Greek words in Oscan, introduced from the neighboring Greek colonies. These are mostly names or epithets of divinities, such as Appelluneis (Dor. 'A $\pi \epsilon \lambda \lambda \omega \nu$); — Evklůí (probably E $\nu \kappa o \lambda o s$, an epithet of Hermes in Magna Graecia); — Herekleis ('H $\rho a \kappa \lambda \hat{\eta} s$, with syncope of the a and shortening of the vowel before r + consonant, whence, with anaptyctic vowel in different positions, come both the Oscan and Latin forms; the Oscan form, in contrast to the Latin, is an o-stem, Dat. Sg. Hereklůí; cf. also Vest. Herelo); — Piístíaí (Πίστιοs; cf. Ze ν s Πίστιοs for Iuppiter Fidius in Dionys. Hal. 4, 58; the ií of the Oscan is perhaps due to contamination with some such form as Piíhiúí); — Herukinaí

('Ερυκίνη; Herentateí Herukinaí corresponds to the Sicilian 'Αφροδίτη 'Ερυκίνη, the worship of whom as Venus Erycina was also introduced among the Romans in the second Punic war; cf. Livy 22, 9, 10); — Meeílíkiieís (Μειλίχιος; eeí is merely the result of an attempted correction of ee to eí); — Arentika[i (Hesych. 'Αράντισιν ' Ἐρινύσι, Μακεδόνες).

But there are also a few common nouns of the same class as those introduced into Latin at the same period, such as the savrúm ($\theta\eta\sigma av\rho\delta s$; the Oscan form is neuter), kúíníks ($\chi o\hat{\iota}v\iota\xi$), passtata ($\pi a\sigma\tau as$), tiurrí, with L. turris ($\tau \dot{\nu}\rho\rho\iota s$); limu famem is also suspicious, since cognates of Grk. $\lambda \bar{\iota}\mu\delta s$ are otherwise unknown in Italic.

Latin influence shows itself in some official titles, as O. aidil 'aedilis' (the d of L. $aed\bar{e}s$ comes from dh, which would be f in Oscan); — O. kenzsur (cf. also Kenssurineis) beside the regular keenzstur, censtur 'censor' (see 244, 1, a); — probably O. kvaisstur, U. kvestur 'quaestor', though there is a possibility that the initial was not q_a^u , but $\hat{k}u$, and that this gives O.-U. ku, not p (141, a).

O. urust is best taken as a borrowed legal term (see 17, 16), since we should expect *uzust (see 112) as a cognate of L. $\bar{o}r\bar{o}$ according to what is still the most probable derivation of the latter, namely from $\bar{o}s$.

Some proper names show Latin or half-Oscanized Latin forms, as Niumerius', for which the genuine Oscan form would be *Niumsiis (cf. the praenomen Ni]umsis).

O. Mener, if, as is probable, an abbreviation of a form corresponding to L. *Minervium*, shows that the Oscan, like the Etruscan, name of the divinity was borrowed, together with the cult, from a dialect in which rhotacism took place (* $Menes-u\bar{a}$). Though the cult of Minerva may have originated among the Faliscans, as many suppose, it probably reached the Oscans through the medium of the Romans, but at a time when the Latin form was still Menerva (CIL. V 703, 799, VI 523, etc.) Pael. Minerua is likewise borrowed.

U. vinu 'vinum' (and O. Viínikiís 'Vinicius', if related) must be borrowed from vīnum, if the latter is from *ueino-, earlier *uoino- (oîvos). For the change of uoi to uei is probably Latin only (U. uocu: Grk. Foîkos?), and even if it were Italic, we should expect then U. *venu (65).

A possible example of borrowing from one of the minor dialects is U. felsva. See 149, b.

PHONOLOGY

ALPHABET AND ORTHOGRAPHY

OSCAN

22. The native Oscan alphabet consists of the following twenty-one characters:

П, а	□, v	١, 1	≥, s	
g, b	I, z(=ts)	И, т	T, t	
), g	∃ , h	И, п	∨, u	
Я, ф	l, i	П, р	8, f	
Э, е	Ж , k	a, r	۴(۲ k), í	Ÿ, ú

The last two letters are simply differentiations of the ordinary characters for i and u, and are not found in the oldest inscriptions.¹ They are commonly transcribed by i and i, but sometimes by i and i, the latter also by o. The i is used to indicate an open i-sound, representing etymologically a short i (44), an \bar{e} (41), a short e in hiatus (38, 1), and occurring regularly in i-diphthongs (61, 1) and in the combination i representing \bar{i} (47). The i denotes an o-sound, the character o being lacking in both Oscan and Umbrian.

Double consonants are indicated in the writing, except in some of the oldest inscriptions.

The length of vowels is often shown by a doubling of the vowel, as in assas: L. $\bar{a}ra$; — Fluusaí: L. $Fl\bar{o}ra$.

23. The Latin alphabet of the Tabula Bantina is of the usual type. z does not denote the sound ts as in the native alphabet, but the voiced sibilant (English z in zero), which in

¹ The occurrence of \vdash on a few Boeotian inscriptions (CIGS. I 1888, 1943, 2456), representing an open ι which comes from original $\epsilon\iota$ or from ϵ before vowels, but in the usual Boeotian orthography is not distinguished from ι , suggests that it may not be an Oscan invention after all, but possibly borrowed at a comparatively late period from some type of the Chalcidian alphabet in southern Italy.

the native alphabet is not differentiated from s; e.g. Gen. Pl. -azum (-asúm).

Double consonants are only rarely indicated, and the doubling of vowels to denote length is unknown.

24. The Greek alphabet, used in a few inscriptions of Sicily and southern Italy, is of the Tarentine-Ionic type, such as appears in the Heracleian tables. This is the normal Ionic with the addition of F = h and C = v. Neither η nor ω is used to indicate quantity.

According to the system of orthography represented in no. 62 and some others, $\eta\iota$ and $\omega_{\mathcal{F}}$ are used to represent the diphthongs ei and ou, as in Gen. Sg. $-\eta\iota s = -eis$, $\tau\omega_{\mathcal{F}}\tau o = touto$; while $\epsilon\iota$ and ov represent monophthongs, the former the open i-sound, the i of the native alphabet, the latter the u-sound of original \bar{o} , e.g. $\mu\epsilon\delta\delta\epsilon\iota\xi = \text{meddiss}$, $ov\pi\sigma\epsilon\nu s = \text{uupsens}$.

But in some inscriptions $\epsilon \iota$ and $o \nu$ are used for diphthongs, and original \bar{o} then appears as o, e.g. $F \epsilon \rho \sigma o \rho \epsilon \iota$ 'Versori' (contrast the last two syllables with those of $\Lambda \pi \pi \epsilon \lambda \lambda o \nu \nu \eta \iota$, no. 62), $\Lambda o \nu \kappa a \nu o \mu$ 'Lucanorum' (cf. Lúvkanateís; for the last syllable contrast $M a \mu \epsilon \rho \tau \iota \nu o \nu \mu$).

- a. The spelling $\Delta \iota ov_f \epsilon \iota$ (cf. Diúveí, Iúveí) is probably due to the fact that the syllabic division was not clear. Cf. U. auuei beside usual aueif 'avis'.
- b. A character S, occurring in Sesties and avaSaket (nos. 65-66), is of disputed value, but is probably the equivalent of Oscan 8. Cf. also the coin-legend \geq EN \leq EP beside Fensernu.
- c. In Numpolinis = Niumsies, the $\sigma\delta$ is probably connected in some way with the dialectic use of $\sigma\delta$ for the usual ζ , though in the latter case it represented the actual pronunciation.

UMBRIAN

25. The native Umbrian alphabet consists of the following nineteen characters:

A, a	$\mathbf{z} = \mathbf{t} \mathbf{s}$	$M(\Lambda)$, m	↑(Y), t
8, b	O, h	И, п	∨, u
Ч, ř	l, i	1, p	8, f
3 , e	Ж , k	d, r	d, ç
1, v	٧, 1	≥, s	

There are no signs for d and g, the letters t and k answering for both surds and sonants.

The \P represents a sound which comes from an original intervocalic d and appears in the Latin alphabet as rs. For convenience it may be pronounced simply as rs, but probably it was a sort of sibilant r, like the Bohemian \check{r} , from which comes the usual transcription \check{r} . It is also transcribed, with more regard for its origin than for its pronunciation, as \check{q} or \check{q} .

The \exists , transcribed ς , also sometimes \grave{s} , represents a sibilant derived from k before a front vowel.

Double consonants are not indicated. Vowel-length is sometimes shown by an added h, e.g. kumnahkle with suffix -āklo-.

- a. A by-form for m, \wedge , occurring also in Etruscan, is regularly employed in Table V. The san, M, occurs twice for s, and the theta, \odot , is twice used for t. The appearance of p in place of f in kutep, vitlup, turup (I b 3, 4), for which there is no likely phonetic explanation, is perhaps to be accounted for by the existence of a by-form for f resembling the form of p (cf. Faliscan \uparrow).
- 26. The Latin alphabet is of the usual type, but with no z. The secondary sibilant, the \exists of the native alphabet, is denoted by \grave{S} , which is transcribed \grave{s} . q is used before the vowel u, as often in Latin inscriptions (pequnia); e.g. pequo, dequrier, peiqu. Double consonants are rarely indicated. Vowellength is shown by an added h, by vowel +h + vowel, rarely by doubling of the vowel; e.g. spahmu, spahamu, eetu.

Note. For the probable origin of the use of an added h to denote vowellength, which is characteristic of Umbrian of both alphabets, see 75. The use of vowel +h + vowel is probably a combination of this with the double-vowel method.

Relation of the Alphabets

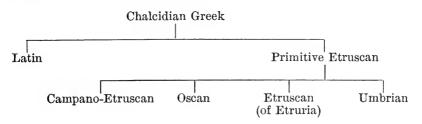

27. Both the Oscan and Umbrian native alphabets are derived from the Greek alphabet of the Chalcidian type, through the medium of the Etruscan. That they are not derived directly from the Greek is shown by the absence of the letter o, as well as by other evidence. At the same time, the presence of 8 points to an earlier type than that of the extant Etruscan inscriptions. Differences between Oscan and Umbrian may be attributed to both local and chronological variations of Etruscan, as well as to divergent development after borrowing. It is extremely probable that the Oscan development was influenced in some particulars by the neighboring Greek.

The fact that λ , g, is present in Oscan, but not in Umbrian, is sometimes explained by the supposition that the Oscan alphabet was borrowed earlier than the Umbrian. But at all periods Etruscan possessed both characters, λ and λ , used as by-forms for the surd. Umbrian took only λ , possibly because this was preferred in the local type from which it was derived. Oscan took over both characters and differentiated them again. That in this process the original value of the signs in Greek was restored, instead of the opposite (see following), might be accidental, but is very likely due to the influence of Campanian Greek usage.

The apparent transposition of the signs for d and r is accounted for as follows. The Etruscans had no sound d, but used $\mathbb Q$ as a by-form of $\mathbb Q=r$, in fact preferred it, as less likely to be confused with $\mathbb Q=p$; and with this value it was adopted by the Oscans and Umbrians. But the old signs for r were also taken over and employed for the sound d, — $\mathbb Q$ by the Oscans, $\mathbb Q$ by the Umbrians. This early Umbrian use of $\mathbb Q$ as d is seen in some of the minor inscriptions. But with the change of intervocalic d the letter was retained for the new sound, that which we transcribe $\mathfrak f$, and thenceforth the unchanged d was expressed by the letter $\mathfrak f$.

The origin of the sign 8, f, is disputed. Possibly it is a rounded form of \boxminus , used first in combination with \Box , and then alone, as vice versa in Latin first \sqcap , then \sqcap .

The relation of the alphabets may be seen from the following1:

Notes on Orthography

- 28. Résumé of methods of indicating vowel-length. The length of a vowel may be indicated:
- 1) by doubling of the vowel sign, in Oscan of the native alphabet, rarely in Umbrian of the Latin alphabet. See 22, 26.
- 2) by vowel +h, in Umbrian of both alphabets. See 25, 26.
- 3) by vowel +h + vowel, in Umbrian of the Latin alphabet. See 26.

¹ From Conway's Italic Dialects, Part II, which also contains a comparative table of the alphabets with the variant forms of the letters.

But oftenest there is no designation of the length, and in such cases it is not customary to supply marks of quantity, as is done in the case of Latin, where metrical usage furnishes a criterion lacking in the dialects. For example, we write O. aasas, eituas, U. totar, though in this case there is no doubt of the vowel-length in the last syllable (Gen. Sg. ending -ās).

In Oscan the designation of length is, with a few exceptions, confined to root-syllables.

29. Use of ei, ei, in Umbrian. While in Oscan the digraph ei, ei, uniformly designates the diphthong ei, its uses in Umbrian, where the original ei had become a monophthong, are various. Sometimes it designates a secondary diphthong, the i of which comes from a guttural, e.g. teitu, deitu 'dicito' (143).

But it is frequently used in the Latin alphabet, and rarely in the native, much as in Latin inscriptions of the first century B.C., as one of the various spellings of a monophthong. It is notably frequent in the first thirty-odd lines of Table VI a. Oftenest it stands for original $\bar{\iota}$, e.g. screihter (L. scrīptus); sometimes for the close \bar{e} resulting from oi in final syllables (67, 2), e.g. Dat.-Abl. Pl. uereir, or from original \bar{e} , e.g. nesimei 'proxime' (adverb in $-\bar{e}$), heriiei (Perf. Subj. with mood-sign \bar{e}). There are also a few reasonably certain instances of its use for a short i, namely Dat.-Abl. Pl. aueis (*-ifs), Acc. Sg. Fisei (-im), 3d Sg. Pass. hertei beside herti, herter (-tir from -ter; see 39, 2).

Puzzling is the use of ei in neip, neip 'nec' (with neiřhabas; see 84), in eikvasese, eikvasatis, of uncertain meaning, and in eiscurent 'arcessierint'. For eitipes see 264, 2.

a. For eikvasatis and eikvasese connection with L. aequus is plausible; and for eiscurent the comparison with O.H.G. eiscon (Germ. heischen), Lith. jëszkoti 'seek', etc., pointing to a Present *ais-skō (Skt. icchāmi from *is-skō with reduced grade of root) is the most probable of all suggestions offered. Yet according to the usual orthography we should expect e for the open \bar{e} coming from ai (63). It is conceivable however that we have here isolated survivals of archaistic spelling, representing not the earliest period when ei was still pronounced as a diphthong, but a second period, in which the spelling ei was retained for the sound resulting from ei and extended to the same sound resulting

from ai (both ei and ai resulted in an open \bar{e} ; see 63, 65). Cf. early Latin $deic\bar{o}$ and $inceid\bar{o}$.

The ordinary use of ei for $\bar{\imath}$, close \bar{e} , etc., as described above, cannot be the result of any such orthographical development within the Umbrian, since it does not appear where the sound was originally ei. It must rather be regarded as borrowed from contemporary Latin spelling.

- b. For neip, neip we might also assume archaistic spelling (cf. O. neip), but its almost uniform appearance in this particular word (neip, neip 9 times, once nep) would remain to be accounted for. A suggested derivation from $*n\bar{e}$ (from $*n\bar{e}$, O. ni, or *nei, O. nei) + particle $-\bar{\imath} + p$ would explain the spelling, as representing a genuine diphthong, but for various reasons seems improbable.
- 30. While Oscan orthography, barring the inconsistency in the designation of vowel-length and a few other, mostly local, variations, is remarkably uniform, Umbrian orthography is as diverse as possible. Various spellings of the same sound are used, sometimes wholly promiscuously, sometimes with a marked preference for one spelling in certain portions of the tables or in certain classes of forms. Among the commonest variations are the following:
- 1. Variation between e and i. In the great majority of instances this occurs where the sound lies between e and i, or, more correctly, between the extremes of an open e and a close i; that is, it is either the open i from original short i (45), or the close \bar{e} from original \bar{e} (42) or from oi in final syllables (67, 2). The spelling e is relatively more frequent in the native than in the Latin alphabet. The use of e for closed \bar{i} from original \bar{i} , or, vice versa, of i for the open e from original short e, or for open \bar{e} from original ai or ei, is rare. The variation between e and i corresponds then in general to the Oscan use of i.
 - 2. Variation between ei and e or i. See 29.
- 3. Variation between o and u (only in the Latin alphabet, of course, since the native alphabet has no o), mostly in the case of original \bar{o} (54), sometimes for short o, especially before r (51).
- 4. Variation between a and u (in the native alphabet only; in the Latin alphabet always o) for the rounded a (as in English call), coming from final $-\bar{a}$ (34).
- 5. Variation in the designation of vowel-length, e.g. ee, eh, or ehe (in native alphabet only eh), or, oftenest, simply e, e, without indication of length. See 25, 26, 28.
- 6. Variation between p and b in the native alphabet, e.g. habina, hapinaf. It is doubtless owing to the double value of t and k, which answer for both surds and sonants, that p is also used not infrequently for b.
- 7. Variation between single and double consonants. Double consonants are not indicated in the native alphabet, and only occasionally in the Latin.

- 8. Presence or absence of h. The weak pronunciation of h in Umbrian is responsible for considerable inconsistency in spelling, just as is the case in Latin. See 149, a. The use of h as a sign of hiatus is common to both Oscan and Umbrian, e.g. O. stahint 'stant', U. ahesnes 'ahenis'.
 - 9. Presence or absence of n before a consonant (108, 1).
 - 10. Presence or absence of r before s (115, 116).
 - 11. Presence or absence of most final consonants (164, 9).
- 31. An important difference between the orthography of the native alphabets and that of the Latin alphabet, in both Oscan and Umbrian, is the following. The glide sound which naturally intervenes between i or u and a following vowel is regularly expressed in the native alphabets, but nearly always omitted in the Latin alphabet, as in the spelling of Latin. So U. triia, but trio (L. tria); U. tuves, but duir (L. duo); O. eitiuvam, but eituam.
- a. ii, i. In Umbrian, of words occurring in both spellings the examples are: triia (9), trio (2); heriiei (1), heriei, herie (4); Atiieřiur etc. (17), Atiersur etc. (5); Klaverniie (2), Claverniur (1); Vehiies (2), Vehier (4); in all, 46 occurrences with no exception to the distribution of the two spellings as stated. In Oscan too the spelling ii is employed consistently, as in the oblique cases of names in -iis, contrasted with i in the oblique cases of names in -is; e.g. Dekkieis Rahiieis Gen. Sg. of Dekis Rahiis (174).

Since ii is so evidently the normal spelling in the case of vowel i, there is the strongest presumption that, where the spelling in the native alphabets is simply i, this must represent something different, namely the consonantal i. And this is often corroborated by other evidence, such as doubling of consonants in Oscan, occasional omission of the i in Umbrian, etc. (100, 3).

Yet some exceptions must be admitted. In O. Dekkviarim and U. tekvias i cannot possibly represent a consonantal i; O. Iúviass is not to be separated from Iúviia; in O. víú, U. via, vea, consonantal i is of course impossible, and that the vowel is other than original i (cf. L. via) is improbable; consonantal i is also impossible in U. arvia, and improbable even after \mathbf{v} preceded by a vowel, as in aviekla etc. It is perhaps for the very reason that there would be no ambiguity, that i is so often used in place of i after \mathbf{v} .

A different case is that of the Oscan i coming from original e before a vowel (38, 1). Here too in the earliest inscriptions the spelling is ii, but after the introduction of the character i this alone is used; e.g. iiuk, later iuk 'ea'.

b. uv, u. In Umbrian the contrasting examples are: tuves etc. (5), duir (2); kastruvuf (4), castruo (11); prinuvatur (5), prinuatur (8); vatuva (6), uatuo (6); in all 47 occurrences with no exception to the distribution of the two spellings as stated. But we find saluuom, saluua, once each beside 24 examples

of saluom etc., and tuua 'tua' once beside 18 examples of tua, tuer (once also touer). The omission of v in purtuetu is doubtless accidental, and aruvia beside usual arvia is probably an engraver's error. In Oscan, v is used instead of uv in sakrvist beside sakruvit, in eftiv. for eftiuv(ad), and probably in minive (no. 31 b). So possibly in U. iveka 'iuvencas', though here the omission of u seems much stranger, and many assume an actual phonetic change of juy- to iy-.

HISTORY OF THE SOUNDS 1

VOWELS

a

- 32. 1. a in initial syllables remains unchanged, as in Latin. So O. actud: L. agō; U. ager: L. ager; O. allo: L. alius; O. patir, U. patre: L. pater; O. fakiiad, U. façia: L. faciō; O. castrous, U. castruo: L. castrum; O. ant: L. ante.
- 2. Final a is also unchanged, as in the Umbrian Vocatives *Tursa*, *Iouia*, etc. See 169, 5.
- 3. Likewise in medial syllables, where in Latin a has been weakened to i or e, it is regularly preserved. So O. Anterstataí: L. *Interstita (cf. Praestitia); O. tríbarakavúm 'aedificare': L. (co)-erceō; U. antakres: L. integer; U. procanurent: L. (oc)-cinuī; U. ařkani 'cantum': L. *accinium; U. tuplak 'furcam' (?): L. duplex (cf. Grk. δίπλαξ). See 85.

¹ The arrangement of the material and the choice of headings is dictated by considerations of convenience. Since we are dealing primarily with the relations of the sounds of the dialects to one another, rather than with their relations to the sounds of the other Indo-European languages, the material is arranged with reference to what belongs together from the Italic point of view. Thus, under the heading **a** is considered the history of Italic α , regardless of its various I.E. sources $(\alpha, \partial, \text{etc.})$; en from I.E. n has the same history as original en, and need not be treated separately; similarly with or, ol, from g, l, ou from eu, etc. Only in the treatment of Vowel-Gradation is there any necessity of reverting to the I.E. vowel-system. But the headings do not always represent the Italic sounds. It is often simpler to take the I.E. sounds as the starting-point, as, for example, in the case of the sonant aspirates, dh, bh, etc., for which the precise stage of development reached in the Italic period is not in all cases certain. Or, again, it may be desirable to discuss in one place the history of a sound or group of sounds, which is partly of Indo-European, partly of Italic, and partly of still later origin, as, for example, in the case of ns. In general, the author has not hesitated to sacrifice consistency to convenience.

30

4. But a weakening in the direction of u, where a labial consonant precedes or follows, is seen in a few words. See 86.

ā

- 33. \bar{a} , except when final, remains unchanged, as in Latin. So O. fratrúm, U. fratrum: L. $fr\bar{a}ter$; O. Maatreís, U. Matrer: L. $m\bar{a}ter$; O. aasas, U. asam: L. $\bar{a}ra$; Abl. Sg. of First Decl., O. toutad, U. tota: L. $-\bar{a}$; suffix $-\bar{a}no$ -, O. Abellanús, U. Treblanir: L. $R\bar{o}m\bar{a}nus$.
- 34. Final \bar{a} , which in Latin is shortened, preserves its quantity, but is changed in quality to a rounded sound like the a of English call. In Oscan it went so far in the direction of \bar{o} that it is never denoted by the letter a, but always by $\hat{\mathbf{u}}$, o, o, or, rarely, by \mathbf{u} , u. In Umbrian the sound is written both \mathbf{a} and \mathbf{u} in the native alphabet, but always o in the Latin. Examples are the forms of the Nom. Sg. of \bar{a} -stems, which ended in \bar{a} , as shown by Greek, Sanskrit, etc., and of the Nom.-Acc. Pl. Neuter, in which the \bar{a} , belonging properly to o-stems, was extended in the Italic period to other stems.

OSCAN. víú 'via', fíísnú 'fanum' (Acc. fíísnam), iiu-k, íú-k, io-c 'ea', molto 'multa', allo 'alia', touto 'civitas'; — comono 'comitia', teremenniú 'termina', petiru-pert, petiro-pert 'quater' (192, 2).

UMBRIAN. muta, mutu 'multa', panta 'quanta', etantu 'tanta'; — veskla, vesklu 'vascula', vatuva, vatuvu, uatuo 'exta'(?), proseseto 'prosecta', atru, adro 'atra'. See also 235, 236, 2, 237, 300, 9.

- 35. In Umbrian this rounding of the \bar{a} takes place also before final -ts (from -to-s or -ti-s by vowel-syncope). So pihaz, pihos 'piatus', kunikaz, conegos 'conixus' (in form as if L. *cōni-gātus), Casilos 'Casilas' (Dat. Casilate), -vakaz, -uacos 'vacatio, intermissio' from *uakāt(i)-s.
- a. A similar variation in spelling, which can hardly be separated from the phenomenon just described, is seen in Prestate, Prestote, and Tesenakes, Tesenocir. The former word, although L. Praestitia suggests * prae-stătā-, may be from a by-form * prae-stātā- (cf. L. prae-stātus beside prae-stitus), and for

the latter word a suffix $-\bar{a}ko$ - is in itself more probable than -ako-, the existence of which is doubtful. But the explanation is difficult, since elsewhere there is no indication of a change of \bar{a} except under the conditions described above. It is possible that in the later Umbrian even the \bar{a} of medial syllables changed slightly in the direction of \bar{o} , but not enough to affect the usual spelling. Yet it is strange that the o is so consistently employed in these two words, and never found as a variant in the great majority of words containing \bar{a} . But to regard the o as standing for short a only increases the difficulty. Such a weakening of a where there is no contiguous labial consonant (86) is unsupported and unlikely.

A somewhat different, but equally difficult, case is subotu if this is the same word as subahtu 'deponito' with secondary \bar{a} (121, 75).

е

- 36. 1. e generally remains unchanged. So O.edum: L. edō; O. ezum, est, estud, U. erom: L. esse, etc.; O. destrst 'dextra est', U. destram-e: L. dexter; O. mefiaí: L. medius; U. ferest, fertu: L. ferō; O. aragetud: L. argentum.
- 2. e also remains before l + consonant, or final l, where in Latin it becomes first o, then u. So U. pelmner: L. pulmentum; (also U. veltu 'deligito', eh-velklu 'sententiam', but in these uel is from uele: L. volt, vult); O. famel: L. famul; U. sumel: L. simul (early inser. semol).
- 3. e also remains generally in medial syllables, where in Latin before a single consonant it is weakened to i. So U. taçez, tasetur: L. tacitus; U. maletu: L. molitus; O. Genetaí: L. genitus.
- 4. But before a labial in medial syllables a weakening occurs, resulting, just as in Latin, sometimes in u, sometimes in i. See 86.
- 37. A change of e to o is seen in *pompe 'quinque' (O. pumperias, U. pumperias '*quincuriae', O. pomtis 'quinquiens') from * $k^{u}_{e}enk^{u}_{e}e$ (150), where it seems due to the position between two k^{u}_{s} 's.
- a. The combination sue which becomes so in Latin (soror from *suesōr, etc.) remains unchanged in O. sverrunei (96), but Umbrian shows the same change as Latin in sonitu: L. sonō, from *suen- (Skt. svan-).

i for e

- 38. OSCAN. 1. Before another vowel, e becomes an open i and is invariably denoted by an i-character (i in the native alphabet, earlier ii; see 31, a). Compare Ital. mio from L. meus, cria from L. creat, etc. So iiu-k, iú-k, io-c 'ea', ion-c 'eum', ius-c, iussu 'iidem': L. ea etc. (cf. also Marruc. iaf-c 'eas'); fatíum 'fari': L. fateor; putiiad, pútiad 'possit', as if L. *poteat; turumiiad 'torqueatur', as if L. *tormeat; Tianud 'Teano,' Loc. Sg. Tiianei; Tiiatium 'Teatinorum'.
- 2. Before r the e had a closer pronunciation than usual, as is shown by amiricatud '*immercato', with which may be compared rustic Latin Mircurios, stircus, etc.; further by Tirentium 'Terentiorum' and Virriis 'Verrius'. But the change was so slight as to be commonly ignored in the spelling (cf. pert, perek., pumperias, etc.).
- 3. Tintiriis, if, as probable, from *Tinktrio- and related to L. tinguō, tīnctus (Grk. $\tau \acute{e}\gamma\gamma\omega$), is evidence of the same change as occurs in Latin before n+ guttural.
- 4. In nistrus 'propinquos' beside nessimas 'proximae' etc., the ${\bf i}$ is probably only a misspelling.
 - 5. For ist beside est 'est', see 217, 2.
- 39. UMBRIAN. 1. Before another vowel e had a relatively close pronunciation, as shown by farsio, fasiu 'farrea', tursiandu 'terreantur', and by iepi, iepru, in case these are from the stem eo. But the change did not go so far in the direction of i as in Oscan, and the spelling is regularly e, e.g. eam, eaf, eo, etc.
- 2. From ostensendi for *ostensender (ending -ter, 238, 1) and herti (4 times), hertei (once), beside herter, herte, we may assume that e before final r had a close pronunciation verging on i.
- 3. In *cringatro*, krikatru 'cinctum' beside krenkatrum, from *krengh- (O.Eng. hring, O.Bulg. kragŭ 'circle'), we have a change of e in the direction of i, as in Latin before n + guttural (tinguō, lingua, etc.). See 38, 3.

- 4. In isir 'his' beside esir, iso, issoc 'ita' beside eso, esoc, isec, isek 'item', isunt 'item', the i is perhaps due to a partial contamination of the stems esso- and i-. But see the following.
- 5. The single occurrence of tasis against 21 examples of tases etc., and of vistica against 18 examples of vestica, vesticia, etc., show that in the following forms, which occur but once each, we may have, accidentally, the abnormal rather than the normal spelling: ticit: L. decet;—iseceles 'insectis', with i for e(n)-;—vacetum-i se 'in vitiatum sit'(?) with i for postpositive e(n). But it cannot be wholly accidental that in all these cases (cf. also isir etc., above) the vowel is followed by a sibilant. Apparently the i-quality of the sibilant has had some effect on the preceding e—but so slight that in most words it is never shown in the spelling.
- 6. In U. vitlu 'vitulum', uitlu, etc. the i is Italic (L. vitulus, also O. Víteliú 'Italia'), though probably from original e ('yearling'; cf. L. vetus, Skt. vatsá-'calf'). Where and how the change came about is unknown.

ē

- 40. \bar{e} had a closer pronunciation in Latin than the short e, as we know from its development in the Romance languages and from statements of the grammarians. It was the French \acute{e} of $\acute{e}t\acute{e}$ rather than the \grave{e} of $m\grave{e}re$. It probably had this relatively close pronunciation in the Italic period, and in Oscan and Umbrian progressed still further in the direction of $\bar{\imath}$.
- 41. In Oscan it has gone so far that we may speak of a change to $\bar{\imath}$, since it is invariably denoted by an $\bar{\imath}$ -character. This $\bar{\imath}$ was a relatively open $\bar{\imath}$, indicated in the native alphabet by $\bar{\imath}$ or $\bar{\imath}$, being thus distinguished from original $\bar{\imath}$, which was close.\(^1\) Examples: ligud 'lege', ligatúis 'legatis': L. $l\bar{e}x$, $l\bar{e}g\bar{a}$ -tus; fíísnú, fíísnam, físnam 'fanum': L. $f\bar{e}stus$, $f\bar{e}riae$ (99, 1); líkítud, licitud 'liceto': L. $lic\bar{e}t\bar{o}$; hipid 'habuerit', from * $h\bar{e}p\bar{e}d$, belonging to the same Perfect-type as L. $c\bar{e}p\bar{\imath}$, $l\bar{e}g\bar{\imath}$, and with the Subjunctive-sign \bar{e} ; fusíd 'foret', h]erríns 'caperent' with the same mood-sign \bar{e} as the Latin Imperfect Subjunctive, but without the shortening seen in L. -et, -ent (78).

¹ This and similar statements as to the distinction in use between i and i refer to the normal Oscan orthography. It must be remembered that the i is lacking in the oldest inscriptions, and also that after its introduction it was so carelessly employed in some inscriptions, mostly those of Capua, that their evidence in this regard is to be ignored.

- a. An \bar{e} which is the result of contraction in the Italic period has the same development as original \bar{e} . Thus tris: L. $tr\bar{e}s$, from * $tre\bar{e}s$; húrtín 'in horto' from * $horte\bar{e}-en$. See 82, 1.
- b. But an \bar{e} resulting from some later process of vowel-lengthening retains the quality of the short e, and is not written i; e.g. keenzstur, censtur, eestint, etc. (73, 77).
- 42. In Umbrian the spelling i occurs frequently, especially in the Latin alphabet, but e is far more common.

The Imperatives of the Second Conjugation always have i in the Latin as against e in the native alphabet, but this distinction does not hold for other words. Thus habitu, habetu: L. $hab\bar{e}t\bar{o}$; — tursitu, tusetu: L. $terr\bar{e}t\bar{o}$; — filiu, feliuf 'lactentes' from the $f\bar{e}$ - of L. $f\bar{e}$ -mina; — plener, plenasier: L. $pl\bar{e}nus$; — rehte: L. $r\bar{e}ct\bar{e}$, earlier * $r\bar{e}ct\bar{e}d$. In a few cases the spelling ei occurs; e.g. herilei 'voluerit' with the Subjunctive-sign \bar{e} ; — nesimei 'proxime', adverb in \bar{e} like rehte; sei-(podruhpei) 'seorsum': L. $s\bar{e}d$ -.

Evidently \bar{e} in Umbrian had a very close pronunciation, but had not gone as far in the direction of \bar{i} as in Oscan.

i

- 43. *i* remains an open *i*. This open quality is shown by its designation *i* in the Oscan alphabet, and for Umbrian by the frequent spelling *e* (30, 1). Final *i*, unless dropped, remains *i* in Oscan, but becomes *e* in Umbrian, as in Latin. Thus U. ute, ote 'aut': O. auti; U. sakre, sacre, etc. (Nom.-Acc. Sg. N. of *i*-stems).
- 44. OSCAN. Examples: dadíkatted 'dedicavit': L. dēdicō;
 meddíss, meddis 'meddix', Gen. Sg. medíkeís, Nom. Pl. meddíss,
 μεδδειξ (for ει see 24; compare also εινειμ = inim), a compound
 of dik-, like L. iūdex, iūdicis (15, 6); líkítud, licitud 'liceto':
 L. liceō; uincter 'convincitur': L. vincō; tiurrí: L. turrim;
 pís, pis, píd, pitpit: L. quis, quid, etc.; suffix -iko, e.g. túvtíks 'publicus', toutico 'publica'.
- a. When the consonantal i intervening between the vowel i and another vowel is expressed in the writing, as is nearly always the case in the native

alphabet (31), the vowel i is then written i, not i; e.g. fakilad 'faciat', herilad 'capiat', Helevileis 'Helvili'.

- b. An i arising from consonantal i by samprasāraṇa (91, 1) seems to have differed in quality from original i, judging from the spelling of pústiris 'posterius' with -is, not -is, from -ios, in consequence of which the anaptyctic vowel is also i, not i. Cf. also the proper names like Vibis 'Vibius' etc. (172–174). For i in Mais etc., see 176, 3.
- c. Isolated examples of e for i are: menvum 'minuere' on the carelessly written Curse of Vibia; esídum, esidu[m], for the usual isídum 'idem', on two inscriptions of Samnium, possibly due to a local contamination with the stem of essuf 'ipse'.
- 45. UMBRIAN. The spelling is either *i* or *e*, oftener the former. As is the case also with other sounds which are represented by both spellings, the *e* is more frequent in the native alphabet than in the Latin. See 30, 1. For the rare *ei*, see 29.

Examples: tiçel 'dedicatio', tikamne 'dedicatione': L. dicātiō etc.; — dersicust 'dixerit' from *de-dic-ust: O. dicust (44, 95); — uirseto 'visum' from *uideto-: L. videō; — steplatu, stiplatu, stiplo: L. stipulor; — sestu, seste: L. sistō; — teřa, dirsa, dersa 'det' (from Redupl. Pres. *didō): O. didest 'dabit'; — piř-e, pirs-i, pers-i, etc.: L. quid, O. píd; — suffix -iko-, e.g. Pupřike 'Publico' (?), fratreks, fratrex '*fratricus'.

a. The Accusative Singular of *i*-stems nearly always appears as -e(m), -e(m), e.g. uvem, uve, ocrem, ocre, etc. (178, 4), indicating that before final m an i was more than ordinarily open. Contrast the -i(m), -i(m), -ei, of io-stems, in which the i comes from consonantal i by samprasāraņa (91, 1). Cf. 44, i.

ī

- **46.** $\bar{\imath}$ had a closer pronunciation in Latin than the short i, as is proved by the Romance development; e.g. Ital. chi, scritto from L. $qu\bar{\imath}$, $scr\bar{\imath}ptus$, contrasted with che, lece from L. quid, licet. The same qualitative difference existed in Oscan-Umbrian, as is shown by the fact that original $\bar{\imath}$ is indicated in Oscan by i, not i, and that in Umbrian the spelling e, so common for short i, is rare.
- 47. OSCAN. The spelling is i, not i, but where doubling is employed as a mark of length we find ii, not ii like aa, etc.

This spelling if may possibly indicate a nuance of pronunciation something like $\bar{\imath}e$, but more probably it is purely a matter of orthography, ii being avoided on account of its other uses.

Examples: liímítú[m] 'limitum': L. līmes; — imad-en 'ab imo': L. īmus; — scriftas 'scriptae': L. scrīptus; — Abl. Sg. slaagid contrasted with Acc. Sg. slagím; — suffix -īno-, e.g. deivinais 'divinis', Bantins 'Bantinus', Μαμερτινο 'Mamertina'.

48. UMBRIAN. The spelling in the native alphabet is i, ih, rarely e; in the Latin it is i, ihi, ei (very frequent in the first thirty-odd lines of VI a), rarely e.

Examples: persnimu, persnimu, persnimu, persnihimu 'precator', Imperative of the Fourth Conjugation; — screhto, screihtor: L. scrīptus; — peica, peico, peiqu (10 times in VI a 1-17): L. pīca, pīcus; — pehatu, pihatu 'piato', pihaner, pehaner, peihaner 'piandi': L. piō from *pīō, O. Piíhiúí 'Pio'; — suffix -īno-, e.g. Ikuvins 'Iguvinus', Iouinam, Ioueine (ei once only in over 100 occurrences).

0

49. o remains for the most part unchanged, and appears in the Latin alphabet as o, in the native Oscan alphabet as u. But in the native Umbrian, and also in the earliest type of the Oscan, the V did duty for both o and u. All forms from these sources must therefore be ignored in distinguishing the sounds of o and u.

Examples: O. úp, op, U. ostendu 'ostendito' from ops-: L. ob, obs; — O. púst, post, U. post: L. post; — O. púd, pod, U. puř-e, pors-e: L. quod; — O. úpsannam 'faciendam', U. osatu 'facito': L. operor; — O. húrz: L. hortus; — U. poplom: L. populus.

The o is also preserved before l + consonant and before n + guttural, where in Latin, except in early inscriptions, it appears as u. Thus O. molto 'multa', multasikad 'multatica', U. motar: L. multa, early molta, moltāticōd; — O. ultiumam 'ultimam': L. ultimus from *oltimo-; — O. ionc 'eum', with which compare L. hunc, early honc.

u for o

50. In Oscan, before final m the o became u, or at least was changed so far in the direction of u as to be commonly written u. Thus the Present Infinitive (ending -om, 241), with the possible exception of tríbarakavúm (ú not certain) on the Cippus Abellanus, shows -um, -um; e.g. acum, deicum, ezum, censaum, deikum, fatíum. The enclitic particle -om (201, 5) always appears as -um; e.g. pieis-um'cuiuspiam', pidum 'quidquam' (C.A.), isidum 'īdem'. The Acc. Sing. of o-stems, however, though sometimes showing -um, as in dolum, trutum, Núvellum, etc., usually appears as -om (more frequent than -um on the Tabula Bantina) or -um (always on the Cippus Abellanus). It is altogether probable that this spelling of the Acc. forms is a sort of pedantic orthography, due to the o of other case-forms (-oi, ui-, etc.), while the spelling of the other forms, which were not subject to such influence, represents more faithfully the actual pronunciation.

Note. In Umbrian not only does o remain unchanged before final m, but even u becomes o (57).

- 51. In Umbrian before r + consonant, or even before r alone, we find so many examples of the spelling u, although o also occurs, as to make it evident that the vowel was considerably modified in this position. Thus curnaco, curnase (5 times): L. $corn\bar{\imath}x$; prefix pur- in purditom 'porrectum' etc. (10 times, never por-): L. por-; tursitu 'terreto' etc. (4 times) from * $torse\bar{o}$ (97); courtust 'reverterit' for *couurtust beside couortus: early L. vorsus, advortit, etc. (97); furo 'forum': L. forum (it is unnecessary, though possible, to assume that furo contains the reduced grade dhur-, like Grk. $\theta \acute{\nu} \rho \bar{a}$, as compared with $dh \acute{u}or$ -in L. forum); tursiandu 'fugentur' with -du for -tur from -tor; uru 'illo' beside orer 'illius'(?).
- a. Possible examples of u for o before rs from d (131) are du-pursus, petur-pursus (but see 94); also atripursatu 'tripodato', the explanation of which depends on the view taken of L. tripudium etc. beside early $tripod\bar{o}$ (late weakening of o to u, or contamination with a derivative of a root pud-related to $pavi\bar{o}$?).

b. An isolated instance of u elsewhere is sunitu beside sonitu: L. sono.

ō

- 52. The relation of \bar{o} to o is parallel to that of \bar{e} to e. We know that in Latin the \bar{o} had a closer pronunciation than the o, and the same is true of Oscan and Umbrian. But the development of \bar{o} in the direction of \bar{u} has gone further in Oscan than in Umbrian.
- 53. In Oscan, \bar{o} becomes \bar{u} , and is regularly denoted by u, uu, u, not by \hat{u} , o (except dúnúm 'donum', no. 53, which is doubtless due to an error). Examples: Fluusaí 'Florae': L. $fl\bar{o}s$, $Fl\bar{o}ra$; d]uunated 'donavit': L. $d\bar{o}n\bar{o}$; pru 'pro': L. $pr\bar{o}$; uupsens, upsens, $ov\pi\sigma\epsilon\nu s$ 'fecerunt', Perf. with lengthened vowel to *opsāseen in úpsannam (49); suffix $-t\bar{o}r$ in Regatureí 'Rectori', kvaísstur 'quaestor', censtur 'censor', kenzsur, censtur 'censores'; suffix $-i\bar{o}n$ in tríbarakkiuf 'aedificatio', úíttiuf 'usus'; Imperative ending $-t\bar{o}d$ in líkítud, licitud, estud, actud, factud.

The only exceptions to this orthography are case-forms in \bar{o} such as Abl. Sg. $-\bar{o}d$, Nom. Pl. $-\bar{o}s$, Gen. Pl. $-\bar{o}m$, which on the Cippus Abellanus and other specimens of the standard Oscan orthography appear as -úd, -ús, -úm. But we also find -ud, -us, -um, and in the Latin alphabet always -ud, -us, -um. So that the spelling $\hat{\mathbf{u}}$ is probably another piece of pedantry in the standard spelling, due to the $\hat{\mathbf{u}}$ of other case-forms (see also 50). Examples: Abl. Sg. tanginúd, amnúd, sakaraklúd, Búvianúd, etc., but also tanginud, aragetud, tríbud, trístaamentud, amnud, dolud, amiricatud, etc.; Nom. Pl. Abellanús, Núvlanús, etc., but also ius-c; Gen. Pl. Abellanúm, Núvlanúm, fratrúm, etc., but also nesimum (once zicolom), nerum, egmazum, Maµeptivouµ (ov as in ov $\pi\sigma\epsilon\nu$ s; for Λουκανοµ see 24).

- a. The Pompeian inscriptions have Abl. Sg. in -ud, not -úd. Hence, in no. 3, Nom. Pl. fussu is more probable than fússu, though from the stone it is impossible to tell whether u or ú was intended.
- 54. In Umbrian both u and o are found, but not promiscuously. The spelling of individual words is uniform, likewise

¹ Here and in 54 it is assumed that $-\bar{o}m$ had not been shortened to -om. See 78, 4.

that of most formations. It is not clear whether we have to do with an actual difference in pronunciation, or with an artificial regulation of what was once a promiscuous use of both spellings for the same sound.

The spelling u is universal in the Imperative endings $-t\bar{o}d$, $-m\bar{o}d$, e.g. fertu, deitu, etc. (some 300 occurrences); likewise, with one or two exceptions (171, 6, a), in the Abl. Sg. ending $-\bar{o}d$, e.g. poplu, pihaclu, etc. (over 100 occurrences); in the suffix $-t\bar{o}r$, e.g. arsferture. The Nom. Pl. M. of o-stems, ending $-\bar{o}s$, has -ur (on the forms in or see 171, 13), e.g. Atiersiur, tasetur; note especially the contracted form dur 'duo' from $*du\bar{u}r$, $*du\bar{o}s$. The Acc. Pl. M. of o-stems, with secondary \bar{o} (74; but see also 74, note) usually shows -u, e.g. toru, rofu, but sometimes -o, e.g. ueiro (171, 11, a). Cf. also du-pursus 'bipedibus', petur-pursus 'quadrupedibus', probably containing $p\bar{o}d$ - (94); bue 'bove', Acc. Pl. buf (cf. Dor. $\beta\hat{\omega}v$, $\beta\hat{\omega}s$); the pronominal adverbs pue 'ubi' (202, 7), podruhpei 'utroque' (190, 2), panupei 'quandoque' (202, 12).

The spelling o is found in the Gen. Pl. ending $-\bar{o}m$, with a single exception (pracatarum); in the suffix $-\bar{o}n$ -, as Acersoniem, homonus, etc.; in the pronominal adverbs ulo 'illuc,' 'simo 'retro,' eso(c) 'ita', etc. (190, 2); in the root-syllables of several words, as nome 'nomen' (nearly 100 occurrences): L. $n\bar{o}men$; pone 'posca': L. $p\bar{o}$ -sca, $p\bar{o}$ -tus, etc.

Note. Observing that the occurrences of u are in final syllables, or syllables which were final before the addition of enclitics (podruh-pei etc.), or before r (arsferture etc.), we may surmise that in these positions the \bar{o} actually had a closer pronunciation than elsewhere (for the position before r compare u for short o, 51). Further, the predominance of o even in final syllables before m might be attributed to the same influence of m which is seen in the change of original u to o (57). So much is reasonable, perhaps even probable. But to make further distinctions in final syllables — for example, to account for the o in eso etc. as compared with the u of the Ablatives on the ground that these adverbs are Instrumentals, and so ended in $-\bar{o}$, not $-\bar{o}d$ — is to lay more stress on the spelling than Umbrian orthography will warrant, not to speak of the additional complication caused by podruh-pei etc. It is not unreasonable to

¹ See footnote, p. 38.

54

suppose that even in final syllables the sound was one which might be denoted by o, and that in the almost complete uniformity of spelling in the Ablatives there is something artificial, which would not necessarily affect the spelling of the adverbs, whether themselves of Ablative or Instrumental origin.

1

55. Original u remains in general unchanged. Examples: O. supruis 'superis', U. super, super-ne, subra: L. superus, super, $supr\bar{a}$; — O. purasiaí 'in igniaria', U. pure-to 'ab igne': Grk. $\pi\nu\rho\epsilon\tau\delta$ s, $\pi\nu\rho\delta$ s, etc.; — O. puf, puz¹, U. pufe, puse: L. ubi, uti; — U. rufru, Rufrer: L. ruber.

Oscan iu for u

56. In Oscan, after the dentals t, d, n, and once after s, is found the spelling iu. Thus Diumpaís Lumpis': L. lumpa from $*dump\bar{a}$; — tiurrí: L. turrim; — eítiuvam 'pecuniam': eituam in Latin alphabet; — últiumam 'ultimam' with secondary u (86, 1); — Niumsieís, $N\iota\nu\mu\sigma\delta\iota\eta\iota$ s 'Numerii'; — Siuttiis 'Suttius'. This spelling is not found in the Latin alphabet, and to judge from eituam, eituas, was not used. Just what modification of the sound this iu was intended to represent it is impossible to say. But the theory that it was iu like our English pronunciation of u in cube etc. meets with the least objection.

Umbrian o for u

57. In Umbrian, o appears regularly for u before m. Thus somo: L. summus; — Acc. Sg. of u-stems, e.g. trifo 'tribum'; — Supine in -tum, e.g. aseriato 'observatum'. Before p also, the spelling, though usually u (superne, dupla), is sometimes o, as in sopa, sopam, sopo, beside supo: L. supīnus. Here too the sound must have been open, but not so markedly as before m. Another example of o for u, the cause of which is not clear, is sorser 'suilli', sorsom, sorsalem, etc., probably from *su-do-, *su-d-āli-(cf. L. pecu-d-, pecu-d-āli-): L. su- in su-bus etc.

¹ Once *pous*, but the *ou* is probably a mere slip of the engraver, whose eye was caught by the *ou* of the following word on the copy, *touto*.

a. A change of initial iu to i is generally assumed on account of U. iveka 'iuvencas'. But possibly this is only a matter of spelling, as in O. eftiv for eftiuv(ad) etc. See 31, b.

ū

58. \bar{u} generally remains unchanged, as in Latin. Examples: O. Fuutreí 'Genetrici' from $bh\bar{u}$ - (cf. Grk. $\phi\hat{v}\mu a$, Skt. $bh\hat{u}ti$ -, etc.); — O. fruktatiuf 'fructus': L. $fr\bar{u}x$, $fr\bar{u}ctus$; — U. mugatu 'muttito': L. $m\bar{u}gi\bar{o}$. Note also the secondary \bar{u} in U. struhçla, $stru\hat{s}la$ 'struem, *struiculam' from * $stru\hat{u}ikel\bar{u}$ -.

$\bar{\imath}$ for \bar{u}

59. It is probable that a change of \bar{u} to $\bar{\imath}$ (through the intermediate stage of a \bar{u} pronounced like French u, German \bar{u}) is to be recognized for monosyllables in Umbrian and perhaps for final syllables in both Oscan and Umbrian. Examples: U. pir 'ignis': Grk. $\pi\hat{v}\rho$; — U. sim 'suem' from * $s\bar{u}$ -m (Grk. \hat{v} -v), Acc. Pl. sif from * $s\bar{u}$ -f; — U. frif 'fruges' from * $fr\bar{u}g$ -f: L. $fr\bar{u}x$; — Abl. Sg. of u-stems, e.g. U. trefi 'tribu', ařputrati 'arbitratu', mani 'manu', O. castrid 'capite'(?) (Gen. Sg. castrous).

Note. The author has elsewhere (Osk. Voc., p. 111 ff.) shown the possibility of explaining U. pir etc. without the assumption that they come from forms containing \bar{u} . But it must be admitted that the direct comparison with forms in \bar{u} (especially $pir : \pi \hat{v} \rho$) is far simpler. The Ablatives might be explained as examples of heteroclism, but if the change is admitted at all, it may be assumed for these also. At best, however, the precise conditions under which the change took place cannot be formulated with certainty without more material.

DIPHTHONGS

60. In the following sections are considered together not only the original diphthongs ai, oi, etc., but also those which, with shortening of the first element, come from I.E. $\bar{a}i$, $\bar{o}i$, etc., as in the Dat. Sg. of \bar{a} - and \bar{o} -stems (Grk. $-\bar{a}\iota$, $-\eta\iota$, $-\omega\iota$). For there is no evidence of the preservation of a long diphthong as such even in Oscan, and the monophthongization in Umbrian presupposes an intermediate stage of short diphthongs.

But under certain conditions the long diphthongs, instead of shortening the first element, lost the second element, and in this case their further history became identical with that of the original long vowels. Thus the Dat. Sg. ending of o-stems, $-\bar{o}i$ (Grk. $-\omega i$), became on the one hand -oi, represented by the Oscan-Umbrian forms and by early Latin (Praenestine) Numasioi, on the other hand $-\bar{o}$, represented by the usual Latin form.

- a. It is uncertain whether the Dat.-Abl. Pl. ending of o-stems, -ois (likewise Grk. -ois), represents the old Instrumental ending $-\bar{o}is$ (Skt. - $\bar{a}is$) or the Locative ending -ois(i) (Grk. -oisi) or both. After the analogy of -ois was formed the -ais of \bar{a} -stems.
- 61. Diphthongs are always preserved unchanged in Oscan, while in Umbrian they have become monophthongs, even such as are retained in Latin.
- 1. In the Oscan alphabet the *i*-diphthongs appear as ai, ei, úi, the i, as usual, denoting the open quality of the second element (cf. ae, oe, in Latin).
- 2. The *u*-diphthongs appear in the Oscan alphabet as av (rarely au), ev, úv, that is with the sign \exists , not \forall . But there is no reason to believe that this represents a pronunciation like that of modern Greek av, ϵv , in which the second element is a spirant (English v or f). The sign we transcribe \mathbf{v} denoted simply the consonantal u (English w) and might with perfect propriety be used for the second element of a diphthong. Compare the occasional appearance in Greek inscriptions of a_F , o_F , for the usual av, ov; e.g. $Na_F\pi a\kappa \tau i\omega v$, $\sigma \pi o_F \delta \delta \acute{a}v$.
- a. In the Oscan inscriptions of the Greek alphabet we find likewise $A_f \delta \epsilon \iota \epsilon s$, $\tau \omega_f \tau \sigma$, but also $\tau \alpha \nu \rho \sigma \mu$, $A \nu \sigma \kappa \lambda \iota$, and beside the last the curious spelling $A \nu + \nu \sigma \kappa \lambda \iota$, that is $A \nu h \nu \sigma \kappa \lambda \iota$ (cf. also Ahvdiu on a fragment).
- 3. But the history of *i*-diphthongs followed by consonantal *i* is exceptional, as it is also in Latin, and is not included in the following treatment of the several diphthongs. In Oscan the second element is written i, not i (compare fakiiad, 44, a), and in Umbrian the diphthong does not become a monophthong. Thus O. Púmpaiians 'Pompeianus', Púmpaiianeís, Púmpaiiana, etc.,

U. pernaiaf, pustnaiaf (pusnaes for *pusnaies, like pernaies), peřaia, persaia, persaia, persaea (for peřaem, peřae, persae, see 173, 1), with suffix -aiio- (253, 1); — O. Maiiúi Maio' (147, 3); — O. vereiiaí, vereias (once verehias?), U. Teteies(?), with -eiio- (253, 2); — O. Kerriiaí, Kerriiúis, etc., with -eiio- (253, 3); — O. púiiu, púiieh: L. quoius, Grk. ποίος, from *quoi-io- (199, b). The pronunciation is most exactly represented by the spelling with two i's, which is usual in Oscan and frequent in Latin inscriptions and early manuscripts (Maiia preferred by Cicero to Maia, eiius, quoiius, etc.). But a single i, representing a sound belonging equally to both syllables, was also sufficient, and this spelling is regular in Umbrian, occasional in Oscan (Búvaianúd, Tantrnnaiúm, vereias; Maraies beside Maraiieís, 176, 4), and usual in Latin.

a. With O. ai, ei, úi, notaí etc., compare L. mai(i)us, quoi(i)us, not*mae(i)us, *quoe(i)us, and with the preservation of U. diphthongs in this position compare L. ei(i)us contrasted with $d\bar{i}c\bar{o}$ from $deic\bar{o}$, and quoi(i)us, hoi(i)us, contrasted with ūnus from oinos (the change to cui(i)us, hui(i)us, is much later than that in ūnus and of an entirely different character). L. Pompeiānus beside O. Púmpaiians shows that -aijo- became -eijo and so was merged with original -eijo. That is, the diphthong ai became ei, as regularly in medial syllables (cf. *in-caidō, inceidō), and this ei instead of passing on to $\bar{\imath}$ ($inc\bar{\imath}d\bar{o}$) retained its diphthongal value before the i (as in ei(i)us). At least it remained ei in Pompeii, $Pompei\bar{a}nus$. But for many proper names which sometimes show -eius, as Pobleiios, Publeius, Clodeius, etc., and which seem to belong here, the normal Latin form has -ius, as Publius, Clōdius, etc. Cf. also Marius beside Faliscan Mareio, O. Maraies. One might assume that these names simply yielded to the analogy of the commoner type of proper names in -ius. But in view of L. Boviānum beside O. Búvaianúd,1 it is worth while to consider the possibility that in medial syllables, even before i, the ei became \bar{i} , which was then shortened to i; and that it was retained, as in Pompeiānus, only under certain (accentual?) conditions no longer understood.

ai

62. OSCAN. Examples: kvaísstur, κραισ[τορ (borrowed? See 21): L. quaestor; — aídil borrowed from L. aedīlis; — a]íttiúm 'portionum', aeteis 'partis': Grk. aἶσα (*aιτ-μα); — prai, praesentid 'praesente': L. prae; — svaí, suae 'si'; — Dat.-Loc. Sg. of

¹ That this word, which occurs in an inscription found on the site of Bovianum, has nothing to do with the name of the town, as some assume, is incredible.

- \bar{a} -stems (60), e.g. Fluusaí 'Florae', e]ísaí víaí mefiaí 'in ea via media', Bansae 'Bantiae' (Loc.); Dat.-Abl. Pl. of \bar{a} -stems (60, a), e.g. Diumpaís 'Lumpis', kerssnaís 'cenis', exais-c-en 'in his'.
- a. The ai of the last example, as contrasted with usual ae in the Latin alphabet, is due to the following s. For mais see 91, 1, for maimas 114, b.
- 63. UMBRIAN. ai became an open \bar{e} . Its open quality is attested by the fact that the spelling i, so frequent in the case of original \bar{e} , or oi in final syllables, never occurs (cf. also 82, 2, a). Examples: kvestur: O. kvaísstur; pre, pre, prehabia, etc.: L. prae; sve, sve: O. svaí, suae; Dat.-Loc. Sg. of \bar{a} -stems, e.g. ase 'arae', tute, tote 'civitati', Turse 'Torrae'; Dat.-Abl. Pl. of \bar{a} -stems, e.g. tekuries, dequrier 'decuriis'; semenies, sehmenier 'sementivis.'
- a. For the possible appearance of ei as an archaistic spelling representing an intermediate stage in the development of ai, see 29, a.

ei

- 64. OSCAN. Examples: deíkum, deicum 'dicere', deicans 'dicant': L. dīcō, early deicō; Deívaí 'Divae', deivinais 'divinis': L. dīvus, early deivus; feíhúss 'muros': Grk. τεῖχος; preiuatud 'reo': L. prīvātus; ehpeílatas 'erectae, set up': L. pīla; Gen. Sg. of i-stems, I.E. -eis (Skt. -ēs) transferred to consonant- and o-stems, e.g. Maatreís 'Matris', carneis 'partis', eíseís, eizeis 'eius', Κοττειηις 'Cottii', Σταττιηις 'Statii' (for ηι see 24); Loc. Sg. of o-stems like Grk. οἴκει, Lat. -ī, e.g. múíníkeí tereí 'in communi territorio', comenei 'in comitio'; Dat. Sg. of i-and consonant-stems, e.g. Diúveí, Διουρει 'Iovi', kvaístureí 'quaestori', A]ππελλουνηι 'Apollini', etc.
- a. The form ceus 'civis': L. $c\bar{\imath}vis$, early ceivis, if not merely a misspelling, indicates a special development of ei before u, such as is seen in L. seu beside $s\bar{\imath}ve$, early seive.
- b. In some Campanian inscriptions, mixed with Etruscan, we find e for ei, e.g. Gen. Sg. Lucies 'Lucii'; cf. also Gen. Sg. púileh 'quoius' (no. 39).
- 65. In Umbrian the ei appears regularly as e, e, the spelling i being of the utmost rarity. This indicates an open \bar{e} ,

like that from ai (63), as contrasted with the close \bar{e} from original \bar{e} , or oi in final syllables, for which the spelling i is so common. Contrast the spelling of the Gen. Sg. ending, from -eis (64), which is regularly -es, -er, and only once -ir, with that of the Dat.-Abl. Pl. from -ois, which in the Latin alphabet is nearly always -ir (or -eir). See also 82, 2, a.

Examples: prever 'singulis': L. prīvus, O. preivatud; — etu, eetu, from *ei-tōd: L. ītō; — pronominal stem ero-, e.g. erer 'eius', erar, etc. (once, amid countless examples of e, irer): O. eíseís, eizeis, eizeis, eizois, etc.; Gen. Sg. of i-stems etc. (see 64), e.g. Matrer 'Matris', katles 'catuli', popler 'populi'; — Dat. Sg. of i- and consonant-stems (64), e.g. Iuve 'Iovi', karne 'carni', nomne 'nomini'.

a. For the uses of the spelling ei, ei, in Umbrian see 29 with a.

oi

- 66. In Oscan, oi remains, both in initial syllables, where in Latin it becomes \bar{u} , and in final syllables, where in Latin it becomes \bar{i} . Examples: múíníkú 'communis': L. com-mūnis, early comoinem (Goth. ga-mains etc.); úíttiuf 'usus': L. ūtor, early oetor; Dat. Sg. of o-stems (60), e.g. húrtúí 'horto', Abellanúí 'Abellano'; Dat.-Abl. Pl. of o-stems (60, a), e.g. feíhúís 'muris', eizois 'eis', nesimois 'proximis'. Cf. also Pael. coisatens (67, 1), oisa 'usa', Dat.-Abl. Pl. puclois, etc.
- a. Since in all the examples in the Latin alphabet the oi is followed by a sibilant, in which case we also find ai, not ae (62, a), it is likely that the ordinary spelling was oe.
- 67. UMBRIAN. 1. In initial syllables oi becomes \bar{o} . The most obvious examples are in the native alphabet, where u might denote either \bar{u} or \bar{o} , namely: unu 'unum': L. $\bar{u}nus$, early oinos, oenus; kuraia 'curet': L. $c\bar{u}r\bar{o}$, early coiravere, coeravit, Pael. coisatens 'curaverunt'; muneklu 'sportulam': L. $m\bar{u}nus$, related to com- $m\bar{u}nis$ etc. (66; cf. also Lith. $ma\tilde{u}nas$ 'exchange'). But in the Latin alphabet there are several more or less certain examples, on the basis of which we assume that the sound was

 \bar{o} , namely: pora 'qua': O. poizad (thought by some to contain $\bar{o}i$, but see 199, d); — Nom. Sg. poei, poe, poi, which probably contains * $p\bar{o}$, from *poi (O. pui), with the enclitic - \bar{i} ; — nosue 'nisi', which is most naturally explained as containing *noi, a by-form of nei (cf. O. nei suae 'nisi'); — uocu-cum, vuku-kum 'ad aedem' (?), perhaps: Grk. foikos, oikos (sometimes used of a temple or special shrine), L. $v\bar{i}cus$.

2. In final syllables oi became a close \bar{e} , written e, e, i, i, ei. Examples: Dat. Sg. of o-stems (60), e.g. Tefre, Tefrei 'Tefro', pople 'populo'; — Dat.-Abl. Pl. of o-stems (60, a), e.g. pre veres Treplanes 'ante portam Trebulanam', uerir Treblanir, uereir Treblaneir.

For the contrast with the open \bar{e} from ai or ei, see 63, 65; also 82, 2, a.

au

- 68. Oscan. Examples: avt, aut 'at, aut', auti 'aut': L. aut; Avdiis, Αρδειες 'Audius'; Aukíl 'Aucilus'; ταυρομ 'taurum': L. taurus; thesavrúm, from Grk. θησαυρός (21).
- 69. In Umbrian, au becomes \bar{o} . Examples: ute, ote 'aut': L. aut (see 68); turuf, toru 'tauros' (see 68); uhtur, official title: L. auctor; frosetom 'fraudatum': L. fraud \bar{o} .

eu

70. Original eu became ou in the Italic period, so that its further history belongs with that of ou, given below. There are no examples of secondary eu resulting from contraction, as in L. neu etc. But it occurs in O. Evklúí borrowed from the Greek (21).

ou

71. OSCAN. Examples: touto, τωρτο 'civitas', túvtíks 'publicus', etc.: Goth. piuda 'people' etc. (15, 2); — Lúvkanateís '*Lucanatis', Λουκανομ 'Lucanorum', Lúvkis 'Lucius': L. lũx etc., Grk. λευκός; — Gen. Sg. of u-stems (L. -ūs, Goth. -aus, etc.),

- castrous 'capitis';—loufir 'vel' (96); lúvkeí 'in luco': L. $l\bar{u}cus$ (early loucom); Lúvfreís 'Liberi' (Pael. loufir 'liber'): L. $l\bar{\iota}ber$ (with dissimilation of ou to oi, ei, between l and labial; cf. lubet, libet), Grk. $\dot{\epsilon}\lambda\epsilon\nu\theta\epsilon\rho\dot{o}\varsigma$.
- 72. In Umbrian, ou becomes \bar{o} . Examples: tuta, totam 'civitatem': O. touto etc. (71); rofu 'rufos' (96); Gen. Sg. of u-stems (71), trifor 'tribus'.
- a. If Vuvçis is 'Lucius' (O. Lúvkis etc.), as seems probable (104), it is an example of the archaistic spelling often found in proper names, in this case handed down from a period prior to the monophthongization of ou. The normal spelling is seen in Vuçiia-per, if 'pro Lucia'.

Lengthening of Vowels

- 73. In Latin, vowels are regularly lengthened before ns, nf, nct, nx, and so also in Oscan-Umbrian, at least before ns, and, with accompanying loss of n, before nct. Thus O. keenzstur (nz = nts from ns; 110, 1) 'censor': L. cēnsor; O. saahtúm 'sanctum', U. sahta, sahatam: L. sānctus; U. ŝihitu 'cinctos', ansihitu: L. cīnctus.
- a. For lengthening before nf, U. aanfehtaf 'infectas, non coctas'(?) is more doubtful evidence, since, with one a at the end of a line, the other at the beginning of the next, simple dittography is not unlikely.
- 74. In Latin, final ns loses its n with accompanying lengthening of the preceding vowel, as in the Acc. Pl. endings $-\bar{o}s$, $-\bar{\imath}s$, etc. from -ons, -ins, etc. The Umbrian change of -ns to f (110, 2) seems to have been accompanied by lengthening of the preceding vowel, since the o-stem forms are usually written with u (for \bar{o} ; 54), e.g. toru, rofu, and the i-stem forms sometimes with ei (for $\bar{\imath}$; 48), e.g. aueif, treif.
- Note. If, as some suppose, the endings were originally $-\bar{o}ns$, $-\bar{\imath}ns$, etc., and if, further, the shortening of vowels before n+ consonant had not yet taken place, the long vowels in the forms cited might be regarded as original rather than secondary. This would have the advantage of enabling us to explain the -f from -ef in the Acc. Pl. of consonant-stems as due to regular syncope instead of to analogical influence. See 178, 10. Nevertheless, in view of the uncertainty of the two premises, especially the second, the above statement has been preferred provisionally.

- 75. In Umbrian the h resulting from k before t (142) or f before t (121) was weakly sounded or wholly lost, as is obvious from its frequent omission in the writing, and its time seems to have been added to that of the preceding vowel. For only on the supposition that the pronunciation was substantially that of a simple long vowel can we understand such a spelling as sahatam beside sahta (where, however, the vowel was already long before the reduction of h; see 73), or the extension of the spelling h to cases where it had no etymological value but was only a mark of vowel-length. For example, by assuming that in apehtre 'ab extra' (cf. O. ehtrad) the eh was pronounced \bar{e} , we understand how the same characters could be used as a sign of length in amprehtu 'ambito' beside eetu.
- 76. There are certain examples of lengthening, which, although not all on precisely the same plane, have this in common that the vowel is or had been followed by rs.
- 1. U. meersta 'iusta'. In Umbrian the r of rs was weakly sounded, as is shown by its frequent omission in the writing. And this is true not only of original rs (e.g. fasio, fasiu 'farrea' beside farsio; sesna 'cenam' beside sesna tur), but also of the rs which in the Latin alphabet represents original sesna (e.g. sesna to the latter class, for it is a derivative of sesna the sesna the sesna to the latter class, for it is a derivative of sesna to be written. But the spelling with sesna though occurring only once, may fairly be taken as an indication that in general the reduction of sesna was accompanied by a lengthening, perhaps but slight, of the preceding vowel.
- 2. O. peessl[úm beside pestlúm 'templum' from *perstlo-: U. persklum 'sacrificium', persclo, pescler. In Oscan there is no such general reduction of r in rs as in Umbrian (cf. kersnu 'cena' always written with r), but apparently it was differently treated in the group rstl. That the lengthening is confined to peessl[úm and connected with the loss of t (139, 2), is unlikely.
- 3. U. frateer 'fratres' from *frater(e)s points to lengthening before final rs, the s then disappearing.

Note. The early Latin use of ter, from $*t\bar{e}rs$, as a long syllable is not parallel, since the form was not $t\bar{e}r$ with vowel-lengthening, but terr, like hocc, miless, etc. The same is true of far, from fars, which occurs as a long syllable in Ovid and is cited by Priscian (Keil II, 313) among words ending in $\bar{a}r$.

4. O. teer[úm 'territorium', related to L. terra from *tersa. This form is commonly, and perhaps correctly, derived from *terso-, it being assumed

from this that original rs between vowels in Oscan became r with lengthening of the preceding vowel (115, 1). But as this is the only example for such a development of rs, it is well to point out another possible explanation, which is as follows: There once existed a simple neuter s-stem *ters- with Nom.-Acc. Sg. *ters which became O.-U. *ter according to 3. The oblique cases were affected by the analogy of the Nom.-Acc., e.g. Gen. Sg. *terseis being replaced by *tereis (tereis), just as U. Gen. Sg. *farser was replaced by farer under the influence of far. The word then went over completely to the commonest neuter type, that of the o-stems, giving Nom.-Acc. *terom.

77. 1. The \bar{e} of O. eestint 'exstant', echiianasúm 'emittendarum', U. eheturstahamu 'exterminato', etc., like L. \bar{e} - beside ex-, must be due to secondary lengthening, but the conditions under which this took place cannot be the same as in Latin, and are not yet clear.

Note. The \bar{e} in Latin is readily explained as due to the lengthening which regularly accompanies the loss of s (in this case from ks) before m, n, l, etc. But this cannot hold for Oscan-Umbrian, where s remains in these positions (114). The Umbrian \bar{e} might be explained as coming from ek- before t according to 75, but there seems to have been no such reduction of k in Oscan, since in all other forms it is uniformly written.

2. The \bar{a} of O. aamanaffed 'locavit', U. ahauendu 'avertito', etc., like L. \bar{a} beside ab, abs, is likewise due to a secondary lengthening, the conditions of which for Oscan-Umbrian are not clear.

Note. It is possible here to assume a distinct prefix, original \bar{a} -, but the difficulty in the derivation from abs is no greater than that involved in the \bar{e} of O. eestint, where original \bar{e} , even if there were evidence for any such prefix, is out of the question (41).

3. The \bar{o} of U. ooserclom, if this is '*observaculum,' offers the same difficulty. But meaning and etymology of the word are uncertain. The explanation as '*aviservaculum' (\bar{o} from au(i)-; 69) is also possible.

Shortening of Vowels

- 78. Vowel-shortening such as is seen in Latin before final r, l, m, or when the vowel is itself final, is not observable in Oscan or Umbrian. Positive evidence for the preservation of the long vowel is furnished as follows:
- 1. For final \bar{a} , by the forms in -u, -ú, -o (34), since final short a remains (32, 2).

- 2. Before -r, by O. patir¹: L. pater (Grk. $\pi a \tau \eta \rho$), since the i points to \bar{e} (41); O. keenzstur, censtur: L. censor (Grk. - $\omega \rho$), since the u, u points to \bar{o} (53); similarly by the Passive forms O. loufir (Pres. Indic. of Second Conj.; 238, 2), sakrafír (Perf. Subj. with mood-sign \bar{e} ; 234).
- 3. Before -t, by O. kasit¹: L. caret (17, 1), with i for \bar{e} of the Present Stem; cf. also (before -d) O. fusid: L. foret, with i for \bar{e} of the Subjunctive.
 - 4. Before m, by O. paam, L. quam.

Note. As this form is a monosyllable, it would still be possible to assume shortening in polysyllables. But the analogy of the cases in 2 and 3 is against this, and moreover the forms of the Gen. Pl. are more easily understood as retaining $-\bar{o}m$ than as having -om. The Oscan forms might indeed be taken as -om according to 50, but in Umbrian even the single occurrence of -um in pracatarum is of weight in favor of $-\bar{o}m$, since -om never appears as -um.

a. It is probable that the shortening of a long vowel before n + consonant, whether final or not, as in L. amant from *amā-nt, Partic. amant-from *amā-nt-, took place in the Italic period, but the evidence in Oscan-Umbrian is very meagre. See 215, 2, on O. stahint; 217, 4, on O. amfret; also 74, note. For the similar shortening before r + consonant, cf. O. Herekleis, L. Herculës, from Grk. 'Hrakhîs (21).

The long vowel before the secondary ending -ns (e.g. Imperf. Subj. O. h]errins 'caperent'), which has replaced original -nt, may well be due to the analogy of the other forms (O. fusíd etc.). Or, if the explanation given in 128, 1, is correct, the change of nt through nd to n may have antedated the shortening process.

Anaptyxis in Oscan

79. Anaptyxis, or the development of a secondary vowel between a liquid or nasal and another consonant either preceding or following, is a wide-spread phenomenon in Oscan, though unknown in Umbrian. It is necessary to divide the examples into two classes according as the liquid or nasal precedes or follows the other consonant. If it precedes, the quality of the new vowel is that of the vowel preceding, while if it follows, the new vowel has the quality of the following vowel. In

¹ We should expect patir, kasit, but the inscriptions containing these words are careless in the use of i and i.

other words, the newly developed vowel has the quality of the vowel of the syllable in which the liquid or nasal stands.

- a. In the case of mn it is n which is parallel to the nasal in other groups, e.g. comenei from *komnei (81). In fact there is no example of an anaptyctic vowel developed through m.
- b. For the secondary vowel-development in connection with samprasāraņa see 91.
- 80. The liquid or nasal precedes. This type of anaptyxis is one of the marked characteristics of the Oscan (and Paelignian). The regularity with which it appears makes it well nigh certain that the newly developed vowel was not a mere glide, as in vulgar Latin dulicia for dulcia, etc., but formed a full syllable. An interesting parallel is seen in Russian, e.g. golova head from *golva, bereg bank from *bergŭ.
- 1. Liquid. The vowel develops between a liquid and a guttural (including h) or a labial (including u); but not between a liquid and a dental. Examples: aragetud 'argento'; Herekle's 'Herculis'; Μαμερεκιες 'Mamercius'; tribarakavúm 'aedificare' from *trēb-ark-: L. arx; amiricatud '*immercato' (38, 2); Mulukiis 'Mulcius'; Verehasiúi 'Versori' from verh-: L. vergō(?); kulupu 'culpa'(?); Urufiis 'Orfius'; Alafaternum 'Alfaternorum'; turumiiad 'torqueatur': L. tormen; teremniss 'terminibus'; Salaviis 'Salvius' (salavs, σαλαρς 'salvus' owes its form to the oblique cases, for *saluos would give *salus in the O.-U. period; see 91, 1); Kalaviis 'Calvius' (Calavius on Latin inscriptions is simply the Oscan form); Heleviie's 'Helvii'; serevkid 'auspicio' from *seru(i)kio-; uruvú 'flexa'(?): urvum(?). Cf. also Pael. Herec., Alafis, Helevis, Salauatur.

As examples of the lack of anaptyxis before dentals may be mentioned Μαμερτινο 'Mamertina', molto 'multa', alttreí 'alteri', carneis 'partis', kerssnaís 'cenis', Fερσορει 'Versori.'

2. NASAL. The vowel develops between n and f, and in some cases between n and a guttural. Examples:

Anafriss 'Imbribus'(?); — aamanaffed 'locavit', from *manf(e)-fed (223); $avafa\kappa\epsilon\tau$ (for f see 24, b) 'dedicavit' from *anfaked;

— Anagtiai 'Angitiae' from * $Ang(e)ti\bar{a}$ -; — Líganakdíkeí, name of a goddess, from * $l\bar{e}g\bar{a}n(i)ko$ -dik- (or from * $l\bar{e}gn\bar{a}ko$ -, and so belonging in 81?). Cf. also Pael. Anaceta 'Angitiae' beside Anceta, Anaceta.

Note. Usually there is no anaptyxis between n and a guttural, e.g. tanginúd. The conditions under which it took place are not clear.

81. The liquid or nasal follows. This sort of anaptyxis, the same that is seen in Latin pōculum, piāculum, etc., is of a less determinate character than the preceding. It is subject to local variation: at least in the inscriptions of Capua there is no indication of it in the spelling. Elsewhere it occurs regularly after short syllables, but is not entirely confined to this position, the more precise conditions not being clear. Examples: paterei 'patri' (contrast maatreis 'matris'); — púterei-pid 'in utroque', Nom. Pl. pútúrús-píd, etc., from *potro- (88, 4); — petiropert 'quater' for *petirio-pert (100, 3, c), from *petriā-pert (192, 2); — Sadiriis 'Satrius'; — pústiris 'posterius' from *postrios (88, 4),

The author is convinced that the quantity of the preceding syllable is not the only factor to be considered, but that others, such as relative rapidity of utterance, local variations aside from that of Capua, inconsistency in the spelling of what was perhaps not a full vowel, etc., are to be reckoned with. In Latin, where the material is so much more plentiful, it is admitted that the factors are too complicated to allow any precise formulation of the conditions of anaptyxis.

¹ Thurneysen, who first assumed that anaptyxis occurred only after short syllables (K.Z. 27, 181 ff.), has since modified his view to the extent of admitting anaptyxis even after a long syllable in the case of r followed by consonantal i or iin hiatus (I.F. Anz. 4, 38). This would cover pústiris, Aadiriís, etc. In this he is followed by Brugmann, who however treats the development in these cases as a distinct phenomenon (Grd. I2, p. 825). But still further restrictions are necessary. As regards zicolom 'diem', Acc. Pl. dlikúlús, we agree with Thurneysen against v. Planta that the suffix, though originally -kelo-, has passed through the stage -klo-, and that the vowel of the penult is as truly anaptyctic as any other. But we can see no plausibility in his view that the first syllable of this word, and also of Diíviiai, is to be taken as dii- from dio-. Such a change is without even the remotest analogy in Oscan phonetics. And what of the preservation of (d) io not only in iuklei and Iuviia, with which Thurneysen equates zicolom and Diíviiai, but also in Diúveí, Διουρεί, Iúveís, etc.? Does he mean to assume a local change confined to Bantia, Samnium, and the land of the Frentani? But Diúveí is also Samnitic. There is no real difficulty in assuming that anaptyxis in the case of kl took place without regard to the quantity of the preceding syllable. Its absence in sakaraklúm may well be due to the preceding anaptyxis (cf. Herekleis).

but Capuan pústreí in postero'; — Aadiriís 'Atrius' (whence by extension Aadirans); — Vestirikiíúí 'Vestricio'; — sakaraklúm 'sacellum' from *sakrā-klo-, sakarater 'sacratur', σακορο 'sacrum', but Capuan sakrím, sakrafír, etc.; — tefúrúm 'burnt-offering' from *tefro-: U. tefra 'carnes quae cremantur'; — Pukalatúí '*Puclato', but Capuan puklum 'filium'; — zicolom 'diem', Abl. Sg. ziculud, Loc. Sg. zicel[ei], Dat.-Abl. Pl. zicolois, Acc. Pl. d]iíkúlús, from *diē-klo-¹: L. diēcula; — Patanaí 'Pandae' from *Pat-nā-; — akeneí 'in anno'(?), Gen. Pl. acunum (probable reading): U. acnu; — comono 'comitia', Loc. Sg. comenei, from *komno- (15, 4): U. kumne; — O. Safinim 'Samnium', from *Safniom: L. Samnium. Cf. also Pael. sacaracirix, pristafalacirix, as if L. *sacrātrīx, *praestibulātrīx.

a. In kú]mparakineís 'consilii', comparascuster 'consulta erit', it is uncertain which a is anaptyctic; but if the second, and so falling under 80, 1, it would be the only example before s. Against the assumption that the first a is anaptyctic, the preceding long syllable is not decisive. See footnote, p. 52.

Contraction and Hiatus

- 82. Like vowels are contracted.
- 1. The loss of intervocalic i in the Italic period was attended by contraction of like vowels. Thus the ending of the Nom. Pl. of i-stems, originally -eies (Skt. -ayas), became -eis, and the eis had the same history as original eis. So O. trís: L. treis; U. pacrer 'propitii', from stem pakri. Another example of the same contraction is O. húrtín 'in horto' from *hortei-en (Loc. Sg. with postpositive en; 171, 7).
- 2. In Umbrian the close \bar{e} resulting from oi in final syllables (67, 2) was so near in quality to i, that in the Dat. Sg. and Dat.-Abl. Pl. of stems in -iio- and -io- it contracted with the preceding i (and i). Contracted and uncontracted forms are found side by side, but the latter are due to the influence of the other case-forms. Thus Dat. Sg. Iuve, Ioui, beside Iuvie, Iouie, Dat.-Abl. Pl. Atiersir beside Atiersier, etc. Compare

¹ See footnote, p. 52.

- Latin Nom. Pl. $f\bar{\imath}l\bar{\imath}$ beside $f\bar{\imath}li\bar{\imath}$, Dat.-Abl. Pl. $auspic\bar{\imath}s$ beside $auspici\bar{\imath}s$, etc., the contracted forms being very frequent in inscriptions. Contraction of u with the sound resulting from \bar{o} is seen in U. dur 'duo' from $*du\bar{o}s$ (54).
- a. There are no such contracted forms in the case of the open e from original e (Voc. Sg. arsie), or the open \bar{e} from ei (Loc. Sg. Fisie, Gen. Sg. Fisie) or from ai (Dat.-Abl. Pl. of First Decl. dequrier).
- 83. Unlike vowels remain uncontracted, and sometimes h is used as a mark of the hiatus. Thus we find uncontracted:
- āo, in Infinitives of the First Conjugation, O. moltaum, tríbarakavúm (v is simply the glide sound preceding the rounded vowel; cf. occasional Grk. ἀ_Γυτάρ for αὐτάρ, etc.).
- $\tilde{a}\bar{o}$, in U. stahu 'sto' from * $stai\bar{o}$, U. subocau, subocauu 'invoco' from - $\bar{a}i\bar{o}$ (uu=uu with glide as in tríbarakavúm; less probably doubling to indicate length, since this is very rare in final syllables).
- ae, in U. ahesnes 'ahenis' from * a(i)esno (Skt. ayas); U. staheren 'stabunt' from *sta(i)esent.
- āē, in Present Subjunctive of First Conjugation, O. deiuaid, sakahiter, from -āiē-.
- eo, eā, in O. ioc, ionc, iak, U. eam, etc.: L. ea, eum, etc., from *eio-, eiā-. For O. i, see 38, 1.
- oe, in U. Puemune: Sabine Poimunien, L. Pōmōna, pōmum from *po-emo- (cf. cōmō from *co-emō).¹
- \bar{oi} , in U. pue 'ubi' from $*p\bar{o}$ (L. $qu\bar{o}$) $+\bar{\imath}$; U. poei 'qui' from $*p\bar{o}$ (earlier *poi) $+\bar{\imath}$.
- at, in O. stahint 'stant', U. stahitu 'stato'. But the retention of the hiatus here is probably due to analogy, partly of other forms of this verb, partly of the corresponding endings in forms of other verbs.
- a. Between i and a following vowel there is no hiatus, but a glide i which is indicated in the spelling of the native alphabets (31). The consistent use of h in U. pihatu 'piato', pehatu, pihaner, etc. and O. Piihiúi 'Pio' (also Volsc. pihom 'pium') is remarkable, and without adequate explanation.

- 84. Of the various phenomena which take place when vowels of two different words are brought together in the sentence, namely "crasis," "aphaeresis," "slurring," etc., we have but little evidence.
- With L. bonast for bona est etc. are obviously parallel O. teremnatust 'terminata est' and destrest (for *destrust) 'dextra est'. A more anomalous case is U. neiřhabas 'ne adhibeant', if for nei(-a)řhabas. With animadvertō from animum advertō, with slurring, is parallel U. eitipes 'decreverunt' from *eitom *hipens (264, 2).
- a. For O. pússtíst (C. A. 33) the meaning 'positum est' is so much more suitable to the context than that of 'post est' that we cannot reject the possibility that the form comes from *pústúm ist, in spite of the fact that the regularity with which final m is written in Oscan, except at Pompeii, would naturally point to its full pronunciation. That it is not the vowel of the enclitic that is absorbed, as in teremnatust, would be accounted for by the fact that the ist of the Cippus Abellanus is $\bar{e}st$ (217, 2).

Vowel-Weakening in Medial Syllables

- 85. The wide-spread weakening of short vowels and diphthongs which occurs in Latin in medial syllables, such syllables being in the earlier system of accentuation unstressed, is unknown in Oscan-Umbrian. Examples of unchanged a and e, such as U. pro-canurent: L. (oc)-cinu $\bar{\imath}$, or U. taçez: L. tacitus, have been cited in 32, 3, 36, 3.
- 86. But in the position before a labial, or in some cases after a labial, a weakening takes place, which results sometimes in u, sometimes in i. In the corresponding Latin phenomenon the determining factor in the development to u or i respectively was the character of the vowels of the surrounding syllables (cf. $occup\bar{o}$, $nuncup\bar{o}$, but $anticip\bar{o}$, $occipi\bar{o}$, etc., from eap-), but so many secondary changes have taken place, owing to the mutual influence of forms belonging to the same system or formation, that the original distribution is only partially reflected in the actual forms. Much the same is true for Oscan-Umbrian.
- 1. The superlatives, formed from the suffix -(t)emo- (I.E. -(t)mmo-), show the influence of the preceding vowel. Thus

- with L. optumus, maxumus, proxumus, ultumus (eventually optimus etc., under the influence of the commoner type) may be compared O. últiumam 'ultimam' (iu from u; see 56) and U. hondomu 'infimo' (o from u before m; see 57); while with the Latin forms in -imus may be compared O. nessimas 'proximae', nesimois, U. nesimei, and O. messimass 'medioximas'(?). But note U. nuvime 'nonum' from *nouemo- (Skt. navamá-).
- 2. In O. pertumum 'perimere' from *pert-emom the following vowel seems to have been a factor, though in pertemust, peremust, as well as in pertemest, the e is retained, apparently under the influence of the simplex ("recomposition").
- 3. In O. sifei 'sibi' (cf. Pael. sefei, U. tefe), as in L. sibi, the weakening is due to the enclitic use of the pronoun, to which points also O. tfei. In L. simul, early semol, semul, from *semel the weakening in the first syllable is likewise due to enclitic use, and to this probably corresponds U. sumel 'simul', although it is possible to see in the latter an original som- (Grk. ὁμαλός).

Note. The single occurrence of O. the is not sufficient warrant for assuming actual syncope of the e, but on the other hand, taken in connection with sife, it cannot be regarded as a mere graver's error without any foundation in the actual pronunciation. It is doubtless a careless spelling, but one that is due to the reduced pronunciation of the vowel.

4. U. prehubia 'praehibeat' beside prehabia may owe its u to the existence of such forms as *prehubust (cf. habus), just as the u of early Latin $d\bar{e}rupi\bar{o}$ is probably due to a * $d\bar{e}rupu\bar{i}$.

Although there are no examples of i for original a, it is altogether probable that, as in Latin, the a had the same double development as the e, as seen in the superlatives cited above; in this case we must regard prehabia as an example of recomposition for *prehibia.

5. O. praefucus 'praefectus' beside facus 'factus', where the labial precedes, is different from any case known in Latin, but here too the vowel of the following syllable is obviously a factor. A still different, though uncertain, example is O. prupukid 'ex ante pacto', which is most naturally derived from

- * $pr\bar{o}$ -pakio-, although it is possible that this is a case of vowel-gradation ($\mathbf{u} = \bar{o}$ in interchange with a, \bar{a}).
 - 6. A change of o to u is seen in O. amprufid 'improbe'.
- 7. In Latin we find a similar interchange of u and i, where the original vowel is either u or i. A parallel to L. $dissip\bar{o}$ beside the more original $dissup\bar{o}$, or lacrima beside lacruma, would be U. combiftatu 'nuntiato', if this were related to Grk. $\pi v\theta$ ($\pi vv\theta \acute{a}vo\mu a\iota$ etc.); but this is uncertain, since connection with Grk. $\pi \iota \theta$ ($\pi \epsilon \ell \theta \omega$ etc.) is also possible. Vice versa, with L. pontufex beside pontifex we may compare U. atropusatu beside atripursatu 'tripodato', if the former spelling is not simply a mistake.
- 8. A change of ou to u, such as is seen in L. $d\bar{e}nu\bar{o}$ from $*d\acute{e}$ $nov\bar{o}$, has been assumed for Oscan-Umbrian, but on insufficient evidence.

Syncope in Medial Syllables 1

- 87. Syncope of short vowels in medial syllables, as in L. caldus beside calidus, rettulī from *retetulī, etc., is far more extensive in Oscan and Umbrian than in Latin, yet there are numerous examples of the retention of short vowels. We must confine ourselves to a statement of the facts.
- Note. Even in Latin the factors involved are so complex and have been so obscured by subsequent leveling that it is impossible to formulate the precise conditions, though much progress has been made in this direction. For Oscan-Umbrian, with the limited amount of material before us, it is almost useless to speculate upon the original conditions of the syncope.
- 88. Syncope of e. 1. In the Imperatives of the Third Conjugation the original e, which in Latin is changed to i $(agit\bar{o})$, is always lost, except after n. Thus O. actud, U. aitu (ai from ak, 143): L. $agit\bar{o}$; U. kuvertu: L. $convertit\bar{o}$; similarly U. ostendu, fiktu, ninctu, etc.; but U. kanetu: L. $canit\bar{o}$.
- 2. In the Participles in -eto- the e is retained, e.g. U. tasetur 'taciti', maletu 'molitum', etc. (244, 4).
- 3. Further examples are: O. prúffed 'posuit' from *pro-fefed, aamanaffed 'locavit' from *man-fefed: L. prō-didit, etc.; O. upsed 'fecit', úpsannam 'faciendam', U. osatu 'facito', from *opesā-: L. operor; O. cebnust 'venerit': U. benust; O. Dekmanniúís

¹ For a few examples of haplology (L. $s\bar{e}m\bar{e}stris$ from $*s\bar{e}(mi)-m\bar{e}stris$), see 201, 6, 236, 2, a, 237, a, 251, 5,

- '*Decumaniis': L. decumānus, decimus from *dekemo-; O. fruktatiuf 'fructus' from *frūguetātiōn-, as if L.*fruitātiō; U. mersto 'iustum' from *medes-to: L. modes-tus.
- 4. Syncope is usual in the suffixes -kelo-, -elo-, -tero-, -ero-, -men-. In some few cases the short form may be an inherited variety of the suffix, such as -tro- beside -tero-, -lo- beside -elo-, etc. But for the majority of the examples this is improbable, and for some distinctly impossible, e.g. in U. tiçlu on account of the c (144), in U. katlu because original tl becomes kl (129, 2), etc. Examples: U. ticlu 'dedicationem' from *dikelo- (in Nom. Sg. ticel the o of the final syllable is lost and the e remains);— U. veskla 'vascula' from *ves-kelo-; — *die-klo- (whence O. zicolom 'diem' etc., 81) from *die-kelo-; — U. katlu 'catulum' from *katelo- (Nom. Sg. katel like ticel); — U. vitlu 'vitulum' from *uitelo- (cf. O. Víteliú 'Italia', 250); — O. pústreí, U. postra, *postrios (whence O. pústiris, 81, 91, 1): L. posterus, posterius; - *potro- (U. podruhpei 'utroque', O. pútereí-píd by 81): Grk. πότερος; — O. alttram: L. altero-; — O. teremniss: L. terminibus (but O. teremenniú: L. *terminia); — U. nomner: L. nōminis.¹
- 89. 1. Loss of i is seen in O. minstreis 'minoris': L. minister; O. Pupdiis 'Popidius' beside Púpidiis; U. totcor, todceir: O. túvtíks, toutico (15, 2). The loss is common to Latin also in dexter, O. destrst, U. destram, etc.: Grk. $\delta \epsilon \xi / \tau \epsilon \rho \sigma s$, and in the prefix of L. amb-igō, am-plector, O. am-víannud, U. an-ferener, etc.: Grk. $\dot{\alpha}\mu\dot{\phi}\ell$.
- 2. Loss of a is seen in O. eestint 'exstant' from *eks-stahint (cf. stahint 'stant'); O. embratur: L. imperātor, from *em-parātor $(par\bar{o})$; O. prúftú 'posita' from *pro-fato- (244, 1).
- 3. Loss of o is seen in O. akkatus 'advocati' from *ad-uokāto-through *adokāto- (cf. 102, 3; otherwise we should expect *adukatus by 91, 1); perhaps in O. meddiss (263, 1, with footnote) and O. Vezkei (256, 8).

¹ In O. teremniss, U. nomner, tikamne, etc., it is possible to assume the retention of the reduced grade -mn- instead of syncope. But the probability is that these have the same grade as the Latin forms. That the latter owe their -min- to anaptyxis (Sommer, Lat. Laut- und Formenlehre, 154) we are not convinced.

Syncope in Final Syllables

- **90.** In final syllables also, syncope is far more wide-spread than in Latin.
- 1. A short o, e, or i is dropped before final s. Examples: Nom. Sg. of o-stems, e.g. O. húrz 'hortus' from *hortos, Bantins 'Bantinus', Púmpaiians 'Pompeianus', túvtíks 'publicus', Mutíl 'Mutilus', U. Ikuvins 'Iguvinus', fratreks '*fratricus', pihaz, pihos 'piatus' from *piātos, U. tiçel 'dedicatio' from *dikelos; Nom.-Acc. Sg. N. of s-stems, e.g. O. min[s 'minus' from *minos, U. meřs 'ius' from *medos; Dat.-Abl. Pl. (ending -fos: L.-bus), e.g. O. luisarifs 'lusoriis', teremníss 'terminibus', ligis 'legibus', U. avis 'avibus', fratrus 'fratribus'; Nom. Sg. of i-stems, e.g. O. ceus 'civis', aídil 'aedilis', U. fons 'favens' (suffix -ni-; ef. Nom. Pl. foner); Nom. Pl. of consonant-stems (ending -es: Grk. -ες), e.g. O. humuns 'homines', meddíss 'meddices', censtur 'censores', U. frater 'fratres'. (See also 2.)
- a. Before final m vowels are retained, e.g. Acc. Sg. O. húrtúm, touticom, slagím, U. poplom, etc.
- b. That u was not dropped even before final s is in itself probable. Cf. its universal retention in Latin, and likewise in Gothic (dags from *dagas, ansts from *anstis, but sunus). So O. sipus 'sciens', which in its relation to L. sapiō evidently contains the form of the root which characterizes Perfects like L. $c\bar{e}p\bar{\iota}$ to $capi\bar{o}$, etc. (225), may be a stereotyped Perfect Active Participle with Nom. Sg. in -us, like Skt. vidus, Avest. $v\bar{\iota}du\check{s}$. But it is also possible that it comes from *s $\bar{e}p$ -uos, like O. facus from *fak-uos (91, 1); cf. Volsc. sepu 'sciente' from *s $\bar{e}p(u)\bar{o}d$.
- 2. Syncope of e before final s and also before a final dental is seen in the 2d Sg. and 3d Sg. Fut. and Fut. Perf. as in U. heries 'voles', heriest 'volet', from *herieses, *herieset. See 221, 230.

But e remains in the 3d Sg. Perf. Indic. (O. kúmbened 'convenit', etc.; 223 ff.); also in the 3d Sg. Pres. Indic. of the Third Conjugation, though the only examples are from the minor dialects (Marruc. feret 'fert', Vest. didet 'dat'). U. seste also, though variously taken, is probably 'sistis', with e retained, perhaps under the influence of a *sistet. In U. pis-her 'quilibet',

probably from *-herit (216), the syncope is due to the enclitic use of the verb.

Note. Assuming that under conditions no longer apparent both syncopated and unsyncopated forms existed in the Present and Perfect, the survival of the latter may be due to the fact that many of the syncopated forms would have lost their distinctive character, e.g. *kúmben(e)d would have become *kúmben. The Fut. and Fut. Perf. forms retained or seemed to retain the characteristic endings -s, -t.

Samprasāraņa

- 91. In those cases of syncope in which the consonant preceding the syncopated vowel itself assumes the function of a vowel, so that there is no reduction in the number of syllables, the phenomenon is known as samprasāraṇa. Such cases are best kept apart from the preceding, not only on account of the additional process involved, but because, when samprasāraṇa is possible, syncope may take place in positions where it does not otherwise occur. Thus, in general, syncope does not occur before final m (O. húrtúm, etc. 90, 1, a), but this need not prevent our assuming that -iom becomes -im.
- 1. uo to u; io to i. Examples: O. facus 'factus' from *fak-uos (suffix -uo-; 258, 1); O. fortis 'potius': L. fortius; O. pústiris from *postrios (81): L. posterius; so probably mais 'plus' from *maiios (*magios; see 147, 3): L. maius, like Mais 'Maius' beside Dat. Sg. Maiiúi; Nom. and Acc. Sg. M. and Nom.-Acc. Sg. N. of io-stems, e.g. O. Pakis 'Pacius', Acc. Pakim, medicim 'magisterium', U. Fisim 'Fisium', etc. (see 172 ff.).
- 2. ro and ri to r (syllabic r), later er. Examples: U. ager: L. ager, from *agros; U. pacer 'propitius' from *pakris (cf. L. ācer from *ākris); U. -per 'pro', as in tota-per 'pro populo', etc., from -pro; O. Aderl. 'Atella' from *Ātro-lā (cf. L. agellus from *agro-los); O. Abella- (Abellanús) probably from *Apro-lā-(L. aper). Observe also O. trstus 'testes' from *tristo-1: L. testis from *tristi- (but O. tristaamentud: L. testāmentum); O. Tantrnnaium from *Tantrinnaio-(?). See also 239 on O. -ter.

¹ That is, 'third party'. See Skutsch, B.B. 23,100, Solmsen, K.Z. 37,18.

a. The parallel change of no (cf. L. Sabellus from *Safno-lo-) is seen in U. Padellar from *Padenlā, *Padnlā, *Patno-lā (cf. O. Patanai). For the corresponding development of lo there are no certain examples, since U. tiçel, katel, perhaps also O. famel, contain the suffix -elo- (88, 4). O. Fiml, Mitl probably stand for *Fimel, *Mitel (*Mitel: L. Mitulus = O. famel: L. famulus).

b. U. ocar, ukar'mons', although its oblique cases are from the stem

okri-, is not from *okris, but from a by-form with suffix -ari-, or āri-.

Note. The chronology of this process is a difficult problem. The agreement between Latin and Oscan-Umbrian would lead us to infer that it took place in the Italic period. But O. Aderl. and Abella-, with the change of surd to sonant which is observed elsewhere before r (157), would indicate that in the Oscan-Umbrian period the development had not passed beyond the stage r, and now comes the Latin form s]akros = sacer on the newly discovered forum-inscription, which, unless an analogical restoration, proves that the whole process took place independently in Latin.

The reduction of ri in accented syllables (L. ter from *tris, etc.¹) was doubtless later than the change in unaccented syllables, and this is borne out by the existence in Oscan of tristaamentud. But here too the development seems to have begun in Oscan, judging from trstus.

Loss of Final Short Vowels

92. As in Latin, final short vowels are sometimes dropped, sometimes retained. It may be assumed that in the Italic period sentence-doublets arose, of which the dialects inherited now the form with the vowel, now the one without it.

The primary personal endings -ti, -nti (Grk. $-\tau\iota$, $-\nu\tau\iota$) are without the final vowel in Oscan-Umbrian, as in Latin, e.g. O.-U. est 'est', O. stahint 'stant', etc. Further examples are: U. et: L. et, from *eti (Grk. $\check{\epsilon}\tau\iota$); — O. nep, neip, U. neip: L. nec beside neque; — O. avt, aut 'at, aut', but also O. auti 'aut', U. ote: L. aut; — O. ant: L. ante; — O. puf, but U. pufe: L. ubi; — O. pan, but U. pane: L. quamde; — O. pún, but U. ponne: L. *quomde.

¹ The contrast between *ter*, *testis*, and *tribus*, not to speak of *triplex*, etc., shows that in Latin the change was conditioned by the nature of the following sound. It took place before s (cf. change of final *-ros*, *-ris*), and possibly before n, though $cern\tilde{o}$ is not decisive.

Vowel-Gradation

- 93. In many cases the difference in the vowel of related words is not due to any of the regular vowel-changes of a particular dialect, such as have been described in the preceding sections, but is inherited from a system of Vowel-Gradation, or Ablaut, already existing in the parent speech. It is unnecessary here to enter into any discussion of the subject as a whole, but will be sufficient to mention such of these inherited variations as show themselves in the relation of Oscan-Umbrian forms to one another or to the cognate Latin forms.
- 94. e, o, etc. The interchange of e and o (L. tegō: toga) is seen in L. gemō: U. gomia 'gravidas'; U. meřs 'ius', O. meddíss, etc. (15,6): L. modus, 1 modestus; U. nuřpener '-pondiis': L. pondus, du-pondius. Less certain examples are U. sukatu 'declarato'(?), probably a denominative from *soko-: L. insece; U. pruzuře 'praestante'(?), possibly for *prō-sode: L. sedeō.

The \bar{e} -grade is seen in U. prusikurent 'pronuntiaverint': L. insece (cf. L. $s\bar{e}d\bar{\imath}$: $sede\bar{\imath}$); — O. triibim 'domum' etc. (15, 14): U. trebeit 'versatur', tremnu 'tabernaculo' (L. trabs, if related, has a reduced grade).

The \bar{o} -grade is probably seen in U. du-pursus 'bipedibus', petur-pursus (cf. Dor. $\pi\omega$ s, Goth. $f\bar{o}tus$): L. ped-, $p\bar{e}d$ -, although the o-grade is possible.

95. ei, i, etc. The interchange of ei and i (L. $deic\bar{o}$, $d\bar{c}c\bar{o}$: dictus) is seen in O. deicans 'dicant': O. dicust, U. dersicust 'dixerit', U. tiçel 'dedicatio', etc.; — O. feíhúss 'muros' (Grk. $\tau \epsilon \hat{\iota} \chi os$): L. $fing\bar{o}$, $fig\bar{u}ra$, etc.

An example of the oi-grade is U. nosue 'nisi', if from *noi-suai (67, 1): O. nei, L. nei, $n\bar{\imath}$.

Nouns formed with the suffix -ien- show an interchange between the strengthened grade - $i\bar{n}$ - and the long reduced grade - $i\bar{n}$ - (181, a).

a. O. Diíviiai 'Diae' beside Deívaí etc. would point to a reduced grade $d\bar{\imath}y$. But this, although not inconceivable in view of such forms as Skt. $d\hat{\imath}vyati$

¹ But some regard the o in modus as due to assimilation.

'plays', sivyati 'sews', is regarded with suspicion, since the cognates such as Skt. divya- point rather to diu-. Possibly the Oscan form is due to an error.¹

96. ou, u, etc. Since eu becomes ou in Italic (70), ou may represent either this or the original ou-grade. Examples: O. lou-fir 'vel': L. lubet, libet; — U. iouies 'iuvenibus': L. iuvenis; — U. rofu 'rufos': U. rufru 'rubros', L. ruber; — U. purdouitu 'porricito': U. purditom from *duīto- (cf. L. duam).

The interchange of ue and u is seen in O. sverrunei 'spokesman'(?) from *suereson: L. susurrus from *su-sur-eson, the root suer-, sur-, being the same as in Skt. svárati 'sounds' and Eng. swear and answer.

97. er (el), or (ol), etc. Since I.E. r becomes or in Italic, or may represent either this reduced grade or the original orgrade. Examples: U. couertu 'revertito': Fut. Perf. couortus etc. (early L. vorsus, advortet, etc.); — L. terreō: U. tursitu 'terreto'; — U. persclo 'sacrificium', persnimu 'precator': U. pepurkurent 'poposcerint', L. poscō from *porkskō (Skt. prechāmi); — L. circulus (i from e): U. kurçlasiu '*eirculario, extremo'(?).

The \bar{e} -grade is seen in the Nom. Sg. of nouns of relationship, as in O. patir 'pater' (78, 2), beside Dat. Sg. O. paterei from *patrei (81), U. patre, with reduced grade as in L. $patr\bar{i}$, Grk. $\pi a \tau \rho i$; — O. niir 'vir', beside Gen. Pl. nerum with the e-grade (cf. Skt. $n\bar{a}$, Vedic Gen. Pl. $nar\bar{a}m$).

The \bar{o} -grade is seen in the $-t\bar{o}r$ - of agent-nouns, which belonged originally to the Nom. Sg., but was extended to all cases, as in Latin. See 53, 54, 180, 1. The reduced grade -tr- is seen in some derivatives, as U. kvestr-etie beside kvestur, etc. (cf. L. $victr-\bar{\imath}x$). See 246, 1, a.

The long reduced grade \bar{r} becomes ar or $r\bar{a}$ in Italic. Probable examples are: O. $k\acute{\mathbf{u}}$]mparakine $\acute{\mathbf{u}}$ s 'consilii', comparascuster 'consulta erit', with park or $pr\bar{a}k$ (81, a): L. $posc\bar{o}$ (see above); — U. mantrahklu from *man-tr $\bar{a}g$ -klo-: L. mant \bar{e} le from *man-terg-sli- (terge \bar{o}).

¹ See Solmsen, Stud z. lat. Sprachgeschichte, 112. Neither the explanation of v. Planta, I, 173, nor that of Thurneysen, I.F. Anz. 4, 38 (see footnote, p. 52) is at all probable.

U. comatir, kumates commolitis, with loss of l as in mutu multa, is an example of al for \bar{l} (cf. Skt. $m\bar{u}rn\bar{a}$ -), while the ol-grade (cf. Goth. malan, Lith. malù) is seen in Pres. Imperat. comoltu, kumultu (kumaltu is probably due to confusion with the preceding). For maletu see following.

The antevocalic form of the reduced grade, that is χr, becomes ar in Italic, as in L. carō, U. karu, from the root ker-(Grk. κείρω etc.); — O. karanter 'vescuntur', caria 'panis' (gloss) (cf. Grk. κορέννυμι, Lith. szeriù 'feed'). Of similar origin is al in U. maletu 'molitum' and in O. ualaemom 'optimum': L. volō.

- a. The relation of O. aflukad 'deferat'(?) to Fut. Perf. aflakus is wholly uncertain, as is the etymology, though connection with L. flectō seems probable. They might contain the root in the forms flok and flāk from $f\bar{b}k$ (cf. L. falx), but such an interchange between Present and Perfect stems is without parallel in Italic. A more natural interchange would be that of flak and flāk, but the assumption of weakening of a to u in aflukad is somewhat bold, in spite of the uncertainty as to the precise conditions of this phenomenon (86).
- 98. en, on, an. Italic en may represent either original en or the reduced grade n; and an may represent either the long reduced grade \bar{n} , or, according to a view which we regard as probable, the antevocalic reduced grade nn (L. canis, etc.; cf. carō with ar for r, 97). The negative prefix, which represents the reduced grade of the ne seen in O. ne, L. ne-fas, etc., appears in Latin as in-, from en-, n, but in Oscan-Umbrian always as an-; e.g. O. ancensto 'incensa', U. anhostatu 'non hastatos'. That this an- represents \bar{n} , for which there is no other evidence, is less likely than that it is a generalization of the antevocalic form (Grk. $a\nu$ -, Skt. an-) as compared with the generalization in Latin of the anteconsonantal form (Grk. $a\nu$ -, Skt. a-).
- a. In O. tanginom 'sententiam' beside I. tongeō, tongitiō, the an might represent \tilde{n} (cf. n and on in Goth. μ ugkjan beside μ agkjan), but the assumption of a grade \tilde{n} in this root meets with difficulty. Perhaps it is a case of secondary gradation, with interchange of n and n (99, 3).

¹ L. $mol\bar{o}$ is commonly derived from * $mel\bar{o}$ (O.Ir. melim), but U. ol cannot have this origin (36, 2).

 $^{^2}$ On Grk. $\nu\eta\kappa\ell\rho\delta\eta s$ see now Brugmann, Sitzungsberichte d. königl. sächs. Gesellschaft d. Wiss. 1901, p. 102.

- b. O. Anafriss, if related to L. imber (*m-bhri-; cf. Skt. abhrá-'cloud', Grk. $a\phi\rho\delta s$) would seem to point to a by-form *m-bhri-, but this is regarded with rightful suspicion. The connection of the two words is entirely uncertain.
- c. The relation of O.-U. anter to L. inter is almost certainly a different one. It is probable that *en-ter, containing en 'in' (L. in, Grk. $\dot{\epsilon}\nu$), was replaced by a similar formation from an- (L. an- in an-hēlō, Grk. $\dot{a}\nu\dot{a}$), which in Umbrian is used interchangeably with en- (andendu, endendu). Cf. O.Bulg. atrī 'within' (as against jetro 'liver': Grk. $\ddot{\epsilon}\nu\tau\epsilon\rho o\nu$), which is of similar origin.

99. Other variations are:

- 1. \bar{e} , a (I.E. \bar{e}). U. fetu 'facito': O. fakiiad, U. façia (cf. L. $f\bar{e}c\bar{\iota}$: $faci\bar{\iota}$); O. fíísnam, U. fesnaf-e, from * $f\bar{e}s$ - $n\bar{a}$ (cf. L. $f\bar{e}stus$, $f\bar{e}riae$): L. $f\bar{a}num$ from *fas-no-. Cf. also the \bar{e} -Perfects to Presents with a, O. hipid 'habuerit', sipus 'sciens' (90, 1, b).
- 2. \bar{a} , a (I.E. θ). O. Staatiis: stahint (short a shown by eestint), statif, statis, probably also with short a (cf. L. $st\bar{a}re$, $prae-st\bar{a}tus$, etc.: $stati\bar{o}$, praestitus, etc.); L. $f\bar{a}r\bar{\imath}$: O. fatium, L. fateor (denominative from a Partic. *fato-, replaced in Latin by $f\bar{a}to$ -); O. faamat 'habitat, tendit': L. famulus, familia, O. famel, famelo.
- 3. a, o, \bar{a} . L. acies, $acu\bar{o}$, etc. (Grk. $a\kappa\rho\sigma$): L. acris, U. acar (Grk. $a\kappa\rho\sigma$): L. acer (so probably O. akrid, but possibly ak-); O. akrid: L. accordonale L.
- 4. e, a. Of this variation, which is seen in the relation of L. pateō, pandō, O. patensíns, to Grk. πετάννυμι, the following are uncertain examples: L. tepor: U. tapistenu 'caldariolam'(?); U. erietu (or ē?): L. ariēs.
- 5. i, $\bar{\imath}$. L. vir (Goth. wair, O.Ir. fer): U. ueiro, uiro (Skt. $v\bar{\imath}r\acute{a}$ -, Lith. $v\acute{y}ras$).

Note. The three occurrences of the spelling *ueiro* make it less likely that this is to be added to the rare cases of ei for short i (29). Cf. also Volsc. couehriu 'curia' from *co- $u\bar{i}rio$ - (L. $c\bar{u}ria$ from *co- $u\bar{i}ri\bar{u}$ -).

- 6. u, \bar{u} . U. pure-to, O. purasiai: U. pir 'ignis' (59).
- 7. The relation of U. veskla 'vascula' to U. uaso, L. $v\bar{a}s$, is not clear. A variation of e or \bar{e} with \bar{a} is not well established.
- 8. o, \bar{o} . O. úpsannam, etc. (49): O. uupsens, etc. (53). But see 225, a.

CONSONANTS

Consonantal i (i)

100. 1. Initial *i* remains unchanged, as in Latin. Thus U. *iouies* 'iuvenibus': L. *iuvenis* (Skt. yúvan-).

For i from di, see 134.

2. Intervocalic *i* was lost in the Italic period, and of the resulting vowel-combinations some are contracted, while others remain in hiatus. See 82, 83. But between *i* and a following vowel there naturally intervenes a glide, or transition sound, *i*, which is shown in the spelling of the native alphabets, but not in the Latin; e.g. U. triiu-per, but trio-per: L. tria. See 31, a.

The i following an i-diphthong is also retained. See 61, 3.

- a. For U. portaia, kuraia, etc., see 232; for U. fuia, fuiest, 215, 3; for O. staiet, 215, 2.
- 3. Postconsonantal *i*, which in Latin becomes a vowel (e.g. medius for original dissyllabic *medh-io-), retains its consonantal function. In the Latin alphabet it is impossible to know whether an *i* stands for consonantal or vocalic *i*, but in the native alphabets, where the latter regularly appears as ii, a single *i* is evidence of consonantal value, though there are some few cases in which it is used carelessly in place of ii. See 31, a.

But more direct evidence of the consonantal function is furnished in those cases in which a preceding consonant has been affected, as follows:

- a. Gemination of consonants before *i* is frequent in Oscan, e.g. kúmbennieis 'conventus', Mamerttiais 'Martiis', tríbarakkiuf 'aedificatio', etc. See 162, 1.
- b. In Umbrian, i palatalizes a preceding n and k, and the i is then sometimes omitted in the writing. So spina beside spinia, Rubine beside Rupinie; façu beside façiu, etc. (144).
- c. In the local dialect of Bantia, *i* unites with a preceding l, r, t, d, k, to form l(l), r(r), s, z, x. Thus allo from *alia: L. alia; famelo from *famelia: L. familia; so perhaps

mallom, mallud, malud from a stem *malio- beside L. malo-;—herest 'volet' from *heriest: U. heriest; — petiro-pert 'quater' from *petirio-pert, this from *petriā-pert (81, 192, 2); — Bansae from *Bantiae; — zicolom 'diem' from *diēkolom: L. diēcula; — meddixud 'magistratu' from *meddikjōd (250, 2).

Note. In some cases the *i* itself is the result of a local change of vocalic *i*. So *petriā-pert must have had *i*, not *i*, and probably * $di\bar{e}kolom$ (134, a).

Consonantal u (u) 1

- 101. Initial and intervocalic u remain, as in Latin. Examples:
- O. víú, U. via, vea, uia: L. via; Ο. Γερσορει '*Versori', U. ku-vertu, co-uertu 'convertito': L. vertō.
- O. Iuveí, U. Iuve: L. $Iov\bar{\imath}$; O. bivus: L. $v\bar{\imath}vus$; O. deivinais: L. $d\bar{\imath}v\bar{\imath}nus$; U. uvem, oui: L. ovis; U. avif, auif: L. avis.

The glide u, which was regularly sounded between u and a following vowel, shows itself in the spelling in the native alphabets, but not in the Latin; e.g. U. tuves, but duir: L. duo. See 31, b.

- 102. 1. Postconsonantal u generally remains unchanged. Thus O. svaí, suae 'si' (L. sī is from a form without u);—O. dekkviarím 'decurialem';—U. arvia 'frumenta': L. arvum.
- 2. After labials u is lost, as in Latin. Thus O. fufans 'erant': L. -bant from -bhuā-; O. amprufid 'improbe', prúfatted 'probavit': L. probus from *pro-bhuo-; U. subocau 'invoco' from *sub-uocāiō; 2 O. Piíhiúí 'Pio', U. pihatu 'piato': L. pius from *puīio- (cf. L. pūrus).
- 3. du, in Latin b (and v), becomes d. Thus U. di-fue 'bifidum': L. bis etc., from *dui-; U. dia 'det' from *du- $ii\bar{o}$ (cf. L. duam); U. pur-ditom 'porrectum' from *du-ito- beside

¹ In the citation of Oscan and Umbrian forms it is customary to use the v only for forms written in the native alphabets, in which there was a distinct character for it, and not for forms written in the Latin alphabet. But for Latin words we continue to use the v, in spite of the resulting inconsistency.

² L. subveniō etc., under the influence of the simplex (but aperiō from *ap-yeriō, the simplex being lost). See 164, a.

pur-douitu (96); — O. akkatus 'advocati' from * $ad(o)k\bar{a}to$ - (89, 3), this from * $ad-uok\bar{a}to$ -.¹

- 4. An apparent loss of u after r is seen in U. seritu 'servato', anseriato 'observatum', and caterahamo '*catervamini', as compared with L. servō, caterva. But the precise explanation is not clear. In seritu etc. it may be due to the position between r and \underline{i} , i.e. *serjō from *serujō.
 - 5. For sue, see 37, a.

r

- 103. 1. r usually remains unchanged, as in Latin. Examples: O. Regaturei 'Rectori', U. rehte 'recte': L. regō; O. teremniss 'terminibus', U. termnom-e: L. termen; U. fertu, ferar, etc.: L. ferō.
- 2. It is also retained in some combinations in which it is lost in Latin, as rsk, rsn. But in Umbrian, in these combinations, and in general before s, the r was faintly sounded and often omitted in the writing. See under rs, 115, 116.
- a. In O. Falenias, beside Faler. on a companion inscription, the omission of r is due to carelessness in spelling, though the sound of r is naturally somewhat less distinct before consonants than elsewhere.
- 3. The combination rl appears unassimilated in O. Aderl. 'Atella' of an old coin, but has become ll, as in Latin, in Abella-(Abellanús), probably from * $Aberl\bar{a}$ -, * $Apro-l\bar{a}$ (91, 2).
- 4. Final r is frequently omitted in Umbrian, mostly in the forms of the Passive. So herte, herti, hertei, beside herter; emantu beside emantur; pihafi, pihafei: O. sakrafir; tuta-pe beside usual tuta-per 'pro populo'.

1

104. Initial l is seen in O. ligud 'lege'; — líkítud, licitud 'liceto'; — loufir 'vel': L. libet; — Lúvfreís 'Liberi'; — lúvkeí 'in luco', etc.

In Umbrian there is no example of an initial l on the Iguvinian Tables, and a change of initial l to u, though disputed, is

¹ L. advocõ, etc., under the influence of the simplex. See 164, a.

probably to be recognized in vutu 'lavato': L. lavō;—vapeř-, uapers-'sella': L. lapis (cf. subsellis marmoreis of the Acta Arvalium); — Vuvçis 'Lucius' (72, a). Other examples are very doubtful.

Note. A change of l to u before consonants is seen in many languages, e.g. French *autre* from L. alter; Dutch koud: Eng. cold. In such cases, and likewise in Umbrian, the change must have been through the medium of a strongly guttural l.

- 105. 1. Medial l is generally preserved in both Oscan and Umbrian. Examples: O. Fluusaí 'Florae'; O. allo 'alia'; O. Alafaternum, U. alfu 'alba': L. albus; U. plener 'plenis'; U. saluom 'salvum'.
- a. O. Fiuusasiais "Floralibus' beside Fluusai, if not simply due to the carelessness of the engraver, would point to the beginning of a change similar to what has taken place in Italian *flore*, *piano*, etc. But all other evidence is against this.
- 2. In the combination lt the l is lost in Umbrian. So muta, motar, etc.: O. moltam, L. multa; kumates, comatir 'commolitis'. But in the Imperatives kumultu, comoltu 'commolito', veltu 'deligito', etc., in which the l and t were formerly separated by a vowel, the l is always written.
- a. The Oscan atrud beside altrei on the Tabula Bantina is an indication that in the dialect of Bantia the l was not fully sounded, though in the numerous occurrences of molta it is never omitted.
- 3. U. Uoisiener 'Volsieni', on an inscription of Assisi, shows a local palatalization of l before s, or else is due to Etruscan influence.
- 106. In a number of Umbrian words an original l is represented by $\check{\mathbf{r}}$, rs, which commonly stands for an intervocalic d (131). This points to a change of l to d, with which we may compare the opposite change of d to l in L. lingua, lacrima, etc. The most certain examples are kařetu, carsitu 'calato', uřetu 'adoleto', fameřias 'familiae'.
- a. Whether arsir (VI a 6, 7) is 'alius' or Dat.-Abl. Pl. 'caerimoniis' belonging to Voc. Sg. arsie 'sancte', is uncertain. That Pupřike, Pupřice, epithet of Puemune, is 'Publico' is extremely probable, in view of L. Publica Fides, Publica Fortuna, etc. The old explanation of tribřiçu 'ternio' as = L. *tripliciō cannot be considered impossible, but Brugmann's derivation from *tri-p(e)d-ikiōn-'band of three' (L. pedica) offers a plausible substitute for this.

No satisfactory statement can be made as to the conditions under which the change took place.

n and m

- 107. 1. Initial and intervocalic n and m remain unchanged, as in Latin. Examples: O. ni, nep, neip, U. neip: L. $n\bar{e}$, nec, etc.; U. nome: L. $n\bar{o}men$; O. dunum, U. dunu: L. $d\bar{o}num$; O. Maatreis, U. Matrer: L. $m\bar{a}ter$; O. moltam, U. motar: L. multa; O. pertemest, U. emantur: L. $em\bar{o}$.
- 2. Similarly postconsonantal n and m; e.g. O. egmo 'res'; O. Patanaí 'Pandae' from * $Pat-n\bar{a}$ (81); O. comono 'comitia', U. kumne, from *komno- (15, 4, 81).
- a. A change of mn to m is perhaps to be recognized in the Passive Imperative ending, O. -mur, U. -mu, though this is by no means certain. See 237. This would involve the supposition that in all the numerous examples of mn the combination is of secondary origin, as indeed it probably is in many cases, e.g. U. nomner 'nominis' etc. (88, 4).
- 3. Assimilation of nl to ll, as in Latin, is seen in O. Vesulliais from $*Ves\bar{o}n-li\bar{a}$: U. Vesune; U. Padellar from $*Paden-l\bar{a}$ (91, 2, a); also in U. apelust etc. with l from nl, earlier ndl (135).

Omission of nasals before consonants

- 108. 1. In Umbrian, nasals were not fully sounded before mutes and spirants, as is evident from their frequent omission in the writing. The circumstance that in the Latin alphabet this omission is to be noted only before s (once before f) is perhaps due to the influence of Latin orthography, the omission of n on Latin inscriptions being far more common before s than elsewhere. Examples: ustetu beside ustentu, ostendu ostendito;—iveka beside inenga invencas;—kupifiatu beside kumpifiatu, combifiatu inuntiato;—azeriatu, aseriatu beside anzeriatu, anseriato observatum;—dirsas beside dirsans dent;—sis beside sins int;—Saçe beside Sansie;—aferum, afero, beside anferener circumferendi.
- 2. In Oscan, n is regularly omitted in the case of final ent. Thus set 'sunt', filet 'fiunt', staiet 'stant', censazet 'censebunt', etc.:

¹ Admitting the change, we should hold to the derivation of O. comono etc. and amnúd 'circuitu' from *kom-no-, *am-no- (v. Planta prefers *kom-beno-, *am-beno-), and assume that the words came into existence at a later period.

U. sent, benurent, etc. Note that in this case the n is always written in Umbrian, while, vice versa, in the case of final -ns, where it is frequently omitted in Umbrian (above), it is always written in Oscan (deicans, uupsens, etc.).

The same omission is frequent, though not universal, in the case of medial *ent*, e.g. aragetud 'argento', Aret[ikai] beside Arentikai, deketasiúí (degetasis etc.) '*decentario'.

a. Isolated examples of omission elsewhere are mistreis beside minstreis 'minoris' and $\Lambda a \pi o \nu \iota s$ 'Lamponius'(?).

In ekak 'hanc' and 'fak 'eam' beside ionc 'eum', eisunk 'eorum', etc., the omission is probably due to the influence of Accusatives with final m omitted. All the certain occurrences of ekak are on Pompeian inscriptions, which have via 'viam' etc. (109, 2).

3. A special case in which n is lost in both Oscan and Umbrian is in the combination nkt. See 73.

Final n and m

- 109. 1. In Umbrian, final n and m were so faintly sounded that they are far oftener omitted than written. Thus Acc. Sg. puplu, poplo, beside puplum, poplom; nome: L. $n\bar{o}men$; -e beside -en in'. For final n we also find m written. This is not merely the result of confusion caused by the reduction of both nasals, since we never find n for m, but is due to the influence of a preceding m, as in numem beside nome, and in Akeřuniam-em etc. beside esunum-en, esunum-e, etc. From its use with the Acc. Sg. the -em came to be used elsewhere too, as in Loc. Sg. Acer-soniem etc.
- 2. In Oscan, final n is never omitted. Final m is nearly always written except on inscriptions of Pompeii, where it is oftener omitted than written, e.g. vía 'viam', tiurrí 'turrim'. But it is possible that even where m was regularly written it was reduced in pronunciation. See 84, a.

ns

110. The history of the combination ns is somewhat complicated. It is necessary to separate the cases of original ns

from those in which it is of later origin, and again to distinguish these latter according to the period at which the ns arose.

- 1. Original medial ns becomes nts, as appears from the spelling nz in the native alphabets, though this is not constant. In the Latin alphabet ns is written. Cf. z: s for final -ts in U. taçez: tases 'tacitus', etc. (137, 2). Thus O. keenzstur (for zs see 162, 2), censtur 'censor' from *kens-tōr; U. anzeriatu, anseriato 'observatum' from *an-seriā-; U. menzne 'mense' (from stem *mens-en-; cf. Sab. mesene), antermenzaru 'intermenstrium'; U. uze, onse 'in humero' from *om(e)so-.
- 2. Original final ns becomes -ss in Oscan, but -f in Umbrian. Thus Acc. Pl. O. víass, eituas, feíhúss, U. vitlaf, vitluf, etc.
- a. Umbrian final f was so weakly sounded as to be frequently omitted in the writing, e.g. uitla, uitlu. In the oldest tables the omission is comparatively infrequent, while in those written in the Latin alphabet the f is omitted nearly ten times as often as it is written, except in monosyllables, where it is written nearly four times as often as omitted.
- 3. Secondary medial ns from nss, originating in nt-t or nd-t (138), becomes f in Umbrian, there being no examples in Oscan. Thus spefa 'sparsam' from *spensso-, *spend-to-t (cf. Grk. $\sigma\pi\acute{e}\nu\delta\omega$): L. $sp\~onsus$ from *sponsso-, *spond-to-t; similarly mefa 'mensam' from * $menss\~a$ -: L. $m\~ensa$, $m\~ensus$; subra spafu 'superiectum' from *spansso-.
- a. *mensso- is not from *mend-to- (cf. L. mētior, Skt. mā-, etc.), but is formed after the analogy of Participles of related meaning such as *pensso- (L. pēnsus), *tensso- (L. tēnsus), from roots in -nd. *spansso- may be of similar origin, but it is possible that beside the *spā- of U. spahatu, spahamu (cf. Grk. $\sigma\pi\dot{a}\omega$) there was another root-form *spand- and that L. pandō represents a contamination of this with the root seen in L. pateō. In this case U. spafu could be compared directly with L. pānsus.
- 4. Secondary final ns from -nss, earlier -nts, becomes f in Umbrian, there being no examples in Oscan. See 243. Thus zeřef, serse 'sedens': L. $sed\bar{e}ns$ from *sedent-s; restef, reste 'instaurans'; traf, tra 'trans'. For omission of f, see above, 2, a.
- 5. Secondary final ns in the Nom. Sg. of n-stems (181) appears as f. Thus O. úíttiuf, tríbarakkiuf, statíf, and probably

- O. essuf, esuf 'ipse', U. esuf (197, 5). On the strength of esuf we assume that Umbrian had the same formation and that in tribřiçu and karu the f is omitted, as often (above, 2, a).
- 6. Secondary final ns resulting from syncope of vowels (90) remains unchanged. Thus O. Bantins 'Bantinus', U. Ikuvins 'Iguvinus', O. humuns 'homines' from *hōmōnes, etc. See 90, 1.
- 7. Final ns appears also in the secondary ending of the Third Plural, as in O. deicans, U. dirsans, etc. On its origin see 128, 1.

In tabular form the representation is as follows:

		Ο.	U.
τ	1. Origns-	-nts-	-nts
1.	1. Origns- 2. Origns	-88	- f
	3ns- from -nss- (-ntt-)		- f-
II.	4. $-ns$ from $-nss$ ($-nts$)		-f
	5ns in Nom. Sg. of n-stems	- f	-f
III.	6ns by Syncope	-ns	-ns

Note. Although there are no Oscan examples for 3 and 4, the probability is that Oscan agreed with Umbrian and that 3, 4, and 5 belong together. This change of secondary ns must have antedated the appearance of what might be called the tertiary ns of 6, which doubtless belongs to the close of the Oscan-Umbrian period. Again, the change of original ns must have antedated the appearance of the secondary ns, else they would have had the same development. Here arises a complication in the case of original final ns. The divergence between Oscan and Umbrian shows that the development could not have been completed in the Oscan-Umbrian period. The only solution is to assume that final ns, either in Italic or in the earliest Oscan-Umbrian period, was so changed as to remain distinct from both secondary and tertiary ns throughout the Oscan-Umbrian period, and also in Oscan, though in Umbrian finally yielding the same result as secondary ns.

S

111. Initial s and s in connection with a surd mute remain, as in Latin. Examples: O. súm, set, U. sent, sins: L. sum, sunt, etc.; —O. sakrim, U. sakre: L. sacer; —O. staít, U. stahu: L. stō; —O. est, U. est, est: L. est; —O. púst, U. post: L. post.

Intervocalic s. Rhotacism

112

- 112. Rhotacism of intervocalic s occurs in Umbrian as in Latin, but not in Oscan. In the latter the s has become z, written z in the Latin alphabet, but s in the native alphabet, in which z had the value of ts. This change of s to its corresponding sonant z is a necessary stage in the development of rhotacism, and was probably reached in the Italic period, Oscan then remaining on this stage. Examples: Gen. Pl. of \bar{a} -stems, O. -asúm, -azum, U. -aru, -arum : L. - \bar{a} rum (Skt. - \bar{a} s \bar{a} m, Hom. - \hat{a} $\omega \nu$ from *- $\dot{a}\sigma\omega\nu$; — O. ezum, U. eru, erom 'esse': L. erō, etc.; — O. eíseís, eizeis, U. erer 'eius' from *eiso-; — O. kasit 'decet': L. caret; — forms of Imperf. Subj., Fut. Indic., and Fut. Perf. Indic., in which s is a part of the tense-sign (see under Inflection), e.g. O. fusíd 'esset': L. foret; — O. censazet 'censebunt', U. furent 'erunt'; — O. tribarakattuset 'aedificaverint', U. benurent 'venerint'. Cf. also Pael. coisatens 'curaverunt' (U. kuraia 'curet'), upsaseter 'operaretur, fieret'.
- a. In most cases where s is found between vowels in Umbrian, this s is obviously not original but comes from a group of consonants, such as ss, tt, ts, ks, ps. But there are some forms the explanation of which is not so apparent. Nothing satisfactory can be said of asa-, asa-: O. aasai, L. $\bar{a}ra$. For esono-'sacer', related to O. aisusis 'sacrificiis' etc. (15, 3), it is possible to assume an extension of an s-stem, i.e. * $ais(e)s-\bar{o}no$ -, while erus 'magmentum'(?) and ereclu 'sacrarium', if cognate, show the regular change of simple s. In plenasier, urnasier, etc., as compared with Latin words in $-\bar{a}rius$, the s is probably due to the fact that the following i was consonantal, that is they contain the suffix $-\bar{a}sio$ -, while the by-form $-\bar{a}sio$ is perhaps to be recognized in ezariaf 'escas'(?), from * $ed(e)s-\bar{a}sio$ -(?).

Final s

113. Final s remains in Oscan, and in Umbrian on the older Tables I-IV, but on Tables V-VII it appears as r. Thus Nom. Pl. of o-stems (O. -ús, -us), U. prinuvatus, prinuatur, Atileřiur (V), etc.; — Dat.-Abl. Pl. of o-stems (O. -ús, -ois), U. veres, uerir, tripler (V), etc.; — 2d Sg. U. sir 'sis'. These r-forms doubtless represent sentence-doublets, arising before words beginning with

- a vowel, but finally coming into general use without regard to the following word.
- a. Before enclitics an s is treated in the same way as in the interior of a word. So U. funtler-e, fondlir-e'in fontulis', but esunes-ku'apud sacra', ueris-co'apud portam'. But pis-i kept its s under the influence of pis (svepis 'si quis'), and retained it even after the latter had become pir (pisi, but sopir). Similarly pis-est.
- b. The final s of Tables I-IV is sometimes omitted, e.g. Ikuvinu beside Ikuvinus, prinuvatu beside prinuvatus, snate beside snates, antakre beside antakres, etc. The later r is also occasionally omitted, as in sei, si, beside sir 'sis', heri 'vel' beside heris, but scarcely ever in noun-forms.
- c. In Oscan there are two examples of h for final s, where the next word begins with s, namely upsatuh sent operati sunt, púileh súm cuius sum. The occasional omission of s in the Nom. Sg. of proper names in -is, -iis, etc., e.g. Steni, Paapi, Paapii, Paapii, is merely graphic, perhaps due to the influence of Latin orthography (Claudi = Claudius, etc.).

sn, sm, sl, zd

- 114. The combinations sn, sm, sl, zd, which in Latin lose the sibilant (if medial, with lengthening of the preceding vowel), remain unchanged.
- sn. U. snata 'umecta': L. $n\bar{a}re$; O. fíisnú 'fanum', U. fesnaf-e (also Pael. fesn.): L. $f\bar{a}num$ from *fas-no- (99, 1); U. ahesnes 'ahenis': L. $ah\bar{e}nus$ from *a(i)es-no- (aes, Skt. ayas, etc.); O. kersnu 'cena', U. sesna: L. $c\bar{e}na$; O. casnar 'senex' (Festus, Varro; also Pael.): L. $c\bar{a}nus$, cascus.
- sm. U. pusme 'cui', esmei 'huic' (Skt. ásmāi etc.); so also O. posmom 'postremum' with sm from stm (139, 2). Cf. also Pael. prismu 'prima'.
- sl. O. slaagid 'fine' (derivation uncertain); O. Slabiis 'Labius'; U. dis-leralinsust 'inritum fecerit' (cf. L. $d\bar{\imath}lig\bar{o}$ from *dis- $lig\bar{o}$, etc.); so also O. peessl[$\bar{u}m$ with sl from stl (139, 2).
- zd. U. sistu 'sidito', ander-sistu, is best explained as from $*sizd(e)t\bar{o}d$: L. $s\bar{o}d\bar{o}$ from $*si-zd\bar{o}$ (cf. $n\bar{o}dus$ from *nizdos, Eng. nest).

- a. U. ninctu 'ninguito', the root of which appears in other languages with initial s (Eng. snow, Lith. $sn\tilde{e}gas$, etc.), may represent a by-form without s, like Grk. $\tau\dot{\epsilon}\gamma os$ beside $\sigma\tau\dot{\epsilon}\gamma os$, etc.
- b. O. maimas 'maximae' is probably from *maisemo- (147, 3, a, 189, 3), through the stages *maizemo- (112), *maizmo-, with loss of z, in contrast to the preservation of s.
- c. U. sumtu 'sumito', which cannot be explained in the same way as L. $s\bar{u}m\bar{v}$ from *susm \bar{v} , *sups-(e)m \bar{v} , is probably from *summ \bar{v} , *sup-(e)m \bar{v} (125, 1).
- d. That O. imad-en 'ab imo' comes from *ins-mo-, often assumed as the derivation of L. $\bar{\imath}mus$, is unlikely.

Intervocalic rs

- 115. 1. Original intervocalic rs, which becomes rr in Latin, remains unassimilated in Umbrian, while in Oscan it appears as r with lengthening of the preceding vowel. In Umbrian rs the r was weakly sounded and often omitted in the spelling. Examples: U. tursitu, tusetu 'terreto': L. terreō from *terseō;—U. farsio, fasio, fasio 'farrea': L. farreus from *fars-eo- (see 117), O. terúm, teer [úm 'territorium': L. terra from *tersā.
- a. U. Gen. Sg. farer instead of *farser (L. farris) is due to the influence of the Nom.-Acc. far (117).
- 2. Intervocalic rs arising from syncope, in Latin not distinguished from the preceding, appears in Umbrian as rf, in Oscan as rr. Examples: U. Cerfe, Serfe: L. Cerus (i.e. Cerrus), from *Ker(e)so-; O. Kerrí 'Cereri' from *Ker(e)s-ē-; U. parfa 'parram' from *paresa-; O. h]erríns 'caperent' from *her(i)sēnt (216); O. sverruneí from *sueres-ōn-: L. susurrus (96).

Note. For the development of original rs in Oscan, as given above, the following stages must be assumed: rs-rz-rr-r with compensative lengthening. The later rs of 2 passed through the first two stages, but stopped at rr (the still later rs of 3 remained unchanged, though in Umbrian the rs of 2 and 3 have the same history). But it should be pointed out that the assumption of a double development in Oscan, according as the rs was original or arose through syncope, rests wholly on the form teer[úm, and that for this a different explanation is at least possible, though somewhat complicated (see 76, 4). Barring this word, we should assume that Oscan, like Latin, had rr for the rs of 1 as well as for that of 2, and at least one of the examples under 2, namely sverrunef, would be more naturally put under 1. Further material, such as a form corresponding to U. tursitu, is necessary to settle the matter conclusively. (O. teras 'terrae'(?), from the Curse of Vibia, might stand for *terrās as well as for *tērās.)

3. Intervocalie rs from rss, earlier rts or rtt (137, 1, 138), remains in Oscan as in Latin, but appears as rf in Umbrian. Thus O. $F\epsilon\rho\sigma\sigma\rho\epsilon\iota$ *Versori', U. $trahuorf\iota$ 'transverse': L. versus.

rs before consonants

- 116. rs before consonants, which in Latin loses r, or in some combinations s, is retained, though in Umbrian the r, as in the case of intervocalic rs, was weakly sounded and often omitted in the spelling.
- 1. rsk. U. persklu, persclu, pesclu 'precatione': L. $posc\bar{o}$ from * $porsc\bar{o}$; here also O. comparascuster 'consulta erit' if from parsc-, not prasc- (see 81, a); U. Turskum, Tuscom 'Tuscum' (cf. Grk. $Tupo\eta voi$, $Tupo\eta voi$).
- 2. rsn. O. kersnu 'cena', kerssnaís, kerssnasias, etc., U. šesna, çersnatur: L. $c\bar{e}na$ from * $kesn\bar{a}$, * $kersn\bar{a}$ (earlier * $kersn\bar{a}$ -, * $kertsn\bar{a}$, from root qert- 'cut', Skt. krt-, etc.; for meaning, cf. Grk. $\delta a is$ beside $\delta a io \mu a i$); U. persnihmu, pesnimu, persnihmu, pesnimu 'precator', denominative from *persk-ni- (146).

Note. For original rsn, which gives L. rn (cernuus), there is no example.

3. rst. 'U. perstu, pestu 'ponito' (?) from *persktōd (146). But O. pestlúm, peessl[úm, indicates that in Oscan the r was lost in the combination rst, or at least in rstl (76, 2).

Final rs

- 117. Final rs becomes -r, as in Latin. Thus O. far, U. far: L. far from *fars (cf. Gen. Sg. farris from *farsis, Goth. barizeins 'of barley'); likewise in the case of rs arising from syncope, U. ager: L. ager from *agers, *agros (91, 2); Nom. Pl. O. censtur 'censores' from *censtor(e)s, U. frater, frateer 'fratres' from *frāter(e)s (90, 1). The spelling frateer points to compensative lengthening. See 76, 3.
 - a. In O. usurs, Acc. Pl., -rs is from -r(e)ss.
- b. Before an enclitic beginning with a vowel U. rs is preserved, like medial rs. Cf. 113, a. Thus U. pars-est 'par erit'.

SI

118. A change of sr to fr, whence in Latin initial fr, medial br ($f\bar{u}nebris$ from $*f\bar{u}nes-ris$), belongs doubtless to the Italic period, and in Oscan-Umbrian we should expect fr in all positions (as, from bh, O.-U. f=L. f, b). A probable example is O. tefúrúm 'burnt-offering', U. tefru-to 'ex rogo', tefra 'carnes cremandas', from *tesro-, *teps-ro: L. tepor, Skt. $t\acute{a}pas$, etc.

Ls

- 119. 1. Of original intervocalic ls, which becomes ll in Latin, and which we should expect to find unchanged in Umbrian (like rs), there is no certain example. For the ls is probably secondary in U. pelsatu etc. (see 262, 1, a).
- 2. Final ls (from -l(i)s, -l(o)s) becomes -l. Thus O. aídil 'aedilis', O. famel 'famulus', U. katel 'catulus', O. Mutíl 'Mutilus', Paakul 'Paculus', etc. O. Upfals and Upils have -ls from -lls (cf. Gen. Sg. Upfalleis).

p

120. p remains, as in Latin. Examples: O. paterei, U. patre 'patri'; — O. prai, U. pre 'prae'; — O. supruis 'superis', U. super 'super'; — U. dupla 'duplas'. For br from pr, see 157, 1.

pt

121. pt becomes ft, just as kt becomes ht (142), and this remains in Oscan. In Umbrian this ft, together with the ft in which f comes from dh (136, a), becomes ht, and this has the same further history as the ht from kt— that is, the h was almost or wholly lost in pronunciation (75, 142). Examples: O. scriftas 'scriptae', U. screhto, screihtor: L. scriptus; — O. ufteis 'voluntatis', uhftis, from *opti-: L. optiō; — so probably, with the same change of secondary pt, U. hahtu, hatu, hatu 'capito' (also subahtu 'deponito', subator 'omissi') from *haftōd, *haptōd, *hapitōd (cf. O. hipid; see 218).

Note. The peculiar spelling of O. uhftis perhaps indicates the beginning of a development like that in Umbrian.

ps

- 122. 1. Before consonants ps becomes s, as in Latin. Thus U. ostendu 'ostendito': L. $ostend\bar{o}$ from *ops-tend \bar{o} .
- 2. Original intervocalic ps is assimilated to ss. Thus O. osii[ns `adsint': L. ob-sint; so perhaps O. essuf, <math>esuf, U. esuf 'ipse', as if L. * $ips\bar{o}$ (197, 5).
- 3. Secondary intervocalie ps remains unchanged in Oscan, but is assimilated in Umbrian. Thus O. upsed 'fecit', úpsannam, etc., but U. osatu, oseto, from *opesā-: L. operor.

b

123. b remains, as in Latin. So O. trííbúm 'domum', tríbarak-kiuf 'aedificatio', U. trebeit 'versatur' (15, 14); — U. kebu: L. cibus.

bh1

- 124. bh, which appears in Latin initially as f, medially as b, is always f. Examples: O. fust, U. fust 'erit', O. fusíd 'esset', U. futu 'esto', etc.: L. $fu\bar{\imath}$, forem, Grk. $\check{e}\phi\bar{\imath}$, Skt. $bh\bar{\imath}$ -; U. fertu, ferest, ferar, etc.: L. $fer\bar{\imath}$, Grk. $\phi\acute{\epsilon}\rho\omega$, Skt. bhar-; O. fratrúm, U. fratrum 'fratrum': L. $fr\bar{\imath}$ ter, Skt. $bhr\dot{\imath}$ tar-; U. alfu 'alba', O. Alafaternum: L. albus, Grk. $\dot{\imath}$ $\lambda\phi\acute{\imath}$ s; O. loufir 'vel': L. libet, Skt. lubh-; O. tfei, U. tefe: L. tibi, Skt. tubhyam; Dat.-Abl. Pl. ending -fs seen in O. luisarifs 'lusoriis' (?): L. -bus (cf. also Skt. -bhyas).
- a. This final -fs, except in the example cited, which is from one of the earliest Oscan inscriptions, is assimilated to -ss, -s; e.g. O. teremniss 'terminibus', ligis 'legibus', U. avis 'avibus'.
 - b. For Umbrian mb from mf, see 161.

Labials and Nasals

- 125. 1. As in Latin, p or b followed by a nasal becomes m. So U. somo 'summum' from *sup-mo-; U. pelmner 'pulmenti': L. pulmentum from *pulpmentum (pulpa); U. tremnu 'tabernaculo' from *treb-no- (cf. L. somnus from *sop-no-, *suep-no-).
 - a. But fn remains. Thus O. Safinim from *Safniom (81): L. Samnium.

¹ For the development of sonant aspirates in general, see 160-161.

- 2. mb becomes mm (cf. nn from nd; 135). Thus U. umen 'unguen' from *omben, with b from g_a^u (151). Cf. L. commutat = combutat (Orelli-Henzen 6404), commutatur = combutatur (CIL. VI 19267).
- a. U. menes 'venies' might have arisen in a compound *kommenes from *kom-benes (O. kúmbened with recomposition), but as all other forms show b (benust, benurent) the m may be merely a graver's error.

t

- 126. In general, t remains unchanged, as in Latin. Thus O. trís, U. trif: L. $tr\bar{e}s$; O. estud 'esto', U. etu 'ito'; O. scriftas 'scriptae', U. screihtor 'scripti', etc.
 - a. At Bantia ti becomes s, as in Bansae 'Bantiae'. See 100, 3, c.
 - b. For change of nt to nd and tr to dr in Umbrian, see 156, 157, 2.

Final t

- 127. 1. Original final t, as in the secondary ending of the Third Singular, became d in the Italic period (early L. feced, sied, etc.); and this d, like original d, remains in Oscan but is regularly dropped in Umbrian. Thus O. deded, U. dede 'dedit'; O. fakilad, U. façia 'faciat', etc. See also 133.
- a. In O. tadait 'censeat' the t is due to an error, as in pocapit beside p]ocapid, púkkapíd (201, 4).
- 2. But final t from earlier -ti (92), as in the corresponding primary ending, remains t in both Oscan and Umbrian, though in Umbrian it was not fully sounded, and, in a few instances, is omitted in the writing. Thus O. faamat 'tendit', U. tiçit 'decet', U. trebeit 'versatur', U. habe, habe 'habet', heri 'vult'.
- 3. The t of final -st and -rt is also frequently omitted in Umbrian. Thus fus, heries, etc. for usual fust, heriest; trioper 'ter' (cf. also L. sem-per): O. petiro-pert 'quater'; U. pis-her 'quilibet' from *-hert, this probably from *-herit (216).

Final nt

128. 1. The history of original final nt is a matter of dispute. The secondary ending of the Third Plural in

Oscan-Umbrian is -ns, e.g. O. deicans 'dicant', U. dirsans, dirsas 'dent' (for omission of n see 108, 1), O. fufens 'fuerunt', U. eitipes 'decreverunt', etc. (also Pael. coisatens 'curaverunt'). It has been held that this comes by regular phonetic change from the original ending -nt, and that the same change is seen in Latin in the numeral adverbs like quōtiēns etc. coming from -ient, -int (Skt. kiyat, etc.). But the Latin forms admit of another explanation, and for Oscan-Umbrian the fact that the -ns is retained and does not appear as O. -ss, or even as -f, indicates that it is of comparatively late origin and could not have come from -nt in the Italic period. See 110 with note.

A more probable view is the following. As original -t changed to -d (127, 1), so original -nt to -nd, and this became -n. In Latin this was mostly replaced by the primary ending, -nt, as was -d in the Third Singular by -t; but a trace of it remains in the old forms like danunt, explēnunt, etc., in which -unt is added after the analogy of legunt etc. In the Oscan-Umbrian period the forms in -n were remodeled in another way, namely by the addition of s, under the influence of the plural endings of nouns, or perhaps more specifically of the Nom. Pl. of n-stems like O. humuns 'homines' etc.¹

- 2. Final nt from earlier -nti (92), as in the corresponding primary ending, remains unchanged. Thus O. stahint 'stant', O. set (for omission of n see 108, 2), U. sent 'sunt', U. furent 'erunt', etc.
- a. In Umbrian there are three examples of omission of final nt, namely surur-o 'item' (VI b 48) beside the usual surur-ont, eru-hu 'eodem' (II b 22) beside usual -hunt, and fefure 'fuerint' (II a 4) for *fefurent (cf. benurent). The latter form is more commonly taken as 3d Sg. Perf. Indic. 'turbavit' from a root fur-, but against this view is the obvious parallelism of the passage with VI a 26. In staheren 'stabunt' the omission of t is due merely to the fact that the following word begins with t.

¹ The above explanation combines a suggestion of Ehrlich, I.F. XI, 299 ff., who thinks that the whole ending -ns was adopted from nouns, with Johansson's assumption of a secondary ending -nd, -n, preserved in L. danunt etc.

tl

- 129. 1. Initial tl, which becomes l in Latin, as in $l\bar{a}tus$ from $*tl\bar{a}tos$, is seen in U. Tlatie, perhaps connected in form with L. Latium.
- 2. Medial tl becomes kl except after s, as in Latin; and the change may well belong to the Italic period. Thus, with the suffix which was once -tlo- (248, 3), O. sakaraklúm 'templum', U. pihaclu 'piaculo', etc.: L. $pi\bar{a}culum$, $p\bar{o}culum$, etc.; but O. pestlúm 'templum' (for peessl[úm see 139, 2). U. persclo 'precationem' is probably persc-lo with suffix -lo-, not -tlo-.

Note. Cf. the Paelignian change of tr to kr in sacaracirix, pristafalacirix, as if L. *sacratrix, *praestibulatrix.

d

130. d remains in Oscan in all positions, and initially in Umbrian. Examples: O. deíkum, deicum 'dicere', U. teitu, deitu 'dicito'; — O. destrst 'dextra est', U. destram-e 'in dextram'; — U. tuves, duir 'duobus'. —— O. edum 'edere'; — O. deded, δεδετ 'dedit'; — O. píd 'quid', pod 'quod', etc.

Umbrian ř, rs, from d

- 131. In Umbrian an intervocalic d regularly appears as \check{r} , rs. For the pronunciation and origin of the character transcribed \check{r} see 25, 27. Examples: te \check{r} a, dirsa 'det': O. didest 'dabit' from a Reduplicated Present as if L. * $did\bar{o}$, *didere; a-te \check{r} afust, an-dirsafust 'circumdederit'; pe \check{r} i, persi 'pede', petur-pursus 'quadrupedibus'; ze \check{r} ef, serse 'sedens'.
- a. In a few words intervocalic d remains. Except for a single form of doubtful meaning and origin (tesedi, tenzitim), these contain an r, so that the failure to change to f, f, seems due to the dissimilatory influence of this r. Thus Coredier, Kureties 'Coredii'; utur 'aquam': Grk. $\delta \omega \rho$; tuder 'finem', tuderato 'finitum', etc. This last is from an original s-stem *tudes-, and where the f is preserved the change of the f takes place, as shown by eturstamu, eturstahmu 'exterminato', from *tur(e)stā-, denominative from *tudes-to- (cf. L. modes-tus).

- b. The occasional omission of r from rs, as in Acesoniam beside Acersoniam (Akeřunie), is parallel to the omission in the case of original rs. See 76, 1.
- c. A few of the minor inscriptions antedate the change of intervocalic d, and show the sign 9 with its original value of d (27), as in dunum dede 'donum dedit'.
- 132. The occasional presence of ř, rs, before and after consonants is due to syncope of an intervening vowel or to transfer from the intervocalic position. So ařpes beside ařepes 'adipibus'; tribřiçu 'ternio' from *tri-p(e)d-ikiōn- (? see 106, a); ař-fertur, ars-fertur, ař-peltu, ařveitu, etc., with the prefix ař-, ars- 'ad-', which gained this form before words beginning with a vowel; meřs, mers 'ius' from *med(o)s, with ř from other forms (not extant) in which the vowel was not lost; teřtu, dirstu 'dato', teřte 'datur', with ř from forms like teřa (131).

Note. In the last two examples we cannot explain the \check{r} as having arisen in the unsyncopated forms *medos and *didetōd, since the syncope here took place in all probability in the Oscan-Umbrian period. The normal development of *did(e)tōd, namely *dittōd, is probably to be recognized in titu, ditu, which interchange with teřtu etc., although these can also be regarded as standing for *dītōd and connected with dia 'faciat'.

a. We find r, r, in place of ř, rs, in mersus, Dat.-Abl. Pl. of měrs, and mersuva, derivative of the same (*medes-uo-);—tertu beside těřtu;—armamu beside arsmahamo 'ordinamini';—tribrisine beside tribřiçu;—ar-veitu, ar-ueitu (once even a-veitu) beside ař-veitu, ars-ueitu;—arfertur beside ars-fertur.

The difference between mersus, mersuva, and mersus is probably only one of spelling. In the Latin alphabet we have regularly rs for rss, as in mers = mers (and even mersi 'ius sit' for merss-si). The sound of rss was not far from rs, and we may assume that when followed by s it was still nearer rs, so that the combination might be written either rss (mersus, mersuva, in III). Perhaps tertu, armamu, are mere mistakes in spelling (O for rss; cf. rsss and corrected by graver to rssss to rssss in rssss to rssss to rssss due to the following rssss.

But the resemblance of ar-veitu, ar-fertur, etc. to early Latin ar-vorsum, ar-fuerunt, etc. suggests that ar- is the form which the prefix regularly assumed before v, f, and does not come from ař-, ars-, which in ař-veitu etc. is analogical (see above), as is the ad- of L. ad- $fu\bar{\imath}$.

b. According to the most probable explanation of dersua, desua 'prosperam' (*ded(e)s-uo-'giving, granting', from *dedos'gift'), tesvam would stand for *tersvam, this to be explained precisely like mersuva (a).

Final d

- 133. Final d, including the d-from earlier t (127, 1), remains in Oscan, but is dropped in Umbrian, in both cases without regard to the quantity of the preceding vowel. Examples: O. pod 'quod', píd 'quid', but U. svepu 'sive' (= O. suae pod); O. deded 'dedit', but U. dede; Abl. Sg. O. toutad, dolud, slaagid, but U. tota, poplu, mani; Imperat. O. estud, actud, but U. futu, aitu; 3d Sg. Subj. O. fakiiad, hipid, but U. façia, combifiansi.
- a. In Oscan there are two examples of h for d, both on the Curse of Vibia, indicating a weakening of the final d in the Capuan dialect. These are: svai puh 'sive' = $suae \ pod$ of the Tabula Bantina; suluh 'omnino', an Ablative used adverbially.
- b. By combination with an enclitic beginning with a vowel, an original final d becomes intervocalic and so is preserved in Umbrian as ř, rs. Thus piř-i, pirs-i: O. píd, L. quid; puř-e, pors-i: O. pod, L. quod; eř-ek: O. id-ic.

Similarly U. -ař 'ad' in the only examples (two) where the next word begins with a vowel, and twice also even when it begins with a consonant. In all other examples the form is -a.

Initial di

- 134. The history of initial di is the same as in Latin. It is preserved in a few Oscan inscriptions of early date, as in early Latin Diovis, but elsewhere the d is lost. So O. Diúveí, $\Delta lov fel$, diuvilam, but Iúveís, Iuveí, iúvilam, U. Iuve, Ioui.
- a. It is doubtful if the $*di\bar{e}kolom$ to which Bantian zicolom 'diem' points contains original di. It may be from $di\bar{e}$ -, like L. $di\bar{e}s$, with dialectic change of i to i. See note to 100, 3, c.

nd, dn

135. nd becomes nn, usually written n in Umbrian (25, 26). So the Gerundives O. úpsannam 'operandam,' sakrannas, eehiianasúm, U. pihaner, anferener, etc.; — O. pan, pam 'quam': L. quamde; — U. ponne, pone, O. pún, pon 'eum', from *ponde as if L. *quomde like quamde; — U. ostendu, ustentu from * $ostennet\bar{o}d$: L. ostendito (see also 156); similarly ampentu 'impendito', endendu 'intendito', etc.

In the case of *ndl* the change to *nnl*, *nl*, with the further change of *nl* to *ll* (107, 3), led to such forms as U. apelust 'impenderit', entelust 'intenderit', which are based upon -pend-lo-, -tend-lo- (226).

a. U. une is probably from *udne, Abl. Sg. of utur, i.e. *ud $\bar{o}r$: Grk. $\"volume{o}\omega \rho$. The relation of O. Perkens to Gen. Perkedne is not clear.

dh 1

- 136. dh, which appears in Latin initially as f, but medially as d or b according to the surrounding sounds, is f in both positions. Examples: O. fakiiad, factud, U. facia, fakust, etc.: L. $faci\bar{o}$, Grk. $\tau i\theta \eta \mu i$, Skt. $dh\bar{a}$ - (root $dh\bar{e}$ -); — O. fíísnú 'fanum', U. fesnaf-e: L. fānum, fēstus, etc. (probably from the same root as the preceding); — O. feihúss 'muros': L. fingō, Grk. τείχος, Skt. dih- (root dheigh-); — U. furu: L. forum, Grk. $\theta \dot{\nu} \rho \bar{a}$, Eng. door. — O. mefiai 'in media': L. medius, Skt. mádhya-; — O. Aiifineis: L. Aedinius, aedes, Grk. aiθos, Skt. édha-; — U. combifiatu 'nuntiato': L. $f\bar{\imath}d\bar{o}$, Grk. $\pi\epsilon i\theta\omega$, or: Grk. $\pi \nu \nu \theta \acute{a}\nu o \mu a \iota$ (86, a; in either case the f represents dh). —— U. rufru 'rubros': L. ruber, Grk. ἐρυθρός, Skt. rudhirá-; — O. Lúvfreís 'Liberi': L. $l\bar{l}ber$, Grk. $\epsilon\lambda\epsilon\nu\theta\epsilon\rho\delta\varsigma$; — O. staflatas 'statutae', U. staflarem "stabularem': L. stabulum, stabilis, with suffix -flo-, Grk. -θλο-, orig. -dhlo-; — U. uerfale 'templum': L. verbālis, verbum, Goth. waurds, Eng. word.
- a. Here belong also U. Acc. Pl. uef 'portiones' from *ueif-f, and U. vetu 'dividito' from *ueif(e)tod: L. $d\bar{\imath}$ - $vid\bar{\imath}$, Skt. vindháte, etc. In vetu the f has passed through the same development as that of ft from pt (121).

Dental + s

137. 1. A dental is assimilated to a following s, as in Latin, and the change to ss doubtless belongs to the Italic period. Thus U. revestu 'revisito': L. $v\bar{\imath}s\bar{o}$ from *ueid- $s\bar{o}$; — U. Fiso 'deo Fidio', O. Fiísíais '*Fisiis': L. $f\bar{\imath}sus$ from * $f\bar{\imath}d$ -s-o-(cf. $f\bar{\imath}dus$ -tus).

¹ For the development of sonant aspirates in general, see 160-161.

2. But secondary ts, due to the syncope of an intervening vowel or to a late combination, remains under the designation z in the native alphabets, appearing as s in the Latin alphabet. Thus O. húrz 'hortus' from *hortos (90, 1); — U. taçez, tases 'tacitus' from *taketos; — O. az 'ad' from *ad-s (cf. L. ab-s etc.); — O. puz, pous 'ut', U. puze, puse, from *put-s (202, 6). O. aserum 'adserere' is ambiguous, since it is not found in the native alphabet, but probably belongs here rather than under 1; here also U. ostensendi 'ostendentur' from *ostend(e)senter.

Note. It is uncertain whether the s of the Latin alphabet also denoted ts, or whether the sound had actually become s. It has been suggested that U. zeřef 'sedens' with z for s is an indication that even before the native alphabet was abandoned, a change had taken place so that the sound of z was practically s. But there are no examples of s in place of z in the native alphabet, and U. zeřef has also been explained as arising in a compound like *anzeřef (cf. anzeriatu, 110, 1). Still, if the analysis of U. pruzuře as *prō-sode (94) were more certain, it would add weight to the first suggestion.

Dental + Dental

- 138. The combination of the final dental of a root with the t of a suffix shows the same treatment as in Latin, and had doubtless become ss, or st before r, in the Italic period. Examples: O. Fερσορει '*Versori' (U. trahuorfi 'transverse' with rf from rss; see 115, 3): L. versus, earlier *versus, from *vert-to-1; U. sesust 'sederit', probably based on a participial stem *sesso-: L. sessus (*sed-to-1); O. usurs probably: L. ōsor (*ōd-tōr1); U. frosetom 'fraudatum': early L. fraussus (*fraud-to-1). O. luisarifs probably as if L. *lūsāribus from lūsus (*loid-to-1); O. castrous, U. castruo: L. castrum (*cat-tro-1; cf. cassis from *cat-ti-).
- a. In the case of dh+t, the normal phonetic development is different, the combination becoming ddh in Indo-European, and resulting in st in Italic, e.g. L. $cust\bar{o}s$: Grk. $\kappa \acute{o}\sigma \theta o s$, Goth. huzd 'hoard', from *kudh-to-¹ (for root of. $\kappa \acute{e}\acute{v}\theta \omega$, Eng. hide). So L. hasta, U. hostatu 'hastatos', from *ghadh-tā¹ (cf. Goth. gazds 'sting'); probably U. ufestne 'operculatis'(?) from *op-fest(i)no-, an extension of *festo- from *bhendh-to-¹ (root bhendh-, Eng. bind, seen also in L. offendix 'knot').

¹ So written for convenience in showing the root. These combinations were partially transformed even in the parent speech,

But in most cases this development has been interrupted by an analogical restoration in prehistoric times of the t of the suffix, so that ddh was replaced by $dt_t(tt)$, which then became ss in Italic, as usual. Thus L. iussus, not *iustus, though from a root ending in dh. There is, then, no difficulty in the assumption (189, 1) that O. messimass 'medioximas'(?) comes from *medh-tmmo-(Skt. mádh-ya-), and O.-U. nessimo- 'proximus' (cf. O.Ir. nessam 'next') from *nedh-tmmo- (Skt. nah- 'tie', Partic. naddhá-), though the latter may also come from ned-, a by-form of nedh-, seen in Skt. nédiṣṭha- 'next', Av. nazdišta-. O. nistrus 'propinquos' is also, probably, from *nedh-tero- (*neddhero-), either through *nestero- with the same development as in L. custōs, or through *nettro- with restored suffix and syncope, and subsequent development as in L. castrum (in the latter assumption there is a chronological difficulty, though not an insurmountable one).

Other Combinations of Dentals

- 139. 1. A dental is assimilated to a following k, p, or f, as in Latin. Thus O. púkkapíd, pocapit 'quandoque', a compound of pod, probably *pod-kād-pid; O. perek., U. percam, from *pertkā: L. pertica; O. akkatus 'advocati' (89, 3, 102, 3); U. appei, ape 'ubi' probably from *ad-pe (202, 8); U. Acc. Pl. capif 'capides' from *kapid-f (kapiř is a mistake due to ř in other case-forms); O. aflukad from *ad-flok- (? see 97, a).
- a. A remarkable assimilation of d to a preceding k or s must be assumed for O. ekkum 'item' and O. fussu 'iidem', if these contain the enclitic dom. But see 201, 5.
- 2. A loss of t in the combinations stm, stn, and stl, subject to special local or chronological conditions, is seen in O. posmom 'postremum' beside pustm[as; U. pusnaes beside <math>pustnaiaf 'posticas'; O. peessl[úm (for ss, see 162, 2) beside <math>pestlúm 'templum'. So in Latin, with subsequent loss of s, pomerium from *postmoiriom, pone from *post-ne (U. postne), lis from slis, stlis. Cf. also U. pusveres beside $post\ uerir$ 'post portam'.

THE GUTTURALS

140. It is necessary to distinguish between the two series of gutturals known as the palatals and the labiovelars. The palatals appear as simple k-sounds in the western languages (Greek,

Latin, Celtic, Germanic), conveniently known as the centum-languages, while in the eastern group (Indo-Iranian, Balto-Slavic, Armenian, Albanian), known as the satem-languages (Avestan satem = L. centum), they develop into sibilants (like L. c, g, before e, i, in the Romance languages). The labiovelars, which were pronounced well back on the soft palate and with an accompanying rounding of the lips, appear as simple k-sounds in the satem-languages, while in the centum-languages the rounding of the lips has resulted in a distinct u-sound closely following the guttural, giving what may be called ku-sounds. This u-element may remain distinct, as in Latin qu, or may unite with the guttural to form a labial, as in the Oscan-Umbrian p. It is one of the chief characteristics of Oscan-Umbrian as compared with Latin that the labiovelars appear regularly as labials.

There is still a third series of gutturals, called the pure velars, which remain simple k-sounds in both groups, showing neither the u-element in the centum-languages nor the development to sibilants in the satem-languages. But since within either group this series is identical with one of the other two, it will be necessary here, where we are for the most part only comparing Oscan-Umbrian with Latin, to distinguish only two series, the one which shows the u-element and the one which does not.

We shall treat, then, the k-sounds, which include the Indo-European palatals (\hat{k} etc.) and the pure velars (q etc.), and the $k\underline{u}$ -sounds, which represent the labiovelars ($q\underline{u}$ etc.).

k

141. k appears as k, c, as in Latin. Examples: O. censaum, keenzstur: L. cēnseō, cēnsor, etc.; — U. kanetu, procanurent: L. canō; — O. deíkum, deicum, dicust, U. dersicust (from *dedicust): L. dīcō; — O. Dekmanniúís '*Decumaniis', U. tekuries, dequrier 'decuriis': L. decem.

a. It is uncertain whether ku (i.e. I.E. $\hat{k} + u$) remained unchanged or became p like ku (I.E. qu). Cf. L. equus from $e\hat{ku}$ 0- and sequor from equ-. For the former would speak U. ekvine, if connected with L. equinus, — for the

latter, the gentiles *Epidius* etc., found in Latin inscriptions from Oscan-Umbrian territory, if they belong with L. *Equitius* etc. and are genuine O.-U. forms.

b. In Umbrian a final k is often omitted in the writing, e.g. ere, ere, beside erek, erec: O. izic. See 201, 1.

kt

- 142. But before t a k became a spirant and then simply h, so that the combination kt appears as ht in both Oscan and Umbrian. In Umbrian, however, the h was weakly sounded or wholly lost, as is evident from its frequent omission in the writing, and the preceding vowel was lengthened. See 75. Examples: O. ehtrad, U. ap-ehtre, from *ek-tro-: L. extrā, etc.;—O. Úhtavis: L. Octāvius;—U. rehte: L. $r\bar{e}ct\bar{e}$;—O. saahtúm, U. sahta, satam, sahatam: L. $s\bar{a}nctus$;—U. uhtur: L. auctor; U. speture: L. (in-)spector.
- a. It is possible that the same change from k to h should be recognized before p, examples of which would be O. ehpeilatas 'erectae', and ehpreivid, of uncertain meaning, on a fragmentary inscription. But the eh may be due to extension from compounds of words beginning with t.
- 143. Secondary kt, resulting from the syncope of an intervening vowel, has an entirely different history. It remains unchanged in Oscan, while in Umbrian it appears as it, the k having passed through the same development as in French fait from L. factum. Examples: O. factud: L. facito; O. actud: L. agito; O. uincter: L. vincitur; U. aitu, aitu: O. actud; U. teitu, deitu 'dicito' from *deik(e)tōd (the original diphthong is represented by the e only; see 65); U. feitu, feitu, fetu, feetu 'facito' from *fēk(e)tod (219). Here belongs also U. -veitu (ařveitu, arsueitu 'advehito', kuveitu 'convehito') from *uektōd, this from original *ueghetōd (160).

Umbrian palatalization of k

144. In Umbrian a k before the vowels e and i, and before consonantal i, becomes a sibilant, written c, c, or often simply c. This recalls the development of Latin c before palatal vowels in the Romance languages, as in French cent etc. The precise

pronunciation of the Umbrian sound, the difference between it and the ordinary s, is of course uncertain. It may have been s (i.e. Eng. sh) or s (palatal s). As regards the use of s for s, it is comparatively rare initially, but between vowels vastly more common than s. Examples: sesna cenam, cersnaur cenati: L. cēna, O. kersnu; — sihitu, sihitu: L. cīnctus; — pase (15 times, always s): L. pāce; — taçez, tases (14 times, always s): L. tacitus; — desenduf: L. decem; — tiçit: L. decet; — ançif: L. ancus, uncus; — skalçe-ta, scalse-to: L. calice; — curnase cornice (Acc. Sg. curnaco). Observe also pesetom peccatum from pecceto: L. peccō from petcō. Further, with consonantal i, which is frequently omitted in the writing, façia, façiu, façu: L. faciō; — Sansie, Sansie, Saçe: L. Sancius (Sancus); tribřiçu ternio beside Abl. Sg. tribrisine (-ik-jōn-, -ik-īn, 181); — purdinsiust porrexerit, purdinsust, purtinçus, etc. (nki-Perfect, 229).

We find also \mathfrak{gl} , \mathfrak{sl} , in a number of words, but in these the palatalization of the k is due to a following e which has been lost by syncope after having affected the k. Thus tiqlu 'dedicationem' from *dik-elo-; — $preui\hat{s}latu$ (also preuilatu by engraver's error) '*praevinculato', denominative from *uink-elo-: L. vinculum; — $struh\mathfrak{gla}$, $stru\hat{s}la$ '*struiculam' from *struuikela-. But when k is preceded by s it is not affected, e.g. veskles, vesclir 'vasculis' from *ves-kelo-. The instrumental suffix -klo- remains unchanged, since this does not come from -kelo- like the diminutive suffix. So pihaklu, pihaclu 'piaculum', etc.

- a. In several words we find k unchanged before e or i. In some this is due to the analogical influence of other cases in which the k is followed by another vowel, as Gen. Sg. Naharcer after Naharcom. So probably also forms of the Dat. Sg. and Dat.-Abl. Pl. like fratreci, todceir, etc. though in these e, i, comes from earlier oi. Cf. also Pupřike beside Pupřiçe etc. A few forms occurring in the oldest tables may be regarded as survivals from a period antedating the process of palatalization, e.g. kebu: L. cibus. The origin of Akeřunie, Acersoniem, and its relation to O. Akudunniad are obscure. For cehei accensum sit'(?), ku-kehes, there is no satisfactory etymology (connection with Grk. $kal\omega$ from * $kaf-i\omega$ impossible).
- b. For original ki, which regularly appears as ci, si, or ci, si, si, or ci, si, or ci, si, or ci, si, or ci, si, si, or ci, si, si, or ci, si, or ci, si, or ci, si, or ci, si, si, or ci, si, or ci, si, or ci, si, si, or ci, si, or

*pik-jo- (for e for i see 45): L. piceus. The reason for this is not apparent, and some prefer to assume an error in usaie and to reject the comparison of peiu with L. piceus. But peiu denotes some color, contrasted with rufru 'rubros', and the meaning 'piceos' is so strikingly suitable that in spite of the difficulty in the form, we prefer to accept the connection. Cf. also feia 'faciat' (219).

ks

145. 1. Before consonants ks becomes s. Thus O. destrst 'dextra est', U. destram-e 'in dextram'; — U. sestentasiaru 'sextantariarum'; — *persk-, *porsk-, etc. (97) from *perk-sk- (cf. L. poscō, *porscō from *pork-sk-, beside precor), in U. persclo 'precationem', persnihimu 'precator' (see 146), etc., beside pepurkurent 'poposcerint', and in O. comparascuster 'consulta erit' beside kú]mparakineis.

Note. The reduction to s in the examples given belongs to different periods. In *persk- it is probably Indo-European, in sestentasiaru Italic, in destret Oscan-Umbrian.

- 2. Final ks, both original and secondary, becomes ss, s. Thus O. meddiss, meddis 'meddix' (Gen. Sg. medikeis); also Nom. Pl. meddiss from *meddik(e)s (90, 1); U. uas 'vitium' from *uak(o)s (cf. L. $vac\bar{o}$). But sometimes the k is restored under the influence of the oblique cases, e.g. O. Nom. Pl. $\mu\epsilon\delta\delta\epsilon\iota\xi=$ meddiss, O. túvtíks 'publicus', U. fratreks, fratrexs '*fratricus'.
- 3. Intervocalic ks is seen in O. eksuk 'hoc', exac 'hac', etc., to which corresponds U. esu, esu, essu 'hoc', esa 'hac', etc. It is uncertain whether this ks is original or secondary. If the latter, compare O. úpsannam: U. osatu (122, 3).

Loss of k between consonants

146. Loss of k (in part from $k^{\underline{u}}$ by 153) between consonants is seen in O. molta, U. muta: L. multa, mulcta (mulc \bar{o}); — O. fortis 'potius': L. fortis, forctis; — U. Urnasier '*Urnariis': L. urna from *urcnā (urceus); — O. turumiiad 'torqueatur', denominative from *torkmo-, *tork \bar{u} -mo-: L. tormentum (torque \bar{o}); — U. persnihimu 'precator', denominative from *persk-ni- (*persk-from *perk-sk-, 145); — U. perstu 'ponito'(?) from *persk(e)tod

(cf. peperscust); — O. Púntiis, U. puntes 'pentads', from * ponk-t-, * ponk-t- (153), beside O. $Ho\mu\pi\tau\iota\varepsilon$ s and pomtis 'quinquiens' from * pomptis, with p after * pompe 'quinque' (cf. L. $Qu\bar{\imath}ntus$, $Qu\bar{\imath}nctus$); — similarly, where the combination is due to syncope, U. anstintu 'distinguito' from *- $stinkt\bar{\imath}od$, *-stink- $ut\bar{\imath}od$ (153), but ninctu 'ninguito' with the guttural restored from unsyncopated forms prior to the labialization in the latter (or were n and nc two spellings for the same sound, namely the guttural nasal?).

a. In the examples of nt from nkt the k of the latter is from k_{\cdot}^{u} (153). In the case of original nkt (i.e. with I.E. \hat{k}) the nasal was lost and the kt became ht, as elsewhere. See 73, 142.

b. U. kunikaz, conegos 'conixus' shows the same reduction of nkn to n as L. $c\bar{o}n\bar{\imath}ve\bar{o}$ (root kneiguh-, Goth. hneiwan).

g

- 147. 1. Original g is for the most part unchanged. Examples: O. Genetaí 'Genitae'; O. aragetud 'argento'; O. ligud 'lege'; O. tanginúd 'sententia': L. tongitiō; U. ager 'ager'.
- 2. Initial gn remains in Oscan, but appears as n in Umbrian. Thus O. Gnaivs 'Gnaeus'; U. natine: L. $n\bar{a}ti\bar{o}$ from * $gn\bar{a}ti\bar{o}$ ($g\bar{e}ns$); naratu, naraklum: L. $n\bar{a}rr\bar{o}$, $gn\bar{a}rus$.
- 3. An Italic change is that of intervocalic gi to ij, the first ij then forming a diphthong with the preceding vowel. For to L. maior from *magiōs (magis, magnus), maius, Maius, etc. belong O. Maiiúi 'Maio' (see 100, 2), with Nom. Sg. Mais, and mais¹ 'magis, plus', from *maijos (91, 1). Cf. also U. aiu 'agitationes, disturbances' (?), probably from agio.
- a. In *maistero- (whence U. mestru 'maior') and *maisemo- (whence O. maimas 'maximae', 114, b), the *mais- may also be from *mailes (cf. L. maiestās), but more probably has replaced magis (cf. L. magister) under the influence of forms like O. mais. O. Maesius 'mensis Maius' (Festus) seems also, in contrast to L. Maius, O. Maiiúí, to be formed directly from mais.
- 4. Assimilation of g to a following f is seen in U. Acc. Pl. frif 'fruges' from * $fr\bar{u}g$ -f (59).

¹ According to another view, once held by the author also, these words are not cognate with L. magis, maior, etc. but with Goth. mais (Eng. more etc.).

Umbrian palatalization of g

- 148. Corresponding to the palatalization of k before e and i is the Umbrian change of g to a sound which is represented by i. Thus muieto 'muttitum' beside mugatu 'muttito' (cf. pruseçetu, proseseto 'prosecta' beside prusekatu 'prosecato'); eveietu 'voveto' from * \bar{e} - $u\bar{e}g\bar{e}t\bar{o}d$, * \bar{e} - $ueig\bar{e}t\bar{o}d$ (L. victima, Germ. weihen).
- a. An apparent example of palatalization of g by a preceding i is seen in **liuvina**, Iiouinur, Iouinur, etc. beside **lkuvins** 'Iguvinus'. But the mediæval and modern forms of the name preserve the g, and it has been suggested that the spelling cited is due to a "pious fraud" of the priests who wished to connect the name of the city with that of the divinity. Cf. **luve**, Iouie, Iiouie, etc.

gh

- 149. gh appears as h, as in Latin. Examples: O. húrz, húrtúm: L. hortus, Grk. $\chi \acute{o}\rho \tau os$; O. humuns 'homines', U. homonus 'hominibus': L. $hom\bar{o}$; O. hu[n]truis 'inferis', U. hondra 'infra', hondomu 'infimo': L. humus etc. (15, 5); O. herest 'volet', U. heriest 'volet', etc.: L. horior etc. (15, 1); O. heriad 'capiat', h]erríns 'caperent': L. $h\bar{e}r\bar{e}s$, Grk. $\chi \acute{e}\acute{\iota}\rho$, Skt. $h\acute{a}r\bar{a}mi$ 'hold'; O. feihúss 'muros': Grk. $\tau \acute{e}i\chi os$ (L. $fing\bar{o}$ with g for gh after n); O. $fing\bar{o}$ (g for gh after a consonant); O. $fing\bar{o}$ (g), gh after a consonant); O. fing (gh), gh), gh) gh) (gh) (gh) (gh) gh) (gh) (
- a. Umbrian h was so weakly sounded that, as in Latin, the letter is sometimes omitted, or, vice versa, employed where it has no etymological value. Thus eretu beside usual heritu 'optato' (: heriest 'volet' etc., above); an-ostatu beside an-hostatu, hostatu 'hastatos': L. hasta; enclitic -ont after consonants beside -hont after vowels (er-ont, eri-hont 'idem' etc., 195); eitipes from *eitom hipens (84, 264, 2); hebetaf-e beside ebetraf-e 'in exitus' from *ē-baitrā (L. baetō); habina 'agnas': L. agnus (? or: Skt. chágā 'goat', in which case the h is etymological); Hule, holtu 'aboleto'(?), perhaps from a root ol- (Grk. δλλνμι etc.).
- In O. Herukinai 'Erycinae' the h is due to the influence of Herentatei, of which it is an epithet.

b. The substitution of f for h, in folus for holus and other forms cited by Latin writers, and in Faliscan foied 'hodie', seems to have been characteristic of rustic Latin and some of the neighboring minor dialects. It is possible that U. felsva is a borrowed technical term originating in regions where this change
was made. For, certainly, the comparison with L. holus is more attractive than any other explanation offered.

For U. era-font beside era-hunt 'eadem', see 201, 6.

ku

- 150. ku, L. qu, appears as p. Examples: O. púd, pod, U. puř-e: L. quod; O. píd, U. piř-e: L. quid; U. panta: L. quanta; O. petiro-pert 'quater', U. petur-pursus 'quadrupedibus': L. quattuor; *pompe (O. púmperiais, U. pumpeřias): L. quānque.
- a. Both O.-U. *pompe and L. quīnque are from an Italic *k¼enk¼e, though this comes by consonant-assimilation from an earlier *penk¼e (cf. Grk. $\pi \acute{e}\nu \tau \epsilon$, Skt. páñca).

gu

151. g_{ν}^{u} , Latin v or (after n) gu, appears as b. Examples: O. kúmbened 'convenit,' U. benust 'venerit': L. veniō (Eng. come); — O. bivus 'vivi': L. $v\bar{v}vus$ (Eng. quick); — U. berus 'veribus': L. $ver\bar{u}$; — U. bum 'bovem' (Eng. cow; L. $b\bar{o}s$ is borrowed from some O.-U. dialect); — U. umen 'unguen' from *omben (125, 2): L. unguen; — U. habina: L. agnus (? see 149, a).

gµh1

- 152. $g_{\nu}h$, Latin f (initially), v (between vowels), or gu (after n), appears as f. Thus U. vufru 'votivum', vufetes 'votivis': L. *uoueto- (whence $v\bar{o}tus$, like $m\bar{o}tus$ from *moueto-), $vove\bar{o}$ (cf. Skt. $v\bar{a}ghat$ 'sacrificer', Grk. $\epsilon v\chi o\mu a\iota$, root $ueg_{\nu}h$ and $eug_{\nu}h$ -). Unquestionable examples of initial f from $g_{\nu}h$ are wanting.
- a. U. uouse is commonly translated 'voto' and regarded as corresponding in form to a L. *vovicio-. But there is no adequate explanation of the uou- in its relation to the vuf- of the other forms.

 $^{^{1}}$ For the development of sonant aspirates in general, see 160–161.

Loss of u in ku etc.

- 153. The u of kv etc. is lost before another consonant, as in Latin coctus beside $coqu\bar{o}$, $qu\bar{i}ntus$ beside $qu\bar{i}nque$, etc. Thus O. Púntiis, U. puntes 'pentads', from "ponk-t- (146), "ponkv-t-, beside "pompe with the usual development of kv (150), while in O. $\Pi o \mu \pi \tau \iota e s$ and pomtis the labial is analogical. See also 146. The same loss occurs in combinations resulting from syncope, showing that the latter process antedates the change of kv etc. to p etc. Thus U. fiktu 'figito' from "fikv $t\bar{o}d$, "figv $t\bar{o}d$ ": L. $f\bar{i}g\bar{o}$, earlier $f\bar{i}v\bar{o}$; O. fruktatiuf 'fructus' from " $fr\bar{u}kv$ t-, $fr\bar{u}gv$ $t\bar{o}d$ (146), "- $t\bar{o}d$, "- $t\bar{o}d$, "- $t\bar{o}d$," U. $t\bar{o}d$ (146), "- $t\bar{o}d$, "- $t\bar{o}d$, "- $t\bar{o}d$," U. $t\bar{o}d$, "see 161).
- a. U. umtu 'unguito' instead of *untu or *unktu is an analogical form like O. pomtis, m in this case coming from forms like *ummō, *umbō (cf. umen from *omben: L. unguen; 151).
- b. U. subocau 'invoco' agrees with L. $voc\bar{o}$, the k probably originating in Nom. Sg. * $u\bar{o}ks$ (L. $v\bar{o}x$) from * $u\bar{o}ku$ s (Grk. $\xi\pi\sigma s$, $\delta\psi$). In U. kunikaz, conegos 'genu nixus' (as if L. * $c\bar{o}nig\bar{a}tus$ for * $c\bar{o}niv\bar{a}tus$): L. $c\bar{o}n\bar{v}e\bar{o}$, Goth. hneiwan 'kneel' (root kneiguh-), the simple guttural might be attributed to the influence of forms such as L. $n\bar{v}xus$, $n\bar{v}ct\bar{o}$, but in that case it is not clear why we have not *conecos.
- 154. Loss of the u before a following u, as seen in L. $qu\bar{u}n$ cuplex beside $qu\bar{u}nque$, etc., is perhaps to be recognized for Oscan-Umbrian also, and so attributed to the Italic period. But the material is meagre and indecisive. Examples would be U. prusikurent 'pronuntiaverint': L. inseque (but it is fully as likely that the k in this, as in the probably related U. sukatu and in L. $\bar{i}nsece$ beside $\bar{i}nseque$, is due to the influence of forms like L. $\bar{i}nsecti\bar{o}$, in which the u was lost before the following consonant); U. *arkelo-, whence arçlataf 'arculatas' (144), instead of *arpelo-, perhaps due to the analogy of *arku- as L. $arciten\bar{e}ns$ for $arquiten\bar{e}ns$ is due to arcu-.

¹ We are justified in assuming that the Oscan-Umbrian forms go with the Latin, even though the $g^{\mathcal{U}}$ in these forms is not Indo-European. See Brugmann, Grd. I², p. 603.

The p in O. puf, U. pufe 'ubi' and O. puz, U. puze 'ut' must then be attributed to the influence of forms like O. púd, píd, etc.

a. L. ubi, ut, etc. are variously explained, but there are no serious objections to the view that they represent the regular Latin development of initial $k_{\perp}^{y}u$.

Change of Surd Mutes to Sonants

- 155. The change of nkl to ngl, seen in L. angulus from *anklo- (ancus), doubtless belongs to the Italic period. Thus O. ungulus 'anulus' (Festus): L. uncus; U. anglom-e 'ad angulum'; U. anglaf 'oscines' (g 6 times, but twice e) from *an-klā-(L. $el\bar{a}m\bar{o}$; cf. oscen from $can\bar{o}$).
- 156. In Umbrian, nk, nt, except when final, become ng, nd. Thus inengar: L. invenca; ander: O. anter, L. inter; Passives tursiandu, ostensendi, with endings -tor (L. -tur), -ter (U. herter, O. uincter); ostendu 'ostendito' from *os-tentu, this from *os-tennetōd (135), similarly andendu, endendu 'intendito' from *an-tentu, *en-tentu; hondra 'infra': O. hu[n]truis 'inferis'; hondomu 'infimo': L. -tumo-.

Note. This change is later than the palatalization of k, as is shown by ancif and preuislatu (144).

- 157. 1. A change of medial pr to br is regular in Umbrian. Thus subra, subra 'supra', kabru 'caprum', cabriner 'caprini', abrof 'apros', abrunu 'aprum'. In supru, kaprum etc., apruf, the p probably stands for b, as not infrequently elsewhere (30, 6). In Oscan also we find embratur 'imperator' and Abella- (Abellanús) probably from $*Apro-l\bar{a}$ (91, 2), but usually pr remains (supruis etc.).
- 2. A similar change of tr to dr is seen in a few words, though usually tr remains (U. fratrom, O. fratrum, etc.). Thus U. podruh-pei 'utroque': O. puturs-pid from *po-tro- (81); O. Sadiriis 'Satrius' (81); U. adro 'atra', O. Aderl. 'Atella' from $Atro-l\bar{a}$ (see 91, 2, and note; but it is possible that dr in this case is original, becoming tr in Latin, as in taeter from *taed-ro-).

Note. The reasons for the variation in the representation of tr and (in Oscan) of pr are obscure.

158. Other, more isolated examples are U. Padellar from *Patno-lā- (91, 2, a), with which may be compared L. scabellum from *scap-no-lo- (scāpus), dignus from *dec-no-, etc.; — O. degetasis, degetasis, beside deketasisi, from *dekentāsio-, the explanation of the g being doubtful (cf. L. $v\bar{\imath}gint\bar{\imath}$?); — U. todcom-e in urbicum', todceir, beside totcor (cf. O. touticom), the d being probably a graphic vagary due to the following tuder.

Change of Sonant Mutes to Surds

159. The change of sonant to surd before a following surd mute is an Indo-European process, but repeats itself in the case of combinations arising through syncope in the Oscan-Umbrian period. Thus O. actud 'agito' from $*ag(e)t\bar{o}d$, U. fiktu 'figito' from $*figu(e)t\bar{o}d$ (153), etc.

a. O. akenei, U. acnu, peracni-, etc., if the frequently assumed connection with L. $ag\bar{o}$ is correct, indicate that ak- in place of ag- was generalized from such forms as L. $\bar{a}ctus$, $\bar{a}cti\bar{o}$ (cf. U. ahtim), reinforced in the Oscan-Umbrian period by forms like O. actud. With this view would agree O. acum on the Tabula Bantina, though no great weight can be attached to this on account of the frequent misspellings (e.g. licud for ligud).

Changes of the original Sonant Aspirates

160. In the Italic period the Indo-European sonant aspirates became first surd aspirates, as likewise in Greek, and then the corresponding spirants. That is, bh, dh, gh, guh, became first

ph, th, kh, kh, kh, then f, p (= Eng. th in thin), χ (= Germ. ch), χ^{μ} . The further changes of p to f, of χ to h, and of χ^{μ} to f, even where common to Oscan-Umbrian and Latin, probably took place independently in each branch. The d of L. medius (O. mefiaí) must come directly from p (cf. also $\lambda^{\ell}\tau\rho\bar{a}$ borrowed from * $l\bar{\iota}pr\bar{a}$, whence L. $l\bar{\iota}bra$); and since in this position Italic f is impossible, it is improbable in the others. Intervocalic χ appears as h in all dialects, but U. -veitu 'vehito' makes it unlikely that it had reached this stage at the time of the Oscan-Umbrian syncope, for this implies * $\mu ekt\bar{\iota}d$ (see 143), which can come from * $\mu e\chi et\bar{\iota}d$, but hardly from * $\mu eh(e)t\bar{\iota}d$.

161. In Latin we find regularly a sonant mute after a nasal; that is, not only mb and nd (in which the sonant would not necessarily be due to the nasal), but also ng and ngu, e.g. $ling\bar{o}$ ($\lambda\epsilon l\chi\omega$), ninguit ($\nu\epsilon l\phi\epsilon l$). The same holds true for Umbrian. Thus:

mb from mf: ambr-(ambr-etuto 'ambiunto') beside O. amfr-(ambr-fret 'ambiunt'), from *amfer, which is formed from *amf(i)- (L. amb-, Grk. $\mathring{a}\mu\phi i$) after the analogy of anter, super, etc. (i.e. *amfer- $e\bar{o}$ after *anter- $e\bar{o}$, L. inter- $e\bar{o}$; cf. L. comb- $\bar{u}r\bar{o}$ after amb- $\bar{u}r\bar{o}$); — here probably also amb-oltu 'ambulato' (Grk. $\mathring{a}\lambda\acute{a}o\mu ai$?); — combifiatu 'nuntiato' from *com-fif-: L. $f\bar{\iota}d\bar{o}$, Grk. $\pi\epsilon i\theta \omega$, root bheidh-(or Grk. $\pi v \nu \theta \acute{a}\nu o\mu ai$, root bheudh-; see 86, 7). For the operation of the process even in composition, see 164, a.

ng from $n\chi$: cringatro 'cinetum': O.Eng.hring 'ring', O.Bulg. $krag \check{u}$ 'circle', root krengh.

For nd from $n\beta$ and for $ng^{\mathcal{U}}$ from $n\chi^{\mathcal{U}}$ there are no certain examples. It would be attractive to derive -uendu (ahauendu 'avertito', preuendu 'advertito') from *uenbetōd (Germ. winden, wenden, root uendh-) through the medium of *uendetōd (like ostendu from *ostendetōd, 156), and ninctu from *nin $\chi^{\mathcal{U}}$ etōd (Grk. vei ϕ et etc.) through *nin $g^{\mathcal{U}}$ etōd (like fiktu from *fīg \mathcal{U} etōd, 153). But the vowel-syncope belongs in all probability to the Oscan-Umbrian period, whereas the change to sonant seems to be Umbrian only, not Oscan (see a with footnote). It is better, then, to assume the development *uenb(e)tōd, *uentōd, uendu, and *nin $\chi^{\mathcal{U}}$ (e)tod, *nink \mathcal{U} tōd (cf. *uexetōd, *uektōd, 160), ninctu.

a. O. ampt 'circum' is obviously connected with *amf(i)-, L. amb-, etc., being formed by the addition of the same -t(i) seen in pos-t, per-t, etc. But

we cannot well derive it from *amf-t with a change of ft to pt, since Oscan shows, rather, the opposite change of pt to ft (121). Nor can we start from *amb-t, since amb- from *amf- is confined to Latin and Umbrian (O. amfr-; see above)¹. The explanation is as follows: In the Italic period *amf- became *am- before certain consonants, e.g. before f (cf. U. an-ferener). This *am- was extended to other forms, and became a regular by-form of *amf- as in L. am-iciō etc. Oscan-Umbrian examples are O. am-viannud 'vico' (cf. Grk. $d\mu\phio\delta o\nu$);—O. amnúd 'circuitu' (16, 2);— probably O. ampu[1]ulum 'ministrum'(?), diminutive from *am-polo- (p from k^{ll}): L. an-culus, Grk. $d\mu\phi l$ - $\pi o\lambda os$;—U. an-ferener 'circumferendi';—U. an-dirsafust 'circumtulerit';—U. aplenia 'impleta, full on both sides';— possibly U. am-peřia (see Glossary).

From this by-form am- was formed *am-t, which became ampt with the same secondary p which is seen in L. $\bar{e}m$ -p- $t\bar{u}s$, $s\bar{u}m$ -p-tus, etc. (cf. also ampter-mini in Festus).

Doubling of Consonants in Oscan

- 162. 1. Doubling of consonants is to be observed in Oscan frequently before consonantal i, and occasionally before r and v. Examples: Mamerttiais 'Martiis'; úíttiuf 'usus' from *oitiōn-; a]íttíúm 'portionum', Gen. Pl. beside Gen. Sg. aeteis (í instead of i is due to the influence of other case-forms, as -ím, -íss, etc.); meddikkiai 'in *meddicia' from *meddik-iā-; tríbarakkiuf 'aedificatio' from *trēbark-iōn-; Dekkieis 'Decii' (Nom. Dekis); kúmbennieís 'conventus' from *kom-ben-io-; teremenniú 'termina' as if L. *terminia; Dekmanniúís '*Decumaniis'; Vítelliú 'Italia', etc. alttram 'alteram', alttreí 'alteri'; púnttram 'pontem'. Dekkviarím 'Decurialem'.
- 2. Doubling of s before t is seen in kvaísstur 'quaestor' (once kvaízstur; influence of keenzstur?); keenzstur 'censor' (nz = nts, 110, 1); pússtíst 'positum est' (? see 84, a), passtata 'porticum' (21). Probably kerssnaís 'cenis' and kerssnasias are also examples of similar doubling, in spite of the fact that they once had etymological ss (116, 2); also peessl[úm (139, 2).
- 3. Appelluneis 'Apollinis', $A\pi\pi\epsilon\lambda\lambda o\nu\nu\eta\iota$, remind us of L. Appuleius beside Apuleius, etc., and the spelling is perhaps due to

¹ The possibility of separating the f of O. amfret from that of *amf(i)-, as advocated by some, and assuming an Italic change of sonant aspirate to sonant after a nasal, has been considered, but given up as improbable. Cf. also O. Verehasiúi: L. $verg\bar{o}$ (? 149).

the influence of compounds like L. appellō etc. Helleviis for usual Heleviis is simply a mistake.

Note. Even for words falling under 1 and 2, the doubling is by no means universal, the spelling sometimes varying for the same word. It is probably an attempt to indicate that the consonant was sounded both at the end of one syllable and at the beginning of the next. Cf. L. quattuor, and the occasional inscriptional spellings such as frattre, aggro, mattrona, asstante, iussta, Vessta, etc. In Greek, $\sigma\sigma\tau$ for $\sigma\tau$ is especially common, and doubling before ι and ρ is found in dialectic inscriptions.

Simplification of Double Consonants

163. In Oscan, which in general, apart from the oldest inscriptions and the Tabula Bantina, faithfully represents double consonants in the writing, there are some examples of single in place of double consonants. But even in these cases it is not clear how far we have to do with anything more than irregularity in spelling. Examples: dadíkatted 'dedicavit' from *dad-dik-(cf. dat 'de'); — echiianasúm 'emittendarum' beside úpsannam etc.; amvíanud 'vico' beside amvíannud; — medíkeís, medíkeí, beside meddíss 'meddix'; medikkiai beside meddikiai; — further, on the Tabula Bantina, medicim, medicatinom, medicatud, beside meddis, meddixud.

Changes in Sentence-Combination. Sandhi.

- 164. The history of initial and final sounds has been included in the general treatment. For crasis etc., see 84. Following is a résumé of the changes of finals.
 - 1. Final short vowels are sometimes lost (92).
 - 2. Final \bar{a} is changed in the direction of \bar{o} (34).
 - 3. Final rs, ls, become r, l (117, 119, 2).
 - 4. Final fs, ks, become ss, s (124, a; 145, 2).
 - 5. Final ns in certain cases becomes f (110, 2, 4, 5).
 - 6. Final t becomes d (127, 1).
 - 7. Final d, including preceding, is lost in Umbrian (133).
 - 8. Final s becomes r in later Umbrian (113).

- 9. Final consonants were weakly sounded in Umbrian, and, with more or less frequency, omitted in the spelling. This is true of all except r from rs, l from ls, and s from fs, ks. Thus m, n (109, 1), r (103, 4; 113, b), f (110, 2, a), t (127, 2), k (141, b), s (113, b). Omission of final nt is rare (128, 2, a).
- a. Changes in Compounds. Noteworthy is the extent to which phonetic changes affecting the initial of the second member of a compound take place in Oscan-Umbrian without interference from the analogical influence of the simplex, if such still existed. Cf. U. subocau from *sub-uok- (102, 2), O. akkatus from *ad-uok- (102, 3), U. endendu from *en-tend- (156), U. combifiatu from *com-fif- (161), U. anzeriatu from *an-ser- (110, 1). A possible, but uncertain, example of such a change even reacting on the simplex is U. menes (125, 2, a).

But the influence of the simplex is sometimes seen, e.g. U. an-ferener (not mb by 161), U. an-dirsafust (not nn by 135), O. kúm-bened (not mm by 125, 2).

Accent

- 165. 1. WORD-ACCENT. The Latin accentual system, based on the quantity of the penult, is comparatively late, having been preceded by a system, dating from the Italic period, according to which the accent stood always on the first syllable. Whether this initial accent was preserved in Oscan-Umbrian or replaced by some such system as arose in Latin, cannot be determined.
- a. There are certain phonetic changes, such as the simplification of double consonants (163), which with added material may prove to be connected with an accentual system like the Latin, but at present the evidence is far from conclusive.
- 2. Sentence-Accent. There is substantial agreement with the Latin. For pronominal enclitics, see 201; for enclisis of personal pronouns, see 86, 3; for that of the indefinite pronouns cf. O. suaepis (usually so written), U. svepis, etc.; for that of the verb 'to be', cf. O. teremnatust, destret (84), pússtíst (84, a), and also O. prúftúset, staflatasset, ehpeilatasset, U. peretomest, ortoest, parsest (117, b), mersest, mersi (132, a), etc. (the writing as two words is also found, but less frequently). With L. quīlibet compare U. pisher (90, 2). The enclitic use of prepositions is far more common than in Latin (299 ff.).

SUMMARY OF THE OSCAN AND UMBRIAN SOUNDS¹

166.

OSCAN

a

a, written a, a,

= orig. a, e.g. ant 'ante'. 32.

= anaptyctic a, e.g. aragetud 'argento'. 80, 81.

ā

 \bar{a} , written a, aa, α ,

= orig. \bar{a} , e.g. aasas 'arae' (Gen. Sg.). 33.

= orig. a with secondary lengthening, e.g. saahtúm 'sanctum'. 73.

ę

e, written e, e,

= orig. e, e.g. estud, estud 'esto'. 36.

= anaptyctic e, e.g. Herekleis 'Herculis'. 80, 81.

in er = ro or ri, e.g. Aderl. 'Atella'. 91, 2.

ē

 $\bar{\mathbf{e}}$, written \mathbf{e} , $\mathbf{e}\mathbf{e}$,

= orig. e with secondary lengthening, e.g. keenzstur, censtur 'censor'. 41, b, 73, 76, 77, 1.

į

i, written i, i,

= orig. i, e.g. pis, pis 'quis'. 44.

= orig. e in hiatus, e.g. iúk, ioc 'ea'. 38, 1.

= anaptyctic i, e.g. amiricatud '*immercato'. 80, 81.

= orig. e in medial syllables before labials, e.g. nesimois 'proximis'. 86.

¹ A survey of the Oscan and Umbrian sounds, with their normal spellings, and their various regular sources. No account is taken here of the spelling of Old Oscan, or of that in the Greek alphabet, for which see 24; and no attempt is made to cover all the details of the preceding sections. Attention is called by means of asterisks to some of the most important differences between Oscan and Latin. Open and close vowels are distinguished by a hook or a dot placed beneath the letter, e.g. e = open e, e = close e.

į

 \bar{i} , written i, ii, i,

= orig. ē, e.g. lígatúís 'legatis', ligud 'lege', fíísnú 'templum'. 41.

= \bar{e} from contraction, e.g. tris 'tres'. 41, a, 82.

į

i, written i, i,

= orig. i by samprasāraṇa, e.g. pústiris 'posterius'. 44, b, 91, 1.

= orig. i before i, e.g. fakilad 'faciat'. 44, a.

Note. Or is the difference from i only graphic?

ī

ī, written i, ií, i,

= orig. ī, e.g. Abl. Sg. slaagid, liímítú[m 'limitum', scriftas 'scriptae'. 47.

? = orig. \bar{u} in final syllables, e.g. castrid. 59.

Q

Q, written ú, o,

= orig. o, e.g. púd, pod 'quod'. 49.

= orig. e, in *pompe 'quinque'. 37.

= anaptyctic o, e.g. tefúrúm 'burnt-offering'. 80, 81.

Ō

ō, written ú, o,

= orig. final \bar{a} , e.g. víú 'via', allo 'alia'. 34.

u

u, written u, u,

= orig. u, e.g. puf 'ubi'. 55.

= anaptyctic u, e.g. Mulukiis 'Mulcius'. 80, 81.

= orig. o before final m, e.g. ezum 'esse'. 50.

= orig. a, e, or o in medial syllables before (or after) labials, e.g. praefucus 'praefectus', pertumum 'perimere'. 86.

= orig. u by samprasārana, e.g. facus 'factus'. 91, 1.

iu (precise sound uncertain)

iu, written iu, u, = u after dentals, e.g. eitiuvam, eituam 'pecuniam'. 56.

ū

 $\vec{\mathbf{u}}$, written \mathbf{u} , $\mathbf{u}\mathbf{u}$, $(\acute{\mathbf{u}})$, u,

= orig. \tilde{u} , e.g. Fuutrei 'Genetrici'. 58.

= orig. \tilde{o} , e.g. estud, estud 'esto', Fluusaí 'Florae'. 53.

ai

ai, written ai, ae (ai),

= orig. ai (or $\bar{a}i$), e.g. svai, suae 'si'. 62 (60), (61, 3).

ei

ei, written ei, ei,

= orig. ei (or $\bar{e}i$), e.g. deikum, deicum 'dicere'. 64 (60), (61, 3).

0i

oi, written úí, oi,

= orig. oi (or $\bar{o}i$), e.g. lígatúis 'legatis', nesimois 'proximis'. 66 (60), (61, 3).

au

au, written av, au, au,

= orig. au, e.g. avt, auti 'aut'. 68, 61, 2.

eu

eu occurs only in the borrowed Evklúí. 70.

ou

ou, written úv, ou,

= orig. ou or eu, e.g. túvtíks 'publicus', touto 'civitas'. 71, 61, 2.

i (consonantal i)

i, written i, i,

= orig. i, e.g. kúmbennieis 'conventus'. 100.

= initial di, e.g. Iúveí 'Iovi'. 134.

u (consonantal u)

 \mathbf{u} , written \mathbf{v} , u,

= orig. u, e.g. svai, suae 'si'. 101, 102.

Note. But when i and u are merely glides following a vowel i or u they are written in the native alphabet, but not in the Latin. 31.

r

 $\mathbf{r} = \text{orig. } r$, e.g. Regatureí 'Rectori'. 103.

= intervocalic rs, e.g. terúm 'territorium'. 115, 1.

= final rs, e.g. censtur 'censores'. 117.

rr = intervocalie rs, e.g. h]erríns 'caperent'. 115, 2.

= ri at Bantia, e.g. herest 'volet'. 100, 3, c.

1

1 = orig. l, e.g. ligud 'lege'. 104, 105.

= final ls, e.g. aidil 'aedilis'. 119, 2.

Il = orig. rl, e.g. Abellanam 'Abellanam'. 103, 3.

= orig. l by secondary doubling, e.g. Vítelliú 'Italia'. 162, 1.

= orig. nl, e.g. Vesulliais 'Vesulliais'. 107, 3.

n

n = orig. n, e.g. ni 'ne'. 107.

nn = orig. nd, e.g. úpsannam 'operandam'. 135.

= orig. n by secondary doubling, e.g. kúmbennieís 'conventus'. 162, 1.

For omission of n before consonants, see 108, 2, 3.

m

m = orig. m, e.g. Maatreis 'Matris'. 107.

For rare omission of final m, see 109, 2.

s

s = orig. s, e.g. estud 'esto'. 111, 114.

= ks before consonants, e.g. destret 'dextra'st'. 145, 1.

= ti at Bantia, e.g. Bansae 'Bantiae'. 100, 3, c.

s(s) = final ks, e.g. meddiss, meddis 'meddix'. 145, 2.

= final fs from -bh(o)s, e.g. teremniss 'terminibus', ligis 'legibus'. 124, a.

= final ns, e.g. Acc. Pl. víass, eituas. 110, 2.

= ps, e.g. osii[ns 'adsint']. 122, 2.

= dental + s, e.g. Fiísíais '*Fisiis'. 137, 1.

= dental + dental, e.g. $F \epsilon \rho \sigma \sigma \rho \epsilon \iota * Versori'$. 138.

= s by secondary doubling, e.g. kvaisstur 'quaestor'. 162,2.

ks, written ks, x,

= intervocalic ks, e.g. eksuk 'hoc', exac 'hac'. 145, 3.

 $=k_{i}$ at Bantia, e.g. meddixud 'magisterio'. 100, 3, c.

ts, written z, s,

= secondary ts, e.g. puz, pous 'ut'. 137, 2.

nts = orig. ns, e.g. keenzstur, censtur 'censor'. 110, 1.

ns = secondary ns, e.g. Bantins 'Bantinus'. 110, 6, 128, 1.

z (as in Eng. zero)

z, written s, z,

= intervocalic s, e.g. Gen. Pl. -asúm, -azum. 112.

= di at Bantia, e.g. zicolom 'diem'. 100, 3, c.

D

 $\mathbf{p} = \text{orig. } p, \text{ e.g. } post \text{ 'post'}.$ 120.

= orig. $k\mu$, e.g. pod 'quod'. 150.

b

 $\mathbf{b} = \text{orig. } b$, e.g. trííbúm 'domum'. 123.

= orig. g_{π}^{u} , e.g. kúmbened 'convenit'. 151.

br = orig. pr, e.g. embratur 'imperator'. 157, 1.

+

t = orig. t, e.g. tris 'tres'. 126.

d

d = orig. d, e.g. deicum 'dicere'. 130, 133.

= final t, e.g. deded 'dedit'. 127, 1.

dr = orig. tr, e.g. Sadiriis 'Satrius'. 157, 2.

k

 \mathbf{k} , written \mathbf{k} , c,

= orig. k, e.g. deíkum, deicum 'dicere'. 141.

= orig. k_{α}^{μ} (g_{α}^{μ}), e.g. fruktatiuf 'fructus'. 153, 154.

kl = orig. tl, e.g. sakaraklúm 'sacellum'. 129, 2.

g

g = orig. g, e.g. aragetud 'argento'. 147, 1. ngl = orig. nkl, e.g. ungulus 'anulus'. 155.

f

f = orig. bh (L. f, b), e.g. fratrum', fratrum', sifei'sibi'. 124.

= orig. dh (L. f, b, d), e.g. fakilad 'faciat', Lúvfreís 'Liberi', mefiaí 'mediae'. 136.

= orig. $g_{x}^{u}h$ (L. f, v, gu). 152.

= final ns of secondary origin, e.g. úíttiuf 'usus'. 110, 5.

fr = orig. sr, e.g. tefúrúm 'burnt-offering'. 118.

ft = orig. pt, e.g. scriptas 'scriptae'. 121.

h

h = orig. gh (L. h), e.g. humuns 'homines'. 149. = k before t, e.g. ehtrad 'extra'. 142.

167.

UMBRIAN

a

a, written a, α ,

= orig. a, e.g. patre 'patri'. 32.

ā

ā, written a, ah, a, ah, aha,

= orig. \bar{a} , e.g. fratrum 'fratrum'. 33.

= orig. a with secondary lengthening, e.g. sahta, sahatam 'sanctam'. 73.

ŝ

 $\dot{\tilde{a}}$ (long rounded \bar{a}), written a, u, o, = orig. final \bar{a} , e.g. vatuva, vatuvu, uatuo. 34.

e

e, written e, e (rarely i, i),

= orig. e, e.g. fertu 'ferto'. 36.

= final i, e.g. ote 'aut'. 43.

ē

ē, written e, eh, e, ee, eh, ehe (very rarely i, i),

= orig. ai (or $\bar{a}i$), e.g. pre, pre 'prae'. 63 (60).

= orig. ei (or ei), e.g. etu, eetu 'ito'. 65 (60).

= orig. e with secondary lengthening, e.g. e-, eh-, e-, e-,

ē

ē, written e, e, i, i, ei (rare), ei,

= orig. \bar{e} , e.g. habetu, habitu 'habeto'. 42.

= orig. oi (or $\bar{o}i$) in final syllables, e.g. Dat.-Abl. Pl. -es, -ir, -eir. 67, 2 (60).

į

i, written i, i, and, in the case of orig. i, frequently e, e,

= orig. i, e.g. piře, peře, pirsi, etc. 'quid'. 45.

= orig. e in medial syllables before labials, e.g. nesimei 'proxime'. 86.

ī

i, written i, ih, i, ihi, ei (rarely e, e),

= orig. $\bar{\imath}$, e.g. persnimu, persnihimu, etc. 'precator'. 48.

? = orig. \bar{u} in monosyllables etc., e.g. pir 'ignis'. 59.

Note. For the five preceding sounds both the letters e and i are employed, but with different relative frequency, as indicated.

Ó

o, written u, o,

= orig. o, e.g. post 'post'. 49.

= orig. u before m, e.g. somo 'summum'. 57.

= secondary u before m, from e, e.g. hondomu infimo'. 86.

ō

ō, written u, o,

= orig. au, e.g. ute, ote 'aut'. 69.

= orig. ou (eu), e.g. tuta, totam: O. touto. 72.

= orig. oi, e.g. pora 'qua': O. poizad. 67, 1.

ō

 $\bar{\mathbf{o}}$, written \mathbf{u} , o, u,

= orig. \bar{o} , e.g. nome 'nomen', Abl. Sg. -u. 54.

u

 \mathbf{u} , written \mathbf{u} , u,

= orig. u, e.g. pufe 'ubi'. 55.

= orig. a or e in medial syllables before labials, e.g. prehubia 'praehibeat'. 86.

= orig. o before r, e.g. curnaco 'cornicem'. 51.

ū

 $\bar{\mathbf{u}}$, written \mathbf{u} , \mathbf{u} h, \mathbf{u} ,

= orig. \bar{u} , e.g. mugatu 'muttito'. 58.

ai

ai, written ai, ai,

= orig. ak before t, e.g. aitu, aitu 'agito'. 143.

= orig. ai before i, e.g. pernaiaf 'anticas'. 61, 3.

ei

ei, written ei, ei,

= orig. ek, or $\bar{e}k$ with \bar{e} from ei or ai, e.g. teitu, deitu 'dicito'. 143.

= orig. ei before i, e.g. Teteies(?). 61, 3.

For the spelling ei, see 29 with a.

i

i, written i, i,

= orig. i, e.g. iouies 'iuvenibus'. 100.

= initial di, e.g. Iuve, Ioui. 134.

ŭ

 \mathbf{u} , written \mathbf{v} , u,

= orig. u, e.g. via, uia 'via'. 101, 102.

= initial l, e.g. vutu 'lavato'. 104.

But when i and u are merely glides following a vowel i or u, they are written in the native alphabet, but not in the Latin. 31.

r

 $\mathbf{r} = \text{orig. } r$, e.g. rehte 'recte'. 103.

= intervocalic (and sometimes final) s, e.g. Gen. Pl. -arum. 112, 113.

= final rs, e.g. ager 'ager'. 117.

For omission of r, see 115, 116.

1

1 = orig. l, e.g. plener 'plenis'. 105, 1.

For omission of l, see 105, 2.

11 = orig. nl, e.g. Padellar 'Patellae'. 107, 3.

n

 $\mathbf{n} = \text{orig. } n, \text{ e.g. } nome \text{ 'nomen'.}$ 107.

For omission of n, see 108, 1, 109, 1.

= initial gn, e.g. natine 'natione'. 147, 2.

nn, written n, n, rarely nn,

= orig. nd, dn, e.g. pihaner 'piandi'. 135.

m

m = orig. m, e.g. Matrer 'Matris'. 107.

For omission of final m, see 109, 1.

S

s = orig. s, e.g. est 'est'. 111, 113 ff.

= ks before consonants, e.g. destram-e 'in dextram'. 145, 1.

= ps before consonants, e.g. ostendu 'ostendito'. 122, 1.

= final ks, e.g. uas 'vitium'. 145, 2.

= final fs from -bh(o)s, e.g. avis 'avibus'. 124, a.

s(s) = intervocalic ks, e.g. essu, esu 'hoc'. 145, 3.

= intervocalic ps, e.g. osatu facito'. 122, 2, 3.

= dental + s, e.g. Fiso 'deo Fidio'. 137, 1.

= dental + dental, e.g. sesust 'sederit'. 138.

ts, written z, s,

= secondary ts, e.g. tacez, tases 'tacitus'. 137, 2.

nts = orig. ns, e.g. antermenzaru 'intermenstrium'. 110, 1. ns = secondary ns, e.g. Ikuvins 'Iguvinus'. 110, 6, 128, 1.

ç, 's (precise sound uncertain)

The sibilant written c, \dot{s} , s,

= orig. k before e, i, etc., e.g. tacez, tases 'tacitus'. 144.

ř, rs (precise sound uncertain)

The sound written \check{r} , rs (sometimes r, r, s),

= intervocalic d, e.g. peři, persi 'pede'. 131, 132.

= (rarely) intervocalic l, e.g. kařetu, carsitu 'calato'. 106.

n

p = orig. p, e.g. pre 'prae'. 120.

= orig. ku, e.g. piř-e 'quidquid'. 150.

h

b, written b (sometimes p), b,

= orig. b, e.g. kebu 'cibo'. 123.

= orig. g_n^u , e.g. benust 'venerit'. 151.

mb = orig. mbh, e.g. ambr-'amb-'. 161.

br = orig. pr, e.g. subra 'supra'. 157, 1.

t

 $\mathbf{t} = \text{orig. } t, \text{ e.g. etu 'ito'}.$ 126.

For omission of final t, see 127, 2.

đ

d, written t, d,

= orig. d, e.g. tuves, duir 'duobus'. 130.

= orig. du, e.g. di-fue 'bifidum'. 102, 3.

dr = orig. tr, e.g. podruhpei 'utroque'. 157, 2.

nd = orig. nt, e.g. ander 'inter'. 156.

= orig. ndh, e.g. ahauendu 'avertito'. 161.

k

k, written **k**, c (rarely q),

= orig.k, e.g. kanetu 'canito', procanurent '*procinuerint'. 141.

= orig. k_{μ}^{u} ($g_{\mu}^{u}, g_{\mu}^{u}h$), e.g. fiktu 'figito'. 153, 154.

kl = orig. tl, e.g. pihaclu 'piaclo'. 129, 2.

g

g, written k, g,

= orig. g, e.g. ager 'ager'. 147, 1.

ng = orig. nk, e.g. iuengar 'iuvencae'. 156.

= orig. ngh, nguh, e.g. cringatro 'cinctum'. 161.

f

 $\mathbf{f} = \text{orig. } bh \text{ (L. } f, b), \text{ e.g. fratrum 'fratrum', alfu 'alba'. 124.}$

= orig. dh (L. f, b, d), e.g. façiu 'facere', rufru 'rubros'. 136.

= orig. $g_{s}^{u}h$ (L. f, v, gu), e.g. vufetes 'votis'. 152.

= ns, e.g. vitluf 'vitulos'. 110, 2, 3, 4, 5.

For omission of final f, see 110, 2, a.

fr = orig. sr, e.g. tefru-to 'ex rogo'. 118.

rf = rs (from r(e)s, rss), e.g. trahuorfi 'transverse'. 115, 2, 3.

h

h = orig. gh (L. h), e.g. homonus 'hominibus'. 149.

(h)t = orig. kt, e.g. rehte 'recte'. 142.

= ft from pt, e.g. screhto 'scriptum'. 121.

= ft from dht, e.g. vetu 'dividito'. 136, a.

As the h in ht was almost or wholly lost in pronunciation (75, 121, etc.), it does not properly belong under the *sound* h, but is placed here for convenience.

For the use of the letter h as a sign of hiatus, see 83.

For the omission of initial h, see 149, a.

INFLECTION

NOUNS 1

On the general system of declension, see 12.

FIRST DECLENSION

168. Examples of Declension.

	$\begin{array}{c} {\rm OSCAN} \\ {\it Singular} \end{array}$	UMBRIAN
Nom.	víú, touto, τωρτο	muta, mutu

Acc.	víass, eituas	vitlaf, uitla

Remarks on the Case-Forms

- 169. 1. Nom. Sg. The original ending $-\bar{a}$ is not shortened as in Latin, but is changed in quality. See 34.
- 2. Gen. Sg. The original ending $-\bar{a}s$, preserved in Latin only in the phrases pater famili $\bar{a}s$ etc., remains unchanged, except for the rhotacism in the later Umbrian. See 113.

¹ As the declension of adjectives is like that of nouns (see 187), some adjective forms are included in the paradigms.

In the Plural, the case which is called simply the Dative-Ablative is of course in reality the Dative-Ablative-Locative. \cdot

- 3. DAT. Sg. The original ending $-\bar{a}i$ was shortened to -ai, which remained in Oscan, but became $-\bar{e}$ in Umbrian. See 60, 62, 63.
- 4. Acc. Sg. The original ending $-\bar{a}m$ retains the long vowel. See 78, 1. For the omission of final m, see 109.
- 5. Voc. Sg. This is found only in the Umbrian proper names Tursa, Iouia, Prestota, Serfia. These forms certainly represent the old Voc. in -a, not the Nom. in $-\bar{a}$, since in all the occurrences, nearly fifty in number, the spelling is uniformly a, never o.
- 6. ABL. SG. The ending is $-\bar{a}d$, which arose in the Italic period after the analogy of $-\bar{o}d$. In Oscan the d is retained, as in early Latin sententiad etc., but is lost in Umbrian. See 133.
- 7. Loc. Sg. The ending is identical with that of the Dative. But in Umbrian, in this and other declensions, the postpositive en 'in' is frequently employed, either separately as in taffe e, or with contraction, yielding a form in -en, as arven, or oftener in -em, as Acersoniem (see 109, 1). And since a final nasal is oftener omitted than written, many, perhaps all, of the noun-forms in -e are to be regarded as compounded with -en, rather than as simple Locatives.
- a. Noteworthy are the phrases ocrem Fisiem beside ocre Fisie, and toteme Iouinem, toteme Iouine, beside tote Iouine. The extension of m to the adjective forms, as if it were a part of the real case-ending (cf. O. húrtín Kerríiín, 171, 7), was probably favored by the parallelism between Locatives with and without m and Accusatives with and without m, where the m of course appears in the adjective also. That is, the Loc. ocre(m) Fisie became ocre(m) Fisie(m) after Acc. ocre(m) Fisi(m). In toteme with e(n) added again to the already compounded totem the influence of Acc. forms like totam-e (cf. destram-e etc.) is also probable.
- 8. Nom. PL. The ending is the original $-\bar{a}s$, which is seen in Sanskrit and Gothic, but which in Latin and Greek has been supplanted by -ai modeled after the -oi of the Second Declension. The only change is the rhotacism in the later Umbrian (113).

- 9. Gen. Pl. The ending is $-\bar{a}s\bar{o}m$, seen in Homeric $-\bar{a}\omega\nu$ and belonging originally to the Pronouns (Skt. $t\bar{a}s\bar{a}m$). The Umbrian shows rhotacism like the Lat. $-\bar{a}rum$, while in Oscan only the intermediate stage z has been reached. See 112. The o of the last syllable was probably still long (78, 4, note).
- 10. Dat.-Abl. Pl. The ending is -ais like the Greek -ais, both modeled after the -ois of the Second Declension. The ai remains in Oscan, but changes to \bar{e} in Umbrian, as in Latin to $\bar{\imath}$. See 62, 63. Rhotacism occurs in later Umbrian, and also in Old Umbrian before the postpositive en, e.g. fesner-e in fano'. See 113 with a.
- 11. Acc. Pl. All forms of Italic (as well as of Greek) go back to an ending -ans, which, modeled after the -ons of the Second Declension, has replaced an older $-\bar{a}s$. The ns, which in Latin loses the n with lengthening of the preceding vowel, becomes O. -ss, -s, U. -f, the latter being very frequently omitted. See 110, 2.
- 12. MASCULINE ā-STEMS. There are several examples of the Nom. Sg. of Masculine proper names belonging to this declension. Some are borrowed from the Greek, but are without the final s; e.g. Santia, Arkiia $\Xi a \nu \theta i a s$, 'A $\rho \chi i a s$. But there are also some which seem to represent a genuine Italic formation in -as; e.g. Tanas, Markas, Maras, Mapas. For the oblique cases there is little material. An Acc. form is seen in Velliam. The Gen. Sg. Maraheis, if not simply a mistake for *Marahieis from Nom. Marahis (176, 4), stands for *Marā-eis, with the same adoption of the o-stem ending that is seen in Grk. -āo, and also in L. -āī, except that in the latter it is not restricted to Masculines.

¹ The term later Umbrian is used instead of the specific New Umbrian, so as to include V a-V b 7, which is Old Umbrian, but later than I-IV, and in the rhotacism of final s goes with the New Umbrian (see 113), e.g. plenasier urnasier (V a 2). Similarly in 2 and 8, above, though there happen to be no examples of the Gen. Sg. or Nom. Pl. of this declension in V a-V b 7. The -r forms of 171, 2, 8, 10, are all from this passage.

SECOND DECLENSION

170. Examples of Declension.

Remarks on the Case-Forms

171. 1. Nom. Sg. The o of the original -os (so in the earliest Latin inscriptions) is everywhere dropped (90, 91). For forms like O. húrz, U. taçez, tases, see 137, 2; — U. ager from *agros, 91, 2, 117; — O. famel, U. katel (Acc. katlu), tiçel (Acc. tiçlu), from -elos, 36, 2, 88, 4, 119, 2; — similarly O. Aukíl, Mutíl, from -ilos, Paakul from -ulos (cf. gentiles Muttillieis, Pakulliis, with doubling of l), 119, 2; — O. Mitl, Fíml, probably for *Mitel, *Fimel (like famel), 91, 2, a; — O. Upfals, Upils, from -llos (cf. Gen. Sg. Upfalleis), 119, 2; — O. facus, praefucus, from -uos, 91, 1. For jo-stems, see 173, 1.

2. Gen. Sg. The ending is -eis, borrowed from the Third Declension, where it represents the original ending of i-stems, as vice versa the Acc. Sg. of consonant-stems follows that of

- the o-stems. In Umbrian the -eis appears as -es, -er, -er (65, 113), rarely -e, -e (113, b). For O. $\Pi a \kappa_F \eta \nu$ etc., see 24.
- 3. Dat. Sg. The original ending $-\tilde{o}i$ has been shortened to -oi, which remains unchanged in Oscan and becomes a monophthong in Umbrian. The only corresponding form in Latin is Numasioi, the usual ending $-\tilde{o}$ coming from $-\tilde{o}i$ by a different process. See 60, 66, 67, 2. The Umbrian forms usually show e, e, but occasionally i, i or ei, e.g. Tefri, fratreci, Tefrei.
- a. U. Trebo, Fiso, for earlier Trebe, Fise, show a transfer to the Fourth Declension. In O. Pakiu and Verehasiú the omission of i is simply a mistake.
- 4. Acc. Sg. The original ending was -om, as in the earliest Latin inscriptions. In Oscan it is usually written -úm, -om, occasionally -um, -um (50). In Umbrian the vowel is always o in the Latin alphabet. For omission of the final m, see 109.
- 5. Voc. Sg. The original ending -e is preserved as in Latin. The only examples are from the Umbrian. With *Tefre* compare *puere* in Plautus.
- 6. ABL. SG. The d of the original $-\bar{o}d$ is retained in Oscan, as in early Latin $preiv\bar{a}t\bar{o}d$ etc., but dropped in Umbrian. See 133. The vowel is written $\hat{\mathbf{u}}$ or \mathbf{u} in the Oscan native alphabet, but always u in the Latin, and in Umbrian also nearly always u. See 53, 54.
- a. On the Iguvinian Tables, among over 100 occurrences, there is only one certain instance of an Ablative in -o (somo, VI a 10), apart from adverbs like eso (see 54, note, 190, 2, note). But as there seems to be something artificial in this uniformity of spelling (see l. c.), there is no objection on this score to taking maronato (no. 83) as Abl. Sg. of an o-stem (cf. Loc. Sg. maronatei, no. 84), though some assume that it is Loc. Sg. of a u-stem. See 302.
- 7. Loc. Sg. The original -ei from which comes the Lat. $-\bar{\iota}$ is retained in Osean, becoming an $-\bar{e}$ in Umbrian. See 64, 65. A fusion of this Locative with the postpositive -en is to be seen in O. húrtín Kerríiín, where the apparent ending -in (from $-\bar{e}n$, $-e\dot{\imath}-en$; 41, a, 82, 1) is extended to the adjective. Otherwise Osean has the simple Locative. In Umbrian the combination with -en is frequent, perhaps even universal. See 169, 7.

- 8. Nom. PL. In Latin, as in Greek, the pronominal ending -oi has completely displaced the old noun-ending -ōs, but in Oscan-Umbrian the leveling has been in the opposite direction, and both nouns and pronouns show -ōs. This appears in Oscan as -ús, -us (ius-c 'ii'), in Umbrian as -us, -u, -ur, -ur. See 53, 54, 113.
- 9. Gen. Pl. The ending is $-\bar{o}m$, which in Latin becomes -om, -um (deum etc.), so far as it is not replaced by the secondary $-\bar{o}rum$. It appears in Oscan as -úm, -um, once -om, $-ov\mu$, or $-o\mu$, in Umbrian as -u, -o(m). See 53, 54, 78, 4, 109, 1.
- 10. Dat.-Abl. Pl. The ending is -ois (Grk. -ois, -oioi; see 60, a), which becomes L. -īs. It appears in Oscan as -úis, -ois, in Umbrian as -es (-er-e), -e, -er (once -is), -ir (-is-co), -er, -eir, the usual forms being -es and -ir (over 100 examples of -ir including -isco, 7 of -eir, 6 of -er). See 66, 67, 2, 113 with a, b.
- 11. Acc. Pl. The ending is -ons (or $-\bar{o}ns$; see 74, note), whence L. $-\bar{o}s$ by loss of n and vowel-lengthening. For the change of -ns to O. -ss, U. -f, and the frequent omission of the latter, see 110, 2. For the long vowel in Umbrian, usually written u, rarely o, see 74, 54.
- a. Several Umbrian forms with o which were once taken as Masc. are more probably Neuter (see below, 13), and the existence of any Masc. forms with o is denied by some. But there is nothing incredible in the appearance of U. o for \bar{o} (see 54), and any other explanation than as Acc. Pl. Masc. is too forced in the case of uiro, ueiro 'viros', and pesondro 'figmenta'(?) in VI b 37 (Masc., as shown by pesondro sorsalem VI b 39; Pl., as shown by suruf in the parallel passage Ia 33). Probable examples also are ehiato 'emissos' VII b 2, agreeing with pifi 'quos' (other explanations less likely), and abrof, apruf 'apros' (regarded by some as for *abronf; cf. abrunu, abrons, 181, b).
- 12. Nom.-Acc. Sg. Neuter. This has exactly the same history as the Acc. Sg. Masc.
- 13. Nom.-Acc. Pl. Neuter. The ending is $-\bar{a}$, and in the Italic period this was extended to the Neuters of the Third and Fourth Declensions. This $-\bar{a}$, which thus became the ending of all Neuters, has the same history as that of the Nom. Sg. of the First Declension, being shortened in Latin, and appearing in Oscan as $-\hat{\mathbf{u}}$, -o, in Umbrian as $-\mathbf{a}$, $-\mathbf{u}$, -o. See 34.

But in Umbrian there are also some Nom. Pl. forms in -or and some Acc. Pl. forms in -u(f), -o(f), which seem to be Neuters (of various declensions) with r and f added after the analogy of the corresponding cases of Masc. o-stems. This extension probably started with the Acc., where it was favored by the existence of Masc. forms with and without f, and spread to the Nom. Examples are: Nom. uasor (stem $u\bar{a}s$ -, Abl. Pl. vasus); —tuderor (stem tuder-, Acc. Sg. tuder, Abl. Pl. tuderus), with the adjectives in agreement totcor and screihtor:—so probably arsmor with dersecor subator in agreement; — Acc. krematruf beside krematru, krematra:—kastruvuf beside kastruvu, castruo (u-stem, O. Gen. Sg. castrous); — uerof-e, veruf-e (O. veru Acc. Pl. Neut., rather than Acc. Sg. Masc.; cf. veruís).\(^1

14. GENDER. An example of a Fem. o-stem is O. Eídúís 'Idibus' (Eídúís Mamerttiaís), the Latin cognate being a Fem. u-stem. O. trííbúm is also Fem. (trííbúm ekak), but as only the Acc. Sg. and Abl. Sg. (tríbud) occur, it may be taken as a consonant-stem.

io-Stems

172. Examples of Declension.

	$egin{array}{c} ext{OSCAN} \ ext{Singular} \end{array}$	UMBRIAN
Nom.	Pakis, degetasis	Atiersir
GEN.	Dekkieis, kúmbennieis	Marties, Fisier

¹ I have adopted Thurneysen's view (K.Z. 32, 554 ff.; cf. also I.F. Anz. 9, 185), but am more thoroughly convinced of its truth for the Acc. forms cited than for the Nom. forms, for which the older explanation is by no means impossible (-or graphic variant of -ur; for vasor, tuderor, metaplasm as in L. $v\bar{a}s$, $v\bar{a}sa$, $v\bar{a}s\bar{a}rum$, and in terminus, terminās, terminā, which occur side by side in the Sententia Minuciorum). I do not follow Thurneysen in assuming that all Acc. forms in -o(f) must be Neuter. See above, 11, a.

Remarks on the Case-Forms

- 173. 1. Nom. and Acc. Sg. M. and Nom.-Acc. Sg. N. The forms come from -ios, -iom by samprasāraṇa (91, 1). For the quality of the resulting i (O. i, not i, U. -i(m), not e(m)), see 44, 45, a. U. Fisei, which occurs once, is one of the few examples of ei for short i (29). Like O. Mais from *Maijos (Dat. Sg. Maiiúi) are U. peřaem (Acc. Sg. M.), peřae, persae (Nom.-Acc. Sg. N.), from *pedaijom (Acc. Pl. F. peřaia, persaea), but with -e(m) for -i(m) after the preceding vowel; here perhaps U. difue bifidum' (Acc. Sg. N.) from *dui-fujom (or i-stem?).
- 2. Dat. Sg. In Umbrian, uncontracted and contracted forms are found side by side (82, 2), about evenly divided in Old Umbrian, but with a great preponderance of contracted forms in New Umbrian. Thus Fisie (1), Fisi (12), Fisei (1). Once Sansii beside Sansie, Sansi.
- 3. Dat.-Abl. Pl. Contracted forms (82, 2) are found only in New Umbrian, as Atiersir, Clauerni. Variations of the final are the same as in other o-stems (171, 10, 113 with a, b), e.g. Atileřies, Atileřier (V), Atileřie, Klavernie, etc. But Clauerni is the only case of omitted -r in a noun-form (see 113, b).
- 4. The other case-forms are like those of the ordinary o-stems, with the usual Umbrian variations in spelling, for which see 171. For the absence of contracted forms of the Gen., Voc., and Loc. Sg., see 82, 2, a. For O. meddixud from *meddikiōd, see 100, 3, c.

5. But there are some examples of transfer to the *i*-stem forms. Thus in the Abl. Sg., beside the forms given in the paradigms, we find O. serevkid, prupukid, medikid (probable reading), probably from *seruikio-, *prō-pak-io-, *meddik-io-, rather than from original *i*-stems. A similar transfer is probable in U. arvis, arves, Dat.-Abl. Pl. to arvia '*arvia, frumenta', since a contracted form, even if such were otherwise known in Old Umbrian (see 3), would not have -es. As an *i*-stem form the -es would not be without parallel (aves, punes), though its relative frequency (arves 11, arvis 2) is surprising.

Oscan Gentiles in -iis etc.

174. Many of the examples of io-stems are to be found among the proper names, for which Oscan furnishes copious material. Of forms like O. Pakis, Dekis, etc., some are gentiles and some praenomina. But there is also in Oscan, with some few examples in Umbrian, a distinct class of names in -iis (-iis, -ies, -ies), Gen. -iieis (-iieis). With the exception of a few forms on carelessly written inscriptions, these are all gentiles. The combination of praenomen in -is with gentile in -iis is frequent. Thus:

Pakis Kluvatiis
Pakim Kluvatiium
Dekis Rahiis
Dekkieis Rahiieis
Sepis Helevi(is)
Sepíeís ¹ Heleviieís

Vibis Smintiis
Vibis Urufiis
Stenis Kalaviis
Dekis Seppiis
Σπεδις Μαμερεκιες
-Τρεβις Sεστιες

Note also praen. Sepis: gent. Seppiis; — praen. $T \rho \epsilon \beta \iota s$: gent. Trebiis.

Further examples from the oblique cases of -iis are Gen. Sg. Aadiieis, Saidiieis, Virriieis (also U. Kluviier, Kastruçiie, the only Umbrian examples of the type): — Gen. Pl. Kluvatiium, Magiium, Viriium. The only Acc. Sg. form is Kluvatiium.

¹ The first i is simply a mistake. The word occurs on one of the *iorilae* inscriptions, which are notoriously inexact in the use of i.

Examples of forms in -iís are Aadiriís (also Aadíriis, probably a mistake), Atiniís, Kiípiís, S]puriís, Viínikiís; Gen. Sg. Spuriíeís, Kastríkiíeís; — Dat. Sg. Iúvkiíúí, Vestirikiíúí.

In the Greek alphabet we find $-i\epsilon s$, as $\Pi o \mu \pi \tau i\epsilon s = \mathbf{P\acute{u}ntiis}$, $Ma\mu\epsilon\rho\epsilon\kappa i\epsilon s$, etc.; also $A_{\digamma}\delta\epsilon i\epsilon s = \mathbf{Avdiis}$. The few examples in the Latin alphabet have $-i\epsilon s$, as Afaries, and such forms are common also in Paelignian, as Ponties, Loucies, etc. The spelling $-i\epsilon s$ in the native alphabet is very rare.

175. As is well known, the Latin gentiles are in origin patronymic adjectives formed with the io- suffix from individual names (that is, in terms of the fully developed system the praenomina), just as in certain Greek dialects patronymics in -ios are regularly used in place of the usual Genitives of the father's name. So $M\bar{a}rcius$ from $M\bar{a}rcus$, Tullius from Tullus, etc. To such forms correspond the Oscan gentiles in -is. But there are also in Latin praenomina in -ius, as $L\bar{u}cius$, Servius, etc., and in Oscan the praenomina in -is are very numerous. From such praenomina, it is clear, are formed the Oscan gentiles in -iis etc. That is, the gentile Trebiis stands in the same relation to the praenomen $T\rho e\beta \iota s$, as gent. Heírennis to praen. Heírens, or as Latin gent. $M\bar{a}rcius$ to praen. $M\bar{a}rcius$. The only uncertainty is as to the precise form of the suffix and the actual pronunciation.

There are three possibilities for the suffix, namely 1) $-i\underline{i}o$, 2) $-i\underline{i}o$, 3) both $-i\underline{i}o$ - and $-i\underline{i}o$ -, the latter in the case of forms in -iis. The probability is in favor of the first. Not only is $-i\underline{i}o$ - the suffix most natural to assume, whether as the inherited by-form of -io- thus turned to special account, or as actually formed from -io- in the Italic 1 or Oscan-Umbrian period, but it is also the one which best harmonizes with the usual spelling of the oblique cases. That is, in **Dekkieis** Rahiieis we have the same relation between $i = \underline{i}$ and $ii = i\underline{i}$ that is elsewhere observed (31).

¹ Any such differentiation between -io- and -iio-stems would necessarily be lost in Latin in most cases, since postconsonantal i becomes vocalic (e.g. medius from *medhio-). A possible trace is the difference between praen. $G\bar{a}ius$ (from * $G\bar{a}uios$ before the change of i to i) and gent. $G\bar{a}vius$, but even this is uncertain, as $G\bar{a}vius$ might be regarded simply as the older form retained in use in the gentile.

The Nominative in -iis from -iios is best explained by the assumption of samprasāraṇa in the last syllable. That is, as *Pak-ios became Pakis (173, 1), so *Kluvati-ios became Kluvatiis. Against this it may be urged that we should then expect also Acc. *Kluvatiim like Pakim, but it is possible that Kluvatiium, if this single occurrence is representative of the usual form, involves a restoration under the influence of húrtúm etc.

But in the Nom. forms, owing probably to dissimilation, the second vowel differed somewhat in quality from the first, and this is brought out in the spelling -ies, -ies. The same thing is indicated by the spelling -ifs, and wherever this was in vogue the if in place of it was extended to the oblique cases. The forms in -ifs, -ifefs, then, which are preferred in the Cippus Abellanus and many of the Pompeian inscriptions, but are not found elsewhere, represent simply a graphic variation of the usual type and not an independent formation.

- 176. 1. Although the interchange of -iis with -is reflects in general an earlier interchange of -iios with ios, yet in many instances the Nom. in -iis may be formed, at a comparatively late date, directly from the Nom. in -is, after the analogy of the usual relation between the two. Thus Mahii[s is formed from Mais, Mais, or rather from *Mahis with the spelling implied by the abbreviation Mh. For Mais comes through *Maijos (Dat. Sg. Maiiúi), from *Mag-ios (147, 3), and an inherited by-form *Mag-ios would yield O. *Magiis, which is actually represented by Gen. Pl. Magiium. So probably Iefis from praen. *Ieís (like Maís) from *Ieijos, *Iegios, the original by-form *Ieg-ijos surviving in L. Iegius.
- 2. Similar examples are Rahiis 'Raius' (Gen. Rahiieis) from praen. *Rahis, *Raiios, and Staiis 'Staius' from praen. *Stais, *Staiios, except that in these ii does not come from gi.
- 3. The spelling i instead of i (44, b) in *Stais, Stais, *Ieis, Ieis, as in Mais beside Mais, and in Vesulliais, is due to the influence of the many words containing the diphthongs ai, ei.
- 4. The relation of gent. Maraies, Gen. Sg. Maraiies to praen. Marahis, Gen. Sg. Marahieis is probably the same as that of Mahii[s to Mais, *Mahis (Mh.), except in the matter of spelling, the examples being from different localities and showing an extension of the h, which belongs to the Nom. Sg. as a mark of hiatus, to the oblique cases of the praenomen rather than to those of the gentile. The forms then go back to *Maraijos, related to Fal. Mareio and L. Marius. For the praen. Maras, Mapas (with Gen. Maraheis?), from the simpler stem $Mar\bar{a}$, see 169, 12.
- 5. In Dekis Hereiis, Gen. Dekkieis Heriieis (no. 40), either Hereiis is a mistake for *Heriis, or Heriieis for *Hereiieis (with suffix -eiio-, 253, 2). The former is more probable. Vírríiis (no. 20) beside Vírriis, Vírriieis, etc., is simply a careless spelling, rather than a different form with suffix -ēiio- (253, 3). For U. Teteies (II a 44), probably 'Tetteius', see 61, 3, 253, 2.

THIRD DECLENSION

177. The Latin Third Declension represents a partial fusion of consonant-stems and *i*-stems. In Oscan-Umbrian too there is a fusion in certain cases, but the distinction between the two classes is more faithfully preserved than in Latin. In the Acc. and Abl. Sg. there is no encroachment of the consonantal forms upon the *i*-stems, as in L. -em, -e, beside -im, -i; and in the Nom. Pl. the forms are as distinct as in the Gen. Pl. In the Dat.-Abl. Pl. the fusion exists in Oscan as in Latin, while in Umbrian consonant stems follow the u-stems. The relation of the two types may be seen from the following:

A. Consonant-Stems

B. I-Stems

Singular

Nom.	O. meddíss	O. aídil, U. fons

Nom.-Acc. Neuter

SG. U. tuplak, pir, nome U. uerfale, sehemeniar PL. (see 178, 12) U. triia, triiu-per, trio-per

Remarks on the Case-Forms

178. 1. Nom. Sg. Owing to the syncope of *i* in the -*is* of *i*-stems, the ending becomes identical with that of most consonant-stems. For the loss of s in aidil, see 119, 2. For peculiarities in the different classes of consonant-stems, see 179-182.

- 2. Gen. Sg. The -eis, representing the normal formation for i-stems as seen in various languages, has been extended to consonant-stems. In Latin, vice versa, the -is from -es, which belongs properly to the consonant-stems, has been extended to i-stems. For U. -es, -er, see 65.
- 3. Dat. Sg. The -ei belongs properly to the i-stems, of which it is an old Loc. The Latin -ī, early -ei, may be the same, or may stand for -ai, the old Dat. of consonant-stems, or may represent both. For U. -e, -e, see 65.
- 4. Acc. Sg. The -im of i-stems, only partially preserved in Latin, remains undisturbed. In Umbrian the spelling -im occurs in a few instances, but nearly always we find -e(m), -e(m), indicating the open quality of the i before final m (45, a). Thus spantim, ahtim-em, but uve(m), perakne(m), Tarinate, ocre(m), staflare(m), Tarsinatem, etc. This -em has of course no connection with the Latin -em, which is not from -im but represents the ending of consonant-stems.

In consonant-stems the original -em (from -m) has wholly disappeared in favor of -om, which is borrowed from the -o-stems.

5. ABL. SG. The ending of *i*-stems is -id, identical with L. -i, early -id. In Umbrian the spelling is usually -i, -i (-ei), rarely -e (cf. 48); e.g. puni (22 times), poni (12), pone (1), ukripe(r) (9), ocri-per (16), ocre-per (3).

In consonant-stems there is a difference between Oscan and Umbrian. In Oscan we find the ending of o-stems, as in the Acc.; e.g. tanginúd, tanginud. But in Umbrian it is -e as in Latin, e.g. kapiře, karne, curnase, frite (from *frēt-: L. frētu-; Abl. more likely than Loc., see 294), etc. This is probably a Loc. in origin, with -e for original -i.

- a. O. praesentid shows the form of an *i*-stem, just as in Latin the Present Participles show -ia, -ium, regularly, and often $-\bar{\imath}$ beside -e in the Abl. U. peři, persi, persei-co (aes persti-co), is also an example of the encroachment of the *i*-stem ending, as in early Latin $air\bar{\imath}d$ etc.
- 6. Loc. Sg. The proper endings are -ei (from -ei or -eii) for i-stems, and -i for consonant-stems. Owing to the absence

of Oscan examples and the ambiguity of the Umbrian -e, which may come from -ei (65) or -i (43), the history of the case is not altogether certain, but there is no objection to supposing that ocre contains the ending -ei (for ocrem see 169, 7), and that in ferine the -e comes from -i. This last is favored by scalsie, apparently for scalsi-e(n) (cf. scalse-to 'ex patera') with the original i retained before the enclitic.

Note. U. ferine is obviously a consonant-stem as if L. *ferione (see 181), but the phrase in which it occurs is so obscure that it is uncertain whether it is a Loc. 'in feretro' (L. $fer\bar{o}$) or Abl. 'cultro' (L. $feri\bar{o}$), though the former is more probable.

- 7. Nom. Pl. The ending of consonant-stems is -es (Grk. -es, Skt. -as, etc.), which in Latin is completely displaced by the -ēs of *i*-stems. With syncope of the *e* it appears in O. humuns etc. See 90, 1. For *i*-stems the ending is -eies (Skt. -ayas), whence -ēs which appears in Latin and in O. trís and in U. puntes, pacrer, foner. See 82, 1, 41, a. But O. aídilis (also fertalis, if Nom. Pl.), with i instead of i, points to a different formation, probably -īs, following the analogy of -ās, -ōs, in the First and Second Declensions.
- 8. Gen. Pl. The endings are $-\bar{o}m$ and $-(i)\dot{z}\bar{o}m$. For O. alittium, see 162, 1.
- 9. Dat.-Abl. Pl. The ending of *i*-stems is -*ifos*, from -*ibhos*, whence comes the Latin -*ibus*. This becomes by syncope -*ifs*, which is found in a single Oscan form of very early date, luisarifs. All other examples show assimilation of the *fs* (124, *a*). Thus O. Anafriss, sakriss, U. avis, puntis, sacris, etc., also aves, punes, with e for i (45), and once sevakne with omission of the s such as occurs elsewhere only in the case of original final s (113, b). The single occurrence of *ei* in aueis is not sufficient ground for supposing that the simplification of *fs* was accompanied by vowellengthening. See 29.

Consonant-stems show the *i*-stem form in Oscan as in Latin, but in Umbrian follow the *u*-stems. Thus O. *ligis*, but U. *fratrus*, *homonus*, karnus, etc.

10. Acc. Pl. The ending of *i*-stems is -*ins* (or -*īns*; see 74, note), whence L. -*īs* by loss of n and vowel-lengthening.

This would give O. -iss, like -ass, -uss, of the First and Second Declensions, but examples are wanting. Umbrian examples are trif, tref, tref, treif, avif, auif, aueif, auei, etc. For the change of final ns to f and the frequent omission of the latter, see 110, 2. For the long vowel indicated by the spelling ei, see 74.

For consonant-stems the ending is -ens (from -ns), whence L. -ēs by the same process as -īs from -ins. This would give O. -ess, U. -ef, for which, however, we find O. -s, U. -f. The Oscan form might be the result of syncope, but this could not be assumed for Umbrian, if the vowel in -ef was long (74). The change may be due to the analogy of the Nom. Pl. in -s (from -es), since in the other declensions the -f stands in the same relation to the stem as the -s of the Nom. Pl. But see 74, note.

The probable Oscan examples are usurs 'osores'(?) and malaks 'malevolos'(?). In Umbrian we have nerf (ner-, 180, 2), manf (man-, otherwise manu-), capif, kapi (also kapiř by mistake) from *kapid-f (139, 1), uapef-e from *uaped-f, uef from *ueif-f (136, a), frif from *frūg-f (147, 4). For U. abrons, see 181, b.

- 11. Nom.-Acc. Sg. Neuter. The -i of i-stems may remain as U. -e (43), or be dropped (92), just as in Latin we have sedīle, but animal etc. Thus U. sacre, uerfale, etc., but sehemeniar. Examples of consonant-stems are U. tuplak (192, 1), pir (180, d), nome (181), etc.
- 12. Nom.-Acc. Pl. Neuter. The ending $-\bar{a}$, belonging properly to o-stems, has been generalized, giving $-(i)i\bar{a}$ for i-stems and $-\bar{a}$ for consonant-stems, which then undergo the usual change of final \bar{a} . See 34, 171, 13. Examples from i-stems are U. triia, triiu-per, trio-per (192, 2), sakreu, perakneu (e for i, 45). From consonant-stems the only Umbrian examples are of the secondary type in -or, as tuderor from tuder- etc. See 171, 13. O. teremenniú beside teremniss 'terminibus' is either an example of the encroachment of the i-stem ending, or else comes from a stem termenio-, an extension of termen-. An original i-stem termeni- is less probable. For O. petora 'quattuor' (Festus), which may possibly contain the old ending of consonant-stems, -a, I.E. -o, see 191, 4.

Types of Consonant-Stems

2. Nouns of Relationship, like Latin pater, patris

	OSCAN	Singular	UMBRIAN
Nom.	patir, niir	<i>y</i>	According to the second
GEN.	Maatreis		Matrer
DAT.	Patereí		Iuvepatre
Acc.			
Voc.			Iupater
ABL.	•		And the second s
		Plural	
Nom.			frater, frateer, frater
GEN.	fratrúm, nerum		fratru(m), fratrom
DA.			fratrus, fratrus, nerus
Acc.			nerf

- a. The Nominative Singular preserves the original long vowel (Grk. $-\eta\rho$, $-\omega\rho$, Skt. $-\bar{a}$, etc.), which is shortened in Latin. See **78**, 2. In the other cases we have, as in Latin, $-t\bar{o}r$ in agent-nouns, but -tr- in nouns of relationship, except in the Vocative Singular. See **97**.
- O. Futref, Futref 'Genetrici', Gen. Futref is, apparently follows the declension of nouns of relationship, but the existing case-forms may belong equally well to an *i*-stem, and the word is perhaps a relic of the old Feminine formation of agent-nouns (Skt. -tr-ī), which in Latin nearly always appears in an extended form (gene-tr-ī-x etc.).
- b. For the Nom. Pl. in -r from -r(e)s, see 117; for U. frateer, see 76, 3; for O. -rs in the Acc. Pl., see 117, a.
- c. O. niir, nerum, U. nerf, nerus, etc., correspond to Grk. $\dot{a}\nu\dot{\eta}\rho$, Skt. nar-, Nom. Sg. $n\ddot{a}$ 'man', Gen. Pl. $nar\dot{a}m$ (Vedic).
- d. Neuter r-stems are: U. utur 'aquam' (Grk. " $\delta\omega\rho$), with Abl. Sg. une (*udne; see 135, a) from an n-stem (cf. L. femur, feminis); U. Nom.-Acc. pir, pir 'ignis' from *pūr (Grk. $\pi\hat{v}\rho$; see 59), with Abl. Sg. pure, pure-to, from a stem pur-. From pure-to arose, after the analogy of the Masculines, Acc. Sg. purom-e beside the regular pir.

¹ The history of the word would be simplified, could we accept the suggestion of De Saussure and Thurneysen (I.F. Anz. 9, 184) that it is not, as commonly supposed, a derivative of $f\bar{u}$ - with causative meaning 'cause to be, create', but the equivalent of Grk. $\theta v \gamma \acute{a} \tau \eta \rho$, Skt. $duhit\tilde{a}$, etc. But, without attempting to discuss here the complicated phonetics of this group of words, it is safe to say that we should expect in Oscan either *Fuktrei or *Fuhtrei. That the latter should appear three times without h would do for Umbrian, but not for Oscan (142).

181.

ACC. U. manf

Nasal Stems

MASCULINES AND FEMININES NEUTERS Singular Nom. O. fruktatiuf, úíttiuf, tríbarak-U. numem, nome, umen kiuf, U. tribřicu, karu O. tangineis, kú mparakineis, U. nomner, pelmner carneis U. nomne DAT. O. leginei, sverrunei, U. karne Acc. O. leginum, tanginom, medica-U. numem, nome tinom, U. abrunu ABL. O. tanginúd, tanginud, tangi-U. nomne, umne, tikamne nud, U. natine, tribrisine, karne Loc. U. ferine, ferine (?) Plural [O. teremenniú] Now. O. humuns GEN. O. ----D.-A. U. homonus, karnus

a. Most of the Masc. and Fem. forms belong to the type of L. legio, -ionis, but in the oblique cases show the suffix in the reduced grade -in- (95; the vowellength is shown by the Oscan spelling i, not i; see 47). In O. statif 'statua' (in form L. statiō) the reduced grade appears also in the Nom., but the i is strange (hardly -in- beside -īn-).

O. teremniss

- b. The type of L. sermō, -ōnis is represented by O. sverrunei, humuns (cf. early Latin hemonem), U. homonus, abrunu (as if L. *apronem). U. abrons, VII a 43, used as Acc. Pl., is probably the Nom. form written by mistake for *abronf.
- c. U. karu, Gen. Sg. O. carneis, etc., agree with L. carō, carnis in showing the reduced grade of the suffix in the oblique cases.
- d. The Oscan Nom. Sg. in -f represents -ns, with n introduced from the oblique cases, and s added after the analogy of other Nominatives. The Umbrian forms probably represent the same type with the final f omitted, rather than the formation in $-\bar{o}$ like the Latin. See 110, 5.

S-Stems

182. Examples of s-stems are: U. mers, mers 'ius', Dat.-Abl. Pl. mersus (132, a); — O. Dat.-Abl. Pl. aisusis 'sacrificiis'; — U. Dat.-Abl. Pl. vasus 'vasibus' (cf. L. $v\bar{a}s$), Nom. Pl. uasor (171, 13); — O. far, U. far 'far' (from *fars; see 117), Gen. Sg. farer (instead of *farser, under the influence of the Nom.); — U. Acc. Sg. tuder 'finem' (see 131, a), Dat.-Abl. Pl. tuderus, Nom. Pl. tuderor (171, 13), Acc. Pl. tudero; — U. ose 'opere'(?). U. pars in pars-est 'par est' seems to be like *fars, far, with rs preserved before the enclitic (117, b), but the relation to L. $p\bar{a}r$, paris is not wholly clear.

IRREGULAR NOUNS

- **183.** The nouns corresponding to L. *Iuppiter*, $b\bar{o}s$, and $s\bar{u}s$ show the following forms:
- 1. Gen. Sg. O. Iúveís; Dat. Sg. O. Diúveí, $\Delta \iota o \nu_{\mathcal{F}} \epsilon \iota$, Iuveí, U. Iuve, Iuue; Acc. Sg. U. Dei; Voc. Sg. U. Iupater, Di, Dei.
- 2. Acc. Sg. U. bum; Abl. Sg. U. bue; Gen. Pl. U. buo; Acc. Pl. U. buf, buf.
 - 3. Acc. Sg. U. sim, si; Acc. Pl. U. sif, sif, si.
- a. The relation between O. Iúveís and Diúveí is the same as between L. Iovis and early Diovis (see 134). For O. $\Delta \iota ov_{\mathcal{F}} \epsilon \iota$ see 24, a. U. Iuue for *Ioue is due to the influence of the Old Umbrian spelling. U. Iupater, like L. $I\bar{u}piter$ (Iuppiter), is from *Dieu-pater (Grk. $Z\epsilon\hat{v}$ $\pi\acute{a}\tau\epsilon\rho$). U. Di, Dei, are probably from the stem seen in L. $di\bar{e}s$, $Di\bar{e}s$ -piter, with contraction (82, 2).
- b. U. bum, buf, are from $b\bar{v}$ (cf. Grk. Dor. $\beta\hat{\omega}\nu$, $\beta\hat{\omega}s$), and this form of the stem has spread to the other cases, replacing bou- of L. bove etc.
 - c. For U. sim, sif, etc., see 59.

FOURTH DECLENSION

184. Examples of Declension.

	OSCAN	UMBRIAN
~ ~		Singular
Nom.		
GEN.	castrous	trifor
DAT.		trifo, Ahtu
Acc.	[manim]	${f trifu},\; trifo$
ABL.	[castrid]	[mani, mani, trefi, ařputrati]
Loc.		manuv-e

OSCAN

Plural

UMBRIAN

N.-A. NEUT.

GEN. D.-A. berva, castruo, kastruvuf

pequo(?)

berus

Remarks on the Case-Forms

185. 1. Gen. Sg. Oscan shows the original ending -ous (Skt. -\(\varphi s\), Goth. -aus, etc.), whence U. -or (72, 113), and L. -\(\varphi s\).

- 2. Dat. Sg. U. trifo (also Fiso, Trebo, with transfer from the o-stems; see 171, 3, a) may be combined with the Latin Dative in $-\bar{u}$ on the basis of a form in -ou. This is probably an old Locative, seen in U. manuv-e with the diphthong preserved before the enclitic, the -ou coming from -eu (70), this from -eu (60; cf. Skt. - $\bar{a}u$).
- 3. Acc. Sg. For U.-o from -um, see 57. O. manim cannot be reasonably explained from *manum and must be an i-stem form, due perhaps to the Ablatives in -id.
 - 4. ABL. SG. See 59 with note.
 - 5. Loc. Sg. For U. manuv-e, see above, 2.
- 6. Nom.-Acc. Pl. Neuter. The ending is $-u\bar{a}$ with $-\bar{a}$ from o-stems (171, 13), showing the usual change of final $-\bar{a}$ (34). For U. kastruvuf beside eastruo, see 171, 13.
- 7. DAT.-ABL. PL. The ending -us is from -ufs, -ufos, -ubhos (L. -ubus), and this has been extended to consonant-stems (178, 9).
- 8. Gender. As in Latin, *u*-stems are regularly Fem. (cf. U. trefiper Iiuvina) or Neuter. But U. *mani*, in contrast to L. *manus*, is Masc. (*mani nertru*).

FIFTH DECLENSION

- **186.** The Fifth Declension is represented by only a few seattering forms, namely:
- DAT. SG. O. Kerri 'Cereri'; U. ri 'rei'; U. auie 'augurio' (stem auie-more probable than auia- or auio-, on account of aviekate, auiecla).

ABL. SG. U. ri 're'.

Acc. Pl. U. iouie.

DAT.-ABL. PL. U. iouies.

- a. The ending of the Dat. Sg. is $-\bar{e}$, from $-\bar{e}i$, like L. $-\bar{o}$ from $-\bar{o}i$ in the Second Declension (60). Cf. L. $faci\bar{e}$ etc. quoted by grammarians.
- b. O. Kerrí represents a transfer from an original s-stem. Nom. Sg. * $Ker\bar{e}s$ (L. $Cer\bar{e}s$) became * $Kerr\bar{e}s$ under the influence of Gen. Sg. *Kerreis from *Ker(e)seis etc., and this was drawn into the analogy of forms of the Fifth Declension, just as was in part L. $pl\bar{e}b\bar{e}s$.

ADJECTIVES

DECLENSION

- 187. As in Latin, adjectives are declined according to the First and Second Declensions or according to the Third.
- 1. A large proportion of the existing forms follow the First and Second Declensions. Examples:
- O. túvtíks 'publicus', Nom. Sg. F. toutico, Acc. Sg. N. touticom; U. todcom (Acc. Sg. M.), Nom. Pl. N. totcor (171, 13), Dat.-Abl. Pl. todceir.
- O. múíníkú 'communis' (Nom. Sg. F.), Acc. Sg. F. muinikam, Abl. Sg. F. múíníkad, Loc. Sg. N. múíníkeí.
- U. Ikuvins 'Iguvinus', Gen. Sg. F. Iiuvinas, Dat. Sg. F. Ikuvine, Acc. Sg. F. *Iiouinam*, Abl. Sg. F. Ikuvina, Loc. Sg. F. *Iiouine*, *Iouinem* (169, 7, a), Nom. Pl. M. Ikuvinus.
- a. Just as the pronominal adjectives in Latin show pronominal forms in the Gen. Sg. and Dat. Sg., so in Oscan we find Dat. Sg. altrei 'alteri', not *altroi. See 195, c.

But in the Gen. Sg. there is no special pronominal ending, and Masc. and Fem. forms are kept distinct (195, b). Hence it is useless to assume pronominal declension for O. minstreis to account for its use with aeteis (minstreis aeteis 'minoris partis'), a word which is elsewhere Fem. (cf. a]íttíúm alttram 'portionum alteram'). We must rather assume local variation in the gender of the noun.

2. Adjectives of the Third Declension are mostly *i*-stems. Thus O.-U. *sakri*- beside *sakro*- (cf. early L. *sacrēs porcī* etc.; the Oscan and some of the Umbrian examples are used substantively, while the forms of *sakro*- are all adjectives), e.g. O. *sakr*im

(Acc. Sg. M.F.), U. sakre, sacre (Acc. Sg. N.), O. sakrid (Abl. Sg.), U. sakreu (Acc. Pl. N.), O. sakriss, U. sacris (Abl. Pl.). Cf. also the forms of U. pacri-, peracni-, seuacni-, peracri-, etc. Consonant stems are seen in U. tuplak (192, 1) and O. malaks 'malevolos' (?).

a. Observe that U. pacer (Nom. Sg.) is both Masc. and Fem., like many early Latin forms in -er.

COMPARISON

The Comparative

- 188. 1. Corresponding to the Latin Comparative in -ior (suffix -ies) are found only a few adverbial forms in -is from -ios (L. -ius); e.g. O. pústiris: L. posterius; O. fortis: L. fortius; O. mais 'magis': L. maius. See 91, 1.
- 2. The suffixes -ero- and -tero-, regular Comparative suffixes in Greek and Sanskrit, are used, as in Latin, in adjectives of time and place, but without the force of Comparatives in the grammatical sense; and, as O. pústiris shows, a regular Comparative could be formed from such adjectives, as in Latin. ples, including some adverbial forms, are: O. supruis 'superis', U. subra 'supra'; — O. pústreí 'in postero', U. postra 'posteras, posteriores'; — O. ehtrad 'extra', U. ap-ehtre 'ab extra'; — O. contrud 'contra'; — O. Entraí '*Interae'; — U. pretra 'priores' from *prai-tero- (for the form cf. L. praeter); — O. pruter (pan) 'prius(quam)' from * $pr\bar{o}$ -ter formed from $pr\bar{o}$ like Grk. $\pi\rho \acute{o}\tau \epsilon$ ρος from $\pi \rho \dot{o}$ (cf. also Skt. $pr\bar{a}t\acute{a}r$); — O. destrst 'dextra est', U. destram-e etc.; — O. hu[n]truis 'inferis', U. hondra 'infra', from *hom-tero- or *homi-tero- (cf. L. humus, humilis); — U. nertru 'sinistro': Grk. ἐνέρτερος, νέρτερος (cf. ἔνεροι); — O. nistrus 'propinquos' from *nedh-tero-1 (138, a; cf. nessimo-, 189).

¹ Others derive O. nistrus from *nedh-is-tero- (cf. 188, 3) and O.-U. nessimo-from *nedh-is-mmo- (cf. 189, 3); also O. messimass from *medh-is-mmo-. But it is better not to separate these from the other adjectives of similar use. It is true of course that -tero- and -tmmo- are not suffixes of primary derivation; but by the assumed *ned(h)-tero-, *ned(h)-tmmo-, we do not imply derivatives from the verbal root but from an adverbial form, similar to Grk. " σ - τ e ρ os, Skt. út-tara-, ut-tamá-, from *ud-tero-, *ud-tmmo-. With the assumed *medh-tmmo- compare Goth. miduma, Av. ma δ əma-, from *medh-mmo-.

- a. The suffix -tero- is also frequent, as in Latin and elsewhere, in pronominal adjectives. Thus O.-U. *potro- (O. pútúrús-píd etc.): L. uterque, Grk. $\pi b \tau \epsilon \rho o s$, etc. (200, 2); O. alttram 'alteram', alttreí, altrei, etc.: L. alter; U. etru 'altero', etre, etram-a, etc. from *e-tero-: O.Bulg. $jeter \check{u}$ 'some one' (contained also in L. $c\bar{e}tero$ from * $ce\underline{i}$ -etero-).
- 3. A suffix -is-tero-, a combination of -is-, the reduced form of the suffix -ies-, and the -tero- just mentioned, is seen in O. minstreis 'minoris' from *min-is-tero-, and 'U. mestru 'maior' from *maistero- (with regular monophthongization of the diphthong) for *mag-is-tero- (see 147, 3, a). Cf. L. minister, magister, used substantively.

The Superlative

- 189. 1. Nearly all the forms occurring are from adjectives of time and place, corresponding to L. sum-mus, prox-imus, ul-timus, etc. with the suffixes -mo-, -emo- (I.E. -mmo-), and -temo- (I.E. -tmmo-). Thus U. somo 'summum' (57, 125, 1); O. imad-en 'ab imo' (derivation uncertain; see 114, d); O. pustm[as 'postremae', posmom (139, 2); O. últiumam 'ultimam'; U. hondomu 'infimo' (cf. U. hondra, 188, 2; for d, see 156); O.-U. nessimo- 'proximus' (O. nessimas etc., 15, 8), cognate with O.Ir. nessam 'next', from *nedh-tmmo-1 (138, a); O. messimass 'medioximas'(?) from *medh-tmmo-1. For the vowel-changes in the suffix, see 86, 1.
- a. The same suffix -mo- appears in ordinals, as U. promom 'primum' etc. (191, 1, 9, 10); also in U. çimu, 'simo 'retro' from a stem *ki-mo-: L. ci-trā (cf. also U. çive 'citra', from a stem *ki-uo-). Under the influence of the adjectives in -mo- was formed *sēmo- (U. semu, sehemu 'medio'; see 305) from an adverb *sēmi (Skt. sāmi, adv., L. sēmi-, Grk. $\dot{\eta}\mu$ -, in cpds.).
- 2. O. ualaemom 'optimum' (also Valaimas) differs from the preceding in meaning and formation. It seems to contain -mo-added to a case-form (Dat.-Loc. Sg.), as perhaps also L. postrēmus. But neither this nor any other explanation is certain.
- 3. O. maimas 'maximae' from *maisemo- (114, b) for *magis-mmo- (147, 3, a) is parallel to O. minstreis, L. minister (188, 3).

ADVERBS

- 190. The most common adverbial endings represent stereotyped case-forms. Formations of more obscure origin are seen in many of the Pronominal Adverbs and Conjunctions (see under Pronouns, 195 ff. passim, 202), and in Prepositions (299 ff.), which are, in origin, Adverbs of Place.
- 1. Ablatives in $-\bar{e}d$ (L. $-\bar{e}$, early $-\bar{e}d$). Thus O. amprufid 'improbe'; U. prufe 'probe', rehte 'recte', nuvime 'nonum', nesimei 'proxime', preve 'singillatim', trahuorfi 'transverse', çive 'citra' (189, 1, a), etc.
- 2. Ablatives in $-\bar{o}d$ (L. $-\bar{o}$, early $-\bar{o}d$ in $por\bar{o}d$). Thus O. contrud 'contra' (cf. L. contr \bar{o} -versus), amiricatud '*immercato' (see 294, a), suluh 'omnino' (133, a); —U. heritu 'consulto' (294, a, 307), eso(c) 'ita', tertio (postertio) 'tertium', ulo 'illuc', çimu, simo 'retro' (189, 1, a), supru sese 'sursum', testru sese 'dextrorsum' (cf. dextr \bar{o} -vorsum etc.; for use of sese see 307), podruh-pei 'utroque', etc.

Note. Since the Instrumental was merged with the Ablative in prehistoric times, it is quite possible that this formation is of Instrumental origin. But that the old Instrumental form, without the d, is to be recognized in the Umbrian adverbs, is unlikely, in view of the d in Oscan and Latin. We assume, e.g., that U. supru comes from $*supr\bar{o}d$, like O. contrud, L. $por\bar{o}d$. See also 54, note.

- 3. Ablatives in $-\bar{a}d$ (L. $-\bar{a}$, early $-\bar{a}d$). Thus O. ehtrad 'extra', s]úllad 'ubique'; U. subra 'supra', hondra 'infra'.
- a. Here belongs also O. dat 'de', da(d)-, U. da- (300, 3), while L. $d\bar{e}$ is from an o-stem (cf. O. contrud: L. $contr\bar{u}$), either Ablative (above, 1) or Instrumental. The final t in O. dat arose before words beginning with a surd and was generalized (cf. the opposite process in L. ob), a contributory factor being the influence of ant, ampt, pert, post. A simple error, as in pocapit (127, 1, a), is unlikely, as the form occurs four times.
- 4. Ablatives in -īd (L. -ī, mostly replaced by -iter). A probable example is O. akrid 'acriter'(?).

¹ In favor of taking L, $d\tilde{c}$ as an Instrumental form may be urged its appearance as $d\tilde{c}$, not * $d\tilde{c}d$, in the S. C. de Bacchanalibus, in which the retention of final d, although archaistic, is absolutely consistent in the body of the inscription.

- 5. Neuter Accusatives in -om (L. -um, e.g. multum), especially frequent in adverbs of time. Thus O. siuom 'omnino', posmom 'postremum', U. promom 'primum'; similarly U. duti 'iterum', tertim 'tertium', from *dutiom, *tertiom (172, 173, 1). Here belong also the pronominal adverbs such as U. enom 'tum' and O. pon 'cum', U. ponne, from *pom-de. Cf. L. tum, quom, cum.
- 6. Neuter Accusatives are also the adverbs of the Comparatives like O. pústiris 'posterius' etc. (188, 1), and the conjunctions O. pod, U. puř-e, pirs-e, etc. (202, 1, 2), U. eřek, erse 'tum'. The Acc. Sg. F. in -am is seen only in pronominal forms, like O. pan 'quam', U. pane, from *pam-de. Cf. L. tam, quam.
- a. A probable example of the Acc. Pl. N. is U. postro, pustru 'retro' (VIIa 43, 44, Ib 34, 36), since this is hardly to be separated from postro, pustru, pustra, appearing elsewhere (VIb 5, VIIa 8, IIa 32, IIb 19) as an adjective used predicatively in the sense of 'retro'. See 306.

NUMERALS

CARDINALS AND ORDINALS

- 191. 1. Cardinal, U. unu 'unum'. Ordinal, U. prumum, promom 'primum' (adv.) from *pro-mo- (cf. Grk. πρό-μος 'foremost'). The stem *prīsmo-, whence L. prīmus, is seen in Pael. prismu 'prima'.
- 2. The cardinal is declined like the Plural of an o-stem, the old Dual inflection being given up even in the Nom., where it is retained in Latin. The following forms occur in Umbrian: Nom. M.F. dur, Dat.-Abl. tuves, tuver-e, duir, Acc. M.F. tuf (cf. also desen-duf 'duodecim'), Acc. N. tuva. For the contraction in dur, tuf, see 54, 82, 2.

For the ordinal the pronominal etram-a, etru, etc. (188, 2, a) is used in Umbrian, like alter in Latin. The adverb *du-tiom, U. duti'iterum' is formed after *ter-tiom, U. tertim (3).

a. The stem du- is also seen in U. du-pla, tu-plak (192, 1), and U. du-pursus 'bipedibus'; and *dui- (L. bi-, Skt. dvi-; see 102, 3) in U. di-fue 'bifidum': Grk. $\delta\iota$ - $\phi\upsilon$ η s.

3. The cardinal has the regular declension of an *i*-stem, as in Latin. Thus in Oscan Nom. M.F. trís (41, a, 82, 1), in Umbrian Dat.-Abl. tris, Acc. M.F. trif etc. (178, 10), Acc. N. triia (also trio-per, 192, 2).

The ordinal appears in U. tertiam-a, tertiu, etc., and in the adverb tertim from *tertiom.

4. O. petora (Festus) is a Nom.-Acc. Pl. N. from a stem *quetuor. Cf. L. quattuor, with a of doubtful explanation, and Dor. $\tau \acute{e}\tau o\rho a$. If exactly quoted, it retains the old ending of consonant-stems, -a (I.E. -\(\theta\)), escaping the usual substitution of -\(\alpha\) (171, 13) from the fact that it was no longer felt as an inflected form (cf. L. quattuor). But it is also possible that it stands for *petoro with the usual -\alpha\), being quoted with Latinized ending. For O. petiro-pert, see 192, 2.

The ordinal is probably to be recognized in O. trutum, though the translation 'quartum' is disputed. As such it can readily be explained as from *ktru-to- with a reduced form of I.E. *quetru- (cf. L. quadru-, Av. ča θ ru-), just as Skt. turíya- 'fourth' is from *kturīya- (cf. Av. \bar{a} - $\chi t \bar{u} irya$ - beside $t \bar{u} irya$ -).

- a. U. petur-pursus 'quadrupedibus' shows another form of the stem, namely $*q_{\underline{\nu}}$ etur- (Skt. catur- in cpds.; cf. also $*q_{\underline{\nu}}$ etru- above).
- 5. The cardinal *pompe and the ordinal *ponto- are to be assumed from O. púmperiais 'quincuriis', U. pumpeřias, O. Púntiis, $\Pi o \mu \pi \tau \iota \epsilon s$ 'Quintius', O. pomtis 'quinquiens', and U. puntes 'pentads.' See 37, 146, 150, 153.
- 6. The ordinal *sesto- (L. sextus; cf. O.-U. destro-: L. dextro-) is to be assumed from U. sestentasiaru 'sextantariarum'.
 - 8. The ordinal stem is seen in O. Úntavis 'Octavius'.
- 9. An ordinal *nouemo-, like Skt. navamá- but in contrast to L. nōno- from *noueno-, is seen in U. nuvime 'nonum'.
 - 10. The cardinal is seen in U. desen-duf 'duodecim' (144).
- An ordinal corresponding to L. decimus is implied by O. Dekmanniúis '*Decumaniis'; also a *dekento- (Grk. δέκατος) by O. deketasiúi '*decentarius' according to one interpretation.

- a. U. tekvias 'decuriales' and O. Dekkviarím 'Decurialem' are formed with the suffix -io- from a stem *deku- (cf. L. decussis and late decu-plex), which, like centu- in L. centu-plex etc., is due to the analogy of * q^{v} etru (4). Cf. also U. dequrier, tekuries 'decuriis'.
 - 12. U. desenduf 'duodecim'. See 10.

DISTRIBUTIVES AND NUMERAL ADVERBS

- 192. 1. Distributives are U. prever 'singulis' (17, 10), tupler 'binis', dupla 'binas', tripler 'trinis'. The last two agree with L. duplus, triplus, in form but not in meaning. The only multiplicative is U. tuplak, Acc. Sg. N. used substantively ('furcam'?): L. du-plex, Grk. $\delta\ell$ - $\pi\lambda a\xi$.
- 2. Numeral Adverbs are U. triiu-per, trio-per 'ter', O. petiro-pert, petiru-pert 'quater'; O. pomtis 'quinquiens', U. nuvis 'noviens'. With -pert, -per (127, 3) compare L. sem-per etc. It is added to the Neuter Plural in U. triiu-per from *triā-pert, and after the analogy of this form arose *petriā-pert, whence O. petiro-pert (81, 100, 3, c). O. pomtis and U. nuvis cannot be connected with the Latin formation in -iens and are probably formed after the analogy of *duis (L. bis) and *tris (L. ter). For the m of O. pomtis, see 146.

PRONOUNS

PERSONAL PRONOUNS

193. The few occurring forms of the Personal Pronouns are: FIRST PERSON. U. mehe 'mihi'.

SECOND PERSON. O. tiium, tiú 'tu'; — O. tfei, U. tefe, tefe 'tibi'; — U. tiu, tiom, tio, teio, 'te'.

REFLEXIVE. O. sífeí 'sibi'; — U. seso 'sibi'; — O. siom 'se'.

- a. The Dative forms mehe, tefe, sifei, correspond to L. mihi etc. and represent *meghei, *tebhei, *sebhei. The enclitic use of the forms explains the weakening of the vowel in the first syllable in Latin and in O. tfei, sifei. See 86, 3.
- b. U. seso is perhaps se-so, se being from *s(u) oi (Grk. oi) and so a particle of unknown connection.

c. The Acc. forms U. tiom, O. siom, perhaps contain $t\bar{e}$ and $s\bar{e}$ with the addition of the particle -om seen in O. píd-um etc. (201, 5)... O. tiium would then be the same form, used as a Nom., just as, vice versa, in some Doric dialects $\tau \dot{\nu}$ is used as an Acc. Another possibility is that the Nom.-Acc. Sg. Neuter of the Possessive * $me(\dot{i})o$ -(L. meus) came to be used substantively for both 'ego' and 'me' and that after *meom arose Nom.-Acc. *teom, *seom. For i from e, see 38, 1, 39, 1.

POSSESSIVE PRONOUNS

194. The following forms are found:

SECOND PERSON. O. tuvai 'tuae'; — U. touer, tuer 'tui'; — tuua, tua 'tua'; — U. uestra 'vestra'.

Third Person. O. suveis 'sui'; — suvam 'suam'; — súvad 'sua'; — U. sueso 'suo' (Loc.).

a. The contrast in spelling between U. touer and tuer and between O. súvad and suveís (suvam and tuvai, no. 19, are ambiguous) seems to point to the existence of both the stems which are found in other languages, namely *teuo-, *seuo- (early Latin tovos, sovos), and *t(u)uo-, *s(u)uo- (Skt. tvá-, svá-). Cf. Grk. $\tau\epsilon bs$, ϵbs , beside σbs , δs .

b. U. sueso is probably a Locative *suei + so (cf. seso, 193, b).

DEMONSTRATIVE PRONOUNS

195. The pronoun corresponding in use to the Latin is agrees with the latter in the Nominative and Accusative forms (stems i- and $e(\underline{i})o$ -, $e(\underline{i})\bar{a}$ -; for the i in O. iúk, ioc, etc., see 38, 1), but the other cases show a stem *eiso-, O. eizo-, U. ero-. This perhaps has its origin in a Gen. Pl. *eisōm (O. eisun-k), properly *ei-sōm, with the regular pronominal ending -sōm (Skt. -sām; also Italic in $-\bar{a}$ -sōm), but felt as *eis-ōm on account of the usual noun-ending. The enclitic -k is attached to many of the forms, as in L. hic. See 201, 1.

For the sake of a more complete representation of the cases, the forms corresponding in use to L. $\bar{\imath}dem$ are included in the paradigm, but inclosed in brackets. On the enclitics used, see 201, 5, 6.

¹ The author is unable to accept the view of v. Planta and of Solmsen, Studien z. lat. Sprachgeschichte, 151 ff., that oy becomes uy in unaccented syllables. See Verb-System, 175.

	C	SCAN	Singula	r	UMBRIAN	
	М.	N.	F.	м.	N.	F.
Nom.	izic [ísídum, (esídum, 44, c	ídík)]	iiuk, iúk, ioc	ere(k). ere(c) [er-ont, eri-hont]	eřek, erse	
GEN.	eíseís, eize	eis	-	erer, ire erer-ek	r,	erar [erar-unt]
Dat.						
Acc.	ionc	$idik,\ idic$	fak $(108,2,a)$		eřek, erse	eam
ABL.	eísúd, eizu	ıc	eisak, eizac	eru-ku, eru-com [eru-hu]		erak [era-hunt, era-font]
Loc.	eíseí, eizei	c	e]ísaí			
Nom.	iusc [iussu, iusu] ¹		Plural 	$[\mathit{eur} ext{-}\mathit{ont}]$		
GEN.	eisunk		eizazunc	eru, ero(m)	
Dat.	eizois		$eiza(i)sc^2$	[erer-unt	3 , $erir$ -ont]	· ——
Acc.		ioc			eu, eo	eaf, eaf

- a. U. erec and erse are certainly equivalent to O. izic and idic, but, although e for i is common enough in Umbrian (45), the consistency of the spelling e is probably due to the influence of the other case-forms, erer etc.
- b. The Gen. Sg. U. erar, together with O. ulas 'illius' (197, 3), shows that, in contrast to Latin, the Feminine was kept distinct from the Masculine.
- c. The Dat. Sg. M. and N. of pronominal o-stems had the Locative ending -ei, as is shown by the pronominal adjective O. altrei 'alteri', thus agreeing with the Latin (illī etc.). Cf. also U. esmei 'huic' (197; 1). The Feminine form was doubtless kept distinct, as in the Genitive. Cf. Loc. Sg. O. e]ísaí.
- d. U. iepi and iepru have been thought to contain case-forms of erec, but this is very uncertain.
- e. U. eřek, erse, Acc. Sg. N., is sometimes used as an adverb 'tum', e.g. VIa 6, where it is correlative with pirsi 'cum'.
- f. The stem i- is seen also in the following adverbs: U. if e 'ibi' with the same ending as pufe (202, 5), to which belongs perhaps ef VIa 4, with loss of

¹ See **53**, a.

² Aes eizasc.

the final vowel (cf. also *ifont* 'ibidem', **201**, 6); — O. ip 'ibi' (Pael. ip) probably from *i-pe with the same enclitic as neip, L. neque; — U. itek 'item' from *i-te-k or *i-t'-ik (cf. L. ita, item, Skt. iti, etc., which however differ in the final vowel).

196. The pronoun corresponding in use to the Latin hic is in Oscan formed in part from a stem eko-, in part from ekso-, in Umbrian wholly from the latter in the form es(s)o- (145, 3). In most of the Oscan forms the enclitic -k (201, 1) is used.

		Singular	
	м.	N.	\mathbf{F}_{ullet}
Nom.			O. ek., U. eso
GEN.			
DAT.			-
Acc.		O. ekík	O. ekak (108, 2, a)
ABL.		O. eksuk,	O. exac, U. esa
		U. essu, esu, esu-ku	
Loc.		O. exeic	
		Plural	
Nom.			O. ekas, ekask
GEN.		U. esom-e, esum-ek(?)	
DA.		U. esis-co,	O. exaisc-en
		$esir,\ isir$	
Acc.			O. ekass

- a. The Oscan Acc. Sg. N. ekik (Pael. ecic) is from *ekid-k formed after the analogy of id-ik. Cf. also U. este (197, 4).
- b. The stem eko- or ekso- is seen also in O. ekss, ex 'ita', but the precise formation is uncertain (*ek(e)s or *eks(e)s with the same -s as in puz, or *eks(e)?). For O. ekkum 'item', see 201, 5.
- c. The Umbrian stem es(s)o- is also seen in eso, esoc, iso, issoc 'ita' (adv. in $-\bar{o}$; see 190, 2), isec, isek 'item' (cf. itek, 195, f), and isunt 'item' (201, 6). For the i in these forms and in Dat.-Abl. isir, see 39, 4.
 - 197. There are some scattering forms from other stems.
- 1. U. esmei 'huic', esmik 'ei'; Loc. Sg. esme. These, together with U. pusme 'cui', are the sole relics in Italic of a type of pronominal case-forms found in various languages, most clearly in

Sanskrit, e.g. Dat. Sg. $ásm\bar{a}i$, $tásm\bar{a}i$, $kásm\bar{a}i$, Loc. Sg. ásmin, etc. The stem of esmei is e, the same as in Skt. $á-sm\bar{a}i$, the two forms being identical except that in esmei the Locative ending is used for the Dative, as usual (195, c).

- 2. U. uru, uru 'illo'; Abl. Sg. F. ura-ku; Dat.-Abl. Pl. ures; here also probably, as Gen. Sg. M., orer VIa 26, etc., though there are various interpretations of the phrase. For u in uru see 51. The stem may be *oro-, *oso-, or even *oiso-, cognate forms being unknown.
- 3. U. ulu, ulo 'illo, illuc', adv.; here also probably, as Gen. Sg. F., O. ulas (no. 19). Stem ōlo- as in L. ōlim, to which early L. olle is also related.
- 4. U. estu 'istum'; Acc. Sg. N. este, este; Acc. Pl. N. esto, estu. Stem esto-, whence L. iste with i under the influence of is. The neuter este is from *estid formed after the analogy of id, pid.
- 5. O. essuf, esuf 'ipse', U. esuf. The meaning 'ipse' is reasonably certain (cf. T. B. 19, 21), so that it is difficult not to assume connection with L. ipse, though inconsistent with the usual derivation of the latter from *is-pse. The stem would then be *epso- (for ss see 122, 2), and the -uf perhaps represent a transfer to the inflection of n-stems (O. úíttiuf etc., 181) as if we had in Latin *ipsō formed after agent-nouns in $-\bar{o}$, $-\bar{o}nis$. But the whole matter is problematical.
- 6. U. surur 'item' (whence sururont, suront, 201, 6) is of uncertain origin, but perhaps represents a reduplicated formation $*s\bar{o}-s\bar{o}-s$ or $*s\bar{o}-s\bar{o}-r$, $s\bar{o}$ being from the stem so-seen in L. $s\bar{i}c$, earlier sei-ce.

INTERROGATIVE, RELATIVE, AND INDEFINITE PRONOUNS

198. The use of the I.E. Interrogative-Indefinite Pronoun, stems $*q\underline{u}o$ - ($*q\underline{u}\overline{a}$ -), $*q\underline{u}i$ -, and, in adverbs, $*q\underline{u}u$ -, for the Relative is characteristic of Italic. The Latin distinction between $qu\overline{\iota}$, quod, and quis, quid, is also common to the dialects. The o-stem forms are used for the ordinary Relative (with definite antecedent), the i-stem forms for the Interrogative (only one example),

Indefinite, and Indefinite Relative. For the distinction between the Definite and Indefinite Relative, cf. O. thesavrúm púd eseí tereí ist . . . iním píd e[iseí] thesavreí púkkapíd ee[stít 'thesaurum qui in eo territorio est . . . et quidquid in eo thesauro quandoque exstat'. In Latin, too, quis was originally used for the Indefinite Relative (Neue, Formenlehre II's, p. 430), and Cato's quesquomque is evidence for *quisquomque (U. pisi-pumpe). Cf. also quisquis, and quisque in its Relative use.

How far there was any corresponding differentiation in the other case-forms cannot be determined from the limited number of occurrences.

199. Examples of Declension. Some of the compound forms (200, 1) and conjunctions (202) are included.

	STE	м ро-, ра- (Ц	. quo-, quā-)	STEM pi-	(L. qui-)
			Singular		
	м.	N.	\mathbf{F}_{ullet}	M. F.	N.
Nom.	O. pui, U. poi, poe, poei	O. púd	O. paí, pai, pae, paei	O. pís, pis, pis, U. pis-i, pis-i, pis-est, pis-her, sve-pis, so-pir	U. piř-e
GEN.	O. púiieh			O. pieis-um	
Dat.	U. pusme			O. piei	
Acc.		O. pod, (U. sue-po, puř-e, pors-e, etc., conj.)		O. phim ¹	O. píd, pid, píd-um, pid-um, (U. piř-e, pirs-e, etc., conj.)
ABL.			O. poizad, U. pora		

¹ Misspelling for pim, probably due to the influence of Latin orthography with its not infrequent confusion of p and ph, t and th, etc. Cf. also O. Aphinis, Perkhen. (beside Perkens).

		Plural		
М.	N.	F.	M. F.	N.
Nom. O. pús,	O. paí	O. pas, pas	-	
U. pur-e,				
pur- i			~~	
Acc. —	O. pai	$\mathrm{U.}\;paf$ -e	$\mathrm{U.}\ \mathit{pif-i}$	

- a. O. pui is from *quoi, whence L. $qu\bar{\imath}$, while U. poi is to be explained as the same form $(*p\bar{o}$ from *poi) with the addition of the particle $-\bar{\imath}$, seen in pur-i, paf-e, etc. O. paei beside pai is probably only a careless spelling for pae, since the particle $-\bar{\imath}$ is not found in the other Oscan forms.
- b. O. púileh, for *púileís (see 64, b, 113, c), is in origin the Gen. Sg. of the Possessive Adjective, like L. $nostr\bar{\imath}$, $vestr\bar{\imath}$, etc.\(^1\) The adjective is seen in O. púilu 'cuia': L. quoius, Grk. $\pio\hat{\imath}os$, all from a stem * $q^{u}oi-\hat{\imath}o$ (253, note).
- c. U. pusme is a form like esmei and so almost identical with Skt. $k\acute{a}sm\bar{a}i$. See 197, 1.
- d. O. poizad, U. pora, are from a stem *poiso-, standing in the same relation to po- as *eiso- to i-, e(i)o-, and probably of similar origin. See 195. Nothing is gained by assuming a compound * $p\bar{o}$ -eiso-.
- e. O. pieis, piei, instead of which we should expect *peis, *pei, are due to the influence of pis, which as a monosyllable retained the i in contrast to other i-stem Nominatives. That is, we have *slag-s, Gen. *slag-eis, but pi-s and so Gen. pi-eis. The analogy of io-stems (Nom. -is, Gen. -ieis) may also have been a factor.
- f. A form porsi, porse, porsei, which occurs in place of certain case-forms, e.g. Nom. Sg. M. (VI a 6, 9, etc.), Nom. Pl. N. (VI a 15, 19), Acc. Pl. N. (VI b 40), although usually explained in various other ways, is best taken as the conjunction (cf. puř-e II a 26), used loosely as a sort of indeclinable Relative.
- **200.** 1. Indefinite and Indefinite Relative Pronouns compounded of *pis* are:
- U. pis-i (piř-e etc.). Indefinite and Indefinite Relative. But pif-i VII b 2 has a definite antecedent.
 - O. *pis-um (pid-um, pid-um, pieis-um). Indefinite.
- O. pis-pis (pit-pit Festus). Indefinite Relative. Cf. L. quis-quis.
- U. pis-her. Indefinite. Formed like L. quī-libet, her being 3d Sg. Pres. Indic. from her-'velle' (216).

¹ The suggestion of Sommer, Lat. Laut- und Formenlehre, 472, that púileh is Nom. Sg. M. of the adjective, would be attractive if it could be shown that the order of the inscription (no. 39) might be púileh súm | perkium, in which case we could translate 'cuius sum? Perkiorum' (cf. no. 55). Yet on the analogy of Mais beside Maiiúí (173, 1) one would expect Nom. Sg. M. *puis.

- 2. The pronoun corresponding to L. uterque is seen in O. Nom. Pl. pútúrús-píd, Loc. Sg. pútereí-píd, etc., U. Gen. Sg. putres-pe, adv. podruh-pei; also in U. sei-podruhpei 'seorsum utroque', with which compare L. sēd-utraque (Plautus, Stich. 106). All these forms come through *potro- (81, 88, 4) from *quotero- (Grk. πότερος, Skt. katará-), that is, *quo- with the suffix -tero- (188, 2). L. uterque owes its u to the influence of adverbial forms containing the stem *quu- (see 3).
- a. O. alttrei pútereipid akenei, if akenei is 'year' (159, a), must mean 'in every other year', where the Romans said 'in anno altero quoque' (Col. R.R. 5, 8).
- 3. Besides the stems *quo- and *qui-, a stem *quu-, frequent in the adverbial forms of various languages (e.g. Skt. ku-tas 'whence?', ku-tra 'where?', etc., Cretan $\delta \pi u$ etc.), is to be recognized in O. puf 'ubi', U. pufe; O. puz 'ut', U. puze, puse, etc. See 154 with a, 202, 5, 6.

PRONOMINAL ENCLITICS

- **201.** The enclitic particles used with pronominal forms are as follows:
- 1. -k, like L. -ce, -c, in hic, hunc, etc. In contrast to Latin, this is very common in forms of the pronoun corresponding to L. is (see 195); it occurs also in most of the Oscan forms of eko-, ekso- (see 196); further in U. esmik (197, 1), and various adverbs, as esoc, isec, itek, inum-k, etc. In general it is more frequent in Oscan than in Umbrian. It has become an integral part of some of the forms, just as in L. hic, hunc, e.g. O. iik, ioc (but U. eu, eo), while in others its use is optional, e.g. O. eisid and eizuc. In Umbrian, however, the absence of -k, -c, is not always proof that the formation without the enclitic is intended. It is altogether unlikely that ere, ere, is to be separated from erek, erec (O. izic), or erse from eřek (O. idic), or eso from esoc. Probably the final k, like other final consonants in Umbrian, was weakly sounded and so, frequently, omitted in the writing.
- 2. -ik, a combination of the preceding. This is seen in the forms just mentioned, O. iz-ic, id-ik, id-ic, U. er-ec, etc., also in esum-ek, esom-e, and in the adverbs enum-ek etc. The particle to which the k is added probably stands for id (like pid). For the change of *id-k to -ik, cf. Abl. Sg. eisak, eizac.
- 3. -ī, as in Grk. οὐτοσ-t. This is found in Umbrian in nearly all forms of the Relative-Indefinite Pronoun (199), including the adverbs puz-e, pus-ei, pu-e, etc.

- 4. -pid, used like the Latin generalizing -que in quisque etc. This is seen in the forms corresponding to L. uterque (200, 2), and in the adverbs O. púkkapíd, poca-pit 'quandoque', U. panu-pei 'quandoque', U. pum-pe in pisi pumpe 'quicumque'. It corresponds in form to L. quid and stands in the same relation to L. -que as Skt. -cid to -ca, both of these being used as generalizing particles though in different combinations. The three occurrences of U. -pei (panupei, podruhpei, seipodruhpei) make it probable that in Umbrian, in the adverbs at least, the particle -ī (above, 3) was added to -pi from -pid.
- 5. -om (or -dom?). This is found in Oscan, 1) as a particle of Identity, in isidum 'idem' etc. (195), where Umbrian has -hont (6), and in the adverb ekkum 'item';—2) as an Indefinite particle, in pid-um 'quidquam' etc. (200, 1), where Umbrian has -\(\tau(3)\), and in the conjunction pun-um 'quandoque'. It is probably the same element in O. per-um 'sine', and perhaps in O. tiium, U. tiom, etc. (193, c). For O. -um from -om, see 50.

There is a difference of opinion as to whether the particle is properly -om or -dom, as it is also a matter of dispute whether in L. idem etc. the -dem is original or due to a wrong division of id-em, Abl. eod-em, etc. On general grounds there is no objection either to -dem, -dom, from the same stem do- that is seen in various enclitics, e.g. -de in L. quamde, U. pane, or to -em, -om, to be compared with Skt. -am in id-am. The question is which suits better the actual In the Indefinite forms there is no evidence for -dom, in fact it is very unlikely that pid-um comes from *pid-dom. In isidum we may divide is-id-um (as we have assumed *is-id-k for izic) as well as is-i-dum. The chief support for -dom is found in ekkum and fussu, but the changes involved (kd to kk and sd to ss) are otherwise unknown (139, α), and it is quite possible that ekkum is for *ekk'-om with ekk' for *ekke (L. ecce), and that of the two spellings fussu and iusu the latter is the more correct, the former being a slip due to the existence of an Acc. Pl. form *fúss-u or else to an uncertainty as to the syllabic division (fus-u with etymological, fu-su with phonetic syllabification). At any rate the derivation from *ek-dom and *e\bar{o}s-dom is not so obvious as to constitute proof of the particle -dom in Oscan.

- 6. -(h)ont. This is found in Umbrian only, namely in eront, erihont 'idem' etc. (195), and in the adverbs ifont 'ibidem', isunt 'item', sururont 'item' (whence also suront by haplology). It probably contains *hom, from the same stem as L. hic, with the -t of pos-t, per-t, etc. We find -hont after vowels, but -ont after consonants (149, a). For sururo and eruhu, occurring once each, see 128, 2, a. The Abl. Sg. F. erafont which occurs twice beside erahunt owes its -font to a wrong division of other forms, e.g. if-ont (ife 'ibi') taken as i-font.
- 7. Here may be mentioned the pronominal prefix e in O. e-tanto 'tanta': L. tantus. Cf. L. e-quidem.
 - 8. For enclitics found only in adverbs, see the following.

RELATIVE ADVERBS AND CONJUNCTIONS

- 202. Many of the pronominal adverbs have been cited among the forms of the various pronominal stems (195-200), but it is desirable to treat separately the forms of the Relative (and Indefinite) Adverbs, most of which serve as Conjunctions; and for the sake of convenience the Conjunctions not formed from the stems of Relative Pronouns are included.
- 1. O. pod in suae pod 'sive', svai puh (133, a), with which is identical U. suepo, svepu; also in O. pod min[s 'quo minus'. This is Acc. Sg. N. like L. quod, not Abl. Sg. as in L. quō minus. The same form with the enclitic $-\bar{\imath}$ is seen in U. puř-e 'quod, cum, quomodo' (II a 26, III 5, V a 7), with which is identical pors-i etc. used in place of certain case-forms (199, f). Cf. also O. adpúd, U. arnipo (below, 9, 10).
- 2. U. piř-e, pirs-i, etc. 'quod, si, cum', e.g. sersi pirsi sesust 'sede cum sederit' (VIa 5), persei pir orto est 'si ignis ortus est, in case fire has broken out' (VIa 26 etc.; similarly peře IIa 3), persei mersei 'si ius sit, in so far as is right' (VI a 28 etc.), with which compare L. quod opus siet (Cato). In form this is the Acc. Sg. N. of pis-i. It is not always to be distinguished with certainty from piř-e 'quidquid' (V a 5).
- 3. O. pon, pún, U. ponne, pone, pune 'cum'; also O. pun-um 'quandoque'. From *pom-de: L. *quom-de (cf. quam-de). See 92, 135. Another combination of pom (L. quom, cum) is to be recognized in U. (pisi)pumpe: L. (quī)quomque, (quī)cumque. See also 201, 4.
- 4. O. pan 'quam', pruter pan 'priusquam' (cf. Grk. $\pi\rho\acute{o}$ - $\tau\epsilon\rhoo\nu$ $\H{\eta}$), U. pane in postertio pane 'postquam tertium'. From *pam-de: L. quam-de. See 92, 135. The simple *pam (L. quam) appears in U. pre-pa 'priusquam'. (In O. pruter pam beside pruter pan the pam probably stands for pan, the next word beginning with m.)
- 5. O. puf, U. pufe 'ubi'. From stem *quu- (200, 3) and an adverbial ending -dhe (cf. Skt. ku-ha 'where?', O.Bulg. ku-de 'where'), or -dhi (Grk. - $\delta\iota$). U. ife 'ibi' has the same ending, the b in L. ibi being due to the analogy of ubi (b = dh after u).

In L. ubi, ibi, the final i is not the original short vowel, but is shortened from $-\bar{\imath}$, this from -ei (cf. early L. ubei), which arose under the influence of the adverbs in -ei representing Locatives of o-stems. U. pufe might also represent such a form, but it is far more likely that it preserves the original -dhe, only without syncope as in Oscan (cf. O. pon: U. ponne).

6. O. puz, pous (mistake for pus; see footnote, p. 40), U. puz-e, pus-e, pus-ei, etc. 'ut' (in Umbrian also 'quasi'). This stands for *pu-t-s (137, 2), in Umbrian with added $-\bar{\imath}$, containing the stem * $q^{\mu}u^{-}$ (200, 3) and an adverbial ending -the (cf. Av. ku- θa 'how') or -ti (as in au-ti etc.), with loss of the final vowel and addition of -s (as in L. ab-s, O. az, i.e. ad-s, etc.).

L. ut is the same form without the added s, the latter appearing in usquam etc. L. utei, $ut\bar{i}$, is like ubei etc.

- 7. U. pue, pue 'ubi, where'. From * $p\bar{o}$ (L. $qu\bar{o}$) with enclitic - \bar{i} .
- 8. U. ape, appei, ape, api, ap 'ubi, cum' (always temporal). From *ad-pe, in form like L. atque, but with a different force of the particle (cf. Grk. dial. ἔσ-τε, ἔν-τε 'until'). In U. ap the final vowel is lost as in L. ac, while the other forms probably contain the enclitic -ī, like pusei, puz-e, etc.
- 9. O. adpúd 'quoad'. Formed like L. quo-ad (rarely ad- $qu\bar{o}$), except that púd is probably the same as pod (above, 1), and so cognate with L. quod rather than with $qu\bar{o}$.
- 10. U. arnipo 'donec, until'. From ar 'ad' (132, a) and -ne (as in per-ne etc., or negative?) +*pom or *pod. Cf. L. $d\bar{o}nicum$, $d\bar{o}nec$.
- 11. U. nersa 'donec, until', used after a negative clause. From *ne- $d\bar{a}m$; cf. L. -dam in quon-dam etc., and dum.
- 12. U. panupei 'quandoque'. From *pan-dō-pid: L. quandō-que. For -pei see 201, 4.
- 13. O. púkkapíd, pocapit, p]ocapid 'quandoque'. From *pod- $k\bar{a}d$ (?)-pid, the second element being perhaps Abl. Sg. F. of the stem seen in L. -ce, like O. dat 'de' from do- (190, 3, a).
- 14. O. svaí, suae, U. sve, sue 'si', no-sue 'nisi'. From *suai, Loc. Sg. F. of suo-, while L. sī is from *sei, Loc. Sg. N. of so-. Cf. Grk. ai and ei from stem so- or o-.

- a. The relation of U. sopir, VI b 54, to svepis 'siquis' of the parallel passage I b 18, is puzzling. That it cannot be regarded as a later form of the same word is obvious from sue beside sve. The first syllable may be $s\bar{o}$ from *soi, and it is conceivable that this *soi is from an earlier *suei, though such a change is only imperfectly paralleled by that seen in sonitu (37, a). Another view is that sopir is not 'siquis', but an Indefinite Relative 'quisquis', and contains a generalizing particle *sod or *suod, related to the so in Eng. whoso, whosoever. But the chief support for this, the derivation of Grk. $b\tau\iota s$ from $*\sigma_{F}o\delta$ - $\tau\iota s$, is not beyond question.¹
 - 15. U. et 'et': L. et, Grk. ἔτι, etc.
- 16. O. inim, inim, εινειμ (44), abbr. in. 'et'; U. enem, eine, ene, inen-ek (for *inem-ek), and ennom, eno(m), enum-ek, inum-ek, etc. 'tum, deinde'. These forms, together with Pael. inom 'et', are obviously connected with L. enim (einom of the Duenos inscription is best left out of account) in some way,—exactly how is not so clear.

The ending -im of L. enim is seen in the Oscan forms and in U. enem etc., while U. enom etc. with Pael. inom show -om. The difficulty is with the initial vowel. The Oscan forms point to i or \bar{e} , not e. Pael. inom also points to i or (possibly) \bar{e} . The various Umbrian spellings are most easily combined on the basis of \bar{e} , but i is also possible. On the whole, in view of L. enim, the probability is perhaps in favor of $*\bar{e}nim$ and $*\bar{e}nom$, but the matter is quite uncertain. The nn in ennom is very likely due to the influence of the correlative ponne.

- 17. O. auti, aut, avt 'aut, at', U. ote, ute 'aut': L. aut, autem. From *au (Grk. $a\hat{v}$, $a\hat{v}$ - $\tau\epsilon$), with the same -ti as in *eti (et), *toti (L. tot), etc. The Oscan forms with and without apocope (92) were differentiated in meaning at Bantia, where auti is 'aut', aut 'at'. Elsewhere we find only avt, usually 'at', once 'aut'.
- 18. O. loufir 'vel'. In form this is a 3d Sg. Pass. of the root seen in L. libet (96, 238, 2), in the impersonal use (239). For the development of meaning, cf. L. vel, Imperat. of volō, and the following.
- 19. U. heris . . . heris, heri . . . heri, herie . . . herie, etc. 'vel . . . vel'. These are from *heriō 'volo', partly 2d Sg. Pres. Indic. (heris, heri), partly 3d Sg. Perf. Subj. (herie, heriei).

¹ See Delbrück, Vergl. Syntax, III, pp. 339 ff.

151

20. The negatives. Oscan has (1) ne (L. ne-fas, ni-si from *ne-sei, etc.), (2) ni (L. nē), (3) nei (L. nī); and for each of these a corresponding form with the enclitic -p, corresponding to -c, -que, in L. nec, neque, namely 1) nep, nep, 2) nip, 3) neip, neip. As regards use, ne occurs in ne pon 'nisi cum' and as a prohibitive with a pronoun in ne phim pruhipid 'ne quem prohibuerit', while ni is always prohibitive, and nei occurs in conditional clauses, suaepis nei, nei suae. But all three compounded forms have the prohibitive force, 'neve', though neip is also used like nei, e.g. svai neip.

Umbrian has nei in neiřhabas 'ne adhibeant' (84), otherwise neip, neip (once nep), both prohibitive and simple negative. Whether this corresponds to O. neip or nip or both is not clear, the spelling ei being remarkable in any case. See 29, b. U. no-sue 'nisi' probably contains *noi, a by-form of nei.

VERBS

On the general system of conjugation, see 13.

THE PERSONAL ENDINGS

203. The personal endings of the Indicative and Subjunctive Active are:

P	RIMAR	Y SECONDARY	Primary	SECONDARY
	Si	ngular	P	lural
1.	$-ar{o}$	<i>-m</i>	1. —	
2.	-8	-8	2. —	
3.	-t	-d (lost in U.)	3nt	-ns

For the endings of the Imperative, see 235-237; for those of the Passive, see 238-239.

Primary and secondary endings, which, in contrast to Latin, are clearly distinguished in the Third Singular and Third Plural, are used as follows: primary in the Present, Future, and Future Perfect Indicative, — secondary in the Imperfect and Perfect Indicative and in all tenses of the Subjunctive.

Remarks on the Endings

204. 1. The original endings of the Third Singular and Third Plural were primary -ti, -nti, secondary -t, -nt. By the loss of the final i (92) the former became -t, -nt, but in the meantime the original -t, -nt, had undergone a change, as follows:

The -t became -d, which is preserved in Oscan, and existed in early Latin (feced etc.) until the primary ending was generalized. In Umbrian this, like every final d, was lost; but since even final t is sometimes omitted in the writing, the distinction is less clear in Umbrian than in Oscan. See 127, 1, 2, 133.

The -nt probably became first -nd, then -n (cf. L. dan-unt etc.), and to this an s was added under the influence of the plural ending of nouns. See 128, 1.

- 2. In -nt the n is regularly written in Umbrian (the only exception is furfal (25, a) beside furfant), while in Oscan it is omitted in the case of -ent (the only exception being one occurrence of sent beside set), but written in stahint and eestint, the only forms occurring which do not end in -ent. In -ns the n is always written in Oscan but frequently omitted in Umbrian. See 108, 1, 2. For U. fefure and staheren, see 128, 2, a.
- 3. The plural forms in -ent, -ens, represent the full endings, original -enti, -ent, which belong properly to unthematic formations like U. sent, O. set (cf. Dor. ἐντὶ for *έντὶ, Skt. sánti, Goth. sind, I.E. *senti). But they have been extended at the expense of thematic forms, just as in Latin, vice versa, -ont (-unt) has completely driven out -ent. Thus we have -ent in the Future and Future Perfect, which are thematic formations; and -ens in the Perfect, which, while containing types of various origin, is always thematic in the Third Singular.
- a. It is probable that the same encroachment of -ent upon -ont is to be recognized in O. filet as compared with L. fiunt, and likewise in O. stalet. But some believe that the original ending of verbs of this class was -ienti or -inti. For the double formation in the Fourth Conjugation, represented by O. filet, stalet, and O. stahint, eestint, see also 215, 2.

- 4. In the Second Singular in Umbrian the -s is sometimes omitted or changed to -r. Thus seste 'sistis', heri, heri 'vel' beside heris (see 202, 19), sir, sei, si 'sis'. See 113 with b.
- 5. The secondary ending of the First Singular occurs only in O. manafum 'mandavi', and in O. súm 'sum' (217, 1).
- 6. The primary ending of the First Singular, $-\bar{o}$, seen in U. sistu 'sisto', is not contracted with the preceding \bar{a} of the First Conjugation as in Latin. Thus U. subocauu, subocau 'invoco' from $-\bar{a}\dot{i}\bar{o}$. Cf. also U. stahu 'sto' from *sta $\dot{i}\bar{o}$. See 83.
- 7. The Latin shortening of vowels before final t is unknown. See 78, 3. So O. faamat is to be understood as $f\bar{a}m\bar{a}t$, O. kasit 'decet' as $kas\bar{\imath}t$ (with $\bar{\imath}$ from \bar{e}), etc. For the vowel-quantity before -nt, -ns, see 78, a.
- 8. The short *e* of the Second and Third Singular Present Indicative of the Third Conjugation, and of the Third Singular Perfect Indicative, does not suffer syncope. See 90, 2.

EXAMPLES OF CONJUGATION

The following paradigms include all the verb-forms occurring in Oscan or Umbrian (barring some variations in spelling), except where an "etc." is added, that is in the 2d and 3d Sg. Imperat. Act., the 3d Sg. Fut. Perf., and the Perf. Pass. Partic. (including the periphrastic Perf. Indic. Pass.). A few Paelignian (P.), Marrucinian (M.), and Vestinian (V.) forms are included.

In the Perfect System there are given under the First and Fourth Conjugations only those types which are characteristic of these conjugations, namely, in the following order, the f-, tt-, and nki-Perfects (and, in the Fourth, U. purtiius etc.). The other types, which are found with verbs of all conjugations, but mostly with those of the Third, are given under the Third only, namely, in the following order, the reduplicated Perfect, the simple Perfect without vowel-change, the Perfect with lengthened vowel, and the l-Perfect.

Under the Fourth Conjugation are included the forms corresponding to the Latin type $capi\bar{o}$. See 216.

FORMATION OF THE MOODS AND TENSES

THE PRESENT STEM

Conjugation I — Present Stem in ā

- 210. 1. As in Latin, this conjugation is made up mainly of Denominatives. Thus O. moltaum 'multare' from molto 'multa', U. kuraia 'curet', etc. See 262, 1.
- 2. The Frequentatives, also of denominative origin, are represented; e.g. U. etaians 'itent': L. itō. See 262, 1.
- 3. Primary Verbs like L. seco, domo, etc., are: U. prusekatu 'prosecato', U. mugatu 'muttito', O. dadíkatted 'dedicavit', O. censaum 'censere' contrasted with L. censeo of the Second Conjugation; here probably O. sakahíter 'sanciatur' from sakā- (cf. sak- in L. sacer etc.).
- a. The inflection of the Present is in the main that which belongs properly to the primary verbs, in which the endings were added directly to the \bar{a} . denominatives, which are formed from \bar{a} -stems with the jo-suffix, furnish the First Singular (204, 6). In the other forms they would probably by regular contraction show partly \bar{a} , partly \bar{o} , before the endings; but under the influence of the primary verbs the \bar{a} is generalized. However, whatever contraction took place here occurred in the Italic period, and the O.-U. forms throw no new light on the Note that *sta-iō, U. stahu 'sto' follows the Fourth Conjugation (215).
- b. The interchange of conjugation between O. dadikatted 'dedicavit' and deicum 'dicere' is the same as between L. $dic\bar{o}$, $d\bar{e}$ - $dic\bar{o}$, etc., and $d\bar{c}c\bar{o}$; and with L. occupō beside capiō, compare U. anzeriatu'observatum' beside seritu 'servato'. Cf. also U. andirsafust 'circumtulerit' beside dirsans 'det' (O. didest etc., 213, 4).

211. As in Latin, the \bar{a} is not confined to the Present System, but normally runs through the whole conjugation. U. kuratu, pihaz, pihafi, çersnatur, O. deiuatuns, teremnatu, teremnattens, prusatted, etc. But there are also some forms of the Perf. and Perf. Pass. Part. without the \bar{a} , as is the case with several of the Latin primary verbs, such as domō, domuī, domitum, secō, secuī, sectum, etc. Thus U. aseceta 'non secta', prusecetu, proseseto 'prosecta', beside Imperat. prusekatu (in prusektu which occurs in the same line with prusekatu and in the same meaning, the a is omitted by mistake); — O. ancensto 'incensa' beside Infin. censaum; — U. muieto 'muttitum' beside Imperat. mugatu; — portust 'portaverit' beside Imperat. portatu; — O. upsed 'fecit', 3d Pl. uupsens, Partic. U. oseto (but O. upsatuh), beside Gerundive O. úpsannam, Imperat. U. osatu. So doubtless O. urust 'oraverit', U. frosetom 'fraudatum' (262,1), uasetom, uasetom 'vitiatum' (L. vacō; s, s, by 144), pesetom 'peccatum' (144), though Present forms are lacking.

Conjugation II - Present Stem in ē

- 212. Verbs of this conjugation comprise the same classes as in Latin, namely:
- 1. Denominatives like L. albeō from albus. So O. turumiiad 'torqueatur' from *tormo- (cf. L. tormentum), O. fatíum 'fari', O. pútíad 'possit'. See 262, 2.
- 2. Causatives like L. moneō. So U. tursitu 'terreto' with the regular o-grade (51, 97) as in L. moneō beside meminī etc.
- 3. Primary Verbs like L. *liceō*, *sedeō*, etc. So O. líkítud, *licitud* 'liceto', kasit 'decet'; U. *habe* 'habet', tiçit 'decet', *sersitu* 'sedeto', *tenitu* 'teneto', uřetu 'adoleto'.
- a. The relation of the inflection of the Present to that which belonged originally to the primary verbs in \bar{e} on the one hand and the denominatives and causatives in $-e\bar{i}o$ on the other is similar to what is seen in the First Conjugation (see 210, a). For the i in O. pútiad, U. habia, etc., and in O. licitud, U. tursitu, etc., see 38, 1, 39, 1, and 41, 42.
- b. Owing to the ambiguity of the spelling ($i = \bar{e}$ or \bar{i} , $e = \bar{e}$ or, rarely, \bar{i}) there are several Umbrian forms, without precise cognates in Latin, of which it is impossible to say with certainty whether they belong to the Second or Fourth

Conjugation. To the Second belong probably tremitu (L. $trem\bar{o}$), sonitu (L. $son\bar{o}$), nepitu (cf. L. $Nept\bar{u}nus$), which are used transitively ("overwhelm with terror, noise, and water") and may be modeled after the causative type (tursitu); perhaps also sauitu in the same passage, but of uncertain meaning and derivation ('sauciato'?). That sonitu is of the Third (early L. sonit etc.) is less likely, for, though the short vowel is not lost after n (88, 1), we should expect *sonetu. In trebeit 'versatur' the ei points to $\bar{\imath}$ (48), but may also stand for \bar{e} (42), and the meaning rather favors the Second Conjugation. To the Second belong also, without much doubt, eveietu 'voveto' (148); carsitu, kařetu, kařitu 'calato' contrasted with L. $cal\bar{\imath}$ of the First; upetu 'optato, deligito', with Perf. Pass. Partic. opeter 'lecti, choice', of which L. $opt\bar{\imath}$ represents the iterative formation $(opt\bar{\imath}$ from opeto-, the same stem as in U. opeter, whence also L. optimus).

Conjugation III - Present Stem in e/0

- 213. 1. Most verbs of this conjugation, as in Latin, show the simple root with the thematic vowel. Thus O. acum 'agere', O. actud, U. aitu, from *agetōd (143); O. edum 'edere'; U. emantur 'accipiantur'; O. pertumum 'perimere'; O. deíkum 'dicere', deicans, U. deitu (143), etc.
- a. Here also, in contrast to their Latin cognates, O. kahad 'incohet', U. amboltu 'ambulato', and U. vutu 'lavato' (but also L. lavit beside lavat).
- 2. Presents in $-n\bar{o}$ like L. $cern\bar{o}$ are represented by O. patensíns 'aperirent' from $*patn\bar{o}$ or $*paten\bar{o}$ (as if L. $*patin\bar{o}$).
- 3. Presents with inserted nasals like L. $rump\bar{o}$, $vinc\bar{o}$, are represented by O. uincter 'vincitur', U. ninctu 'ninguito'.
- 4. Reduplicated Presents like L. sistō, gignō, are represented by U. sestu 'sisto'; and by *didō, seen in O. didest 'dabit', U. teřa, dirsa 'det', dirsans (131), teřtu, dirstu, titu, ditu 'dato' (132 with note), teřte 'datur' (also Vest. didet 'dat', Pael. dida 'det').
- a. Here also, with loss of reduplication in composition, O. da[da]d 'dedat' from *dad- $did\bar{o}$ (cf. L. $redd\bar{o}$ from *re- $did\bar{o}$); and U. restef, reste 'instaurans, renewing' from *re- $sist\bar{o}$. On account of the meaning this view of U. restef is far more probable than connection with U. stahu 'sto' etc. (215, 1). For the same reason U. restatu 'instaurato, offer' is also best taken as a reduplicated formation (cf. Volsc. sistiatiens, Pael. sestatiens(?) 'statuerunt'), with transfer to the First Conjugation (see 210, b), or, less probably, with retention of original * $sist\bar{a}$ (Grk. $lor \eta \mu u$).

¹ Also recognized by Hempl, with great probability, in the Duenos inscription. See Trans. Am. Phil. Ass. 33, 157.

- 5. There are no examples of Presents like L. $cr\bar{e}sc\bar{o}$, in which the termination is confined to the Present System. But there are some forms parallel to L. $posc\bar{o}$ in which the original Present-suffix has become a part of the verb-stem. Thus U. perstu 'ponito'(?) from * $persket\bar{o}d$ (146), to which belongs the Fut. Perf. peperscust; O. comparascuster 'consulta erit' (145); U. eiscurent 'arcessierint' (29, a).
 - 6. For Presents like L. capiō, see 216.

Conjugation IV - Present Stem in i

- 214. The verbs of this conjugation comprise:
- 1. Denominatives like L. $f\bar{\imath}ni\bar{o}$. So U. persnihimu 'precator' from *persni-. See 262, 3.
- 2. Primary Verbs like L. $veni\bar{o}$. So O. heriad 'capiat', fakiad 'faciat', U. façia etc.; U. heris 'vel' (2d Sg. Pres. Indic. used as adverb; see 202, 19), with Fut. heriest, Perf. Pass. Partic. hereitu, Perf. Subj. herifi. As appears from this last example, the $\bar{\imath}$ is not confined to the Present System as in most of the Latin primary verbs.
- 3. Denominatives from *u*-stems, which in Latin follow the Third Conjugation. So at least O. sakruvit 'sacrat', Fut. sakrvist, from *sakru-jō (cf. L. statuo from *statu-jō).
- 215. 1. The inflection of the Present is that which belongs properly to the primary verbs, and to a type of these, to be recognized in other languages also, in which the suffix 1-(i)io- interchanges with -ī-. The length of the i is shown by the absence of syncope and in part by direct evidence of the spelling. Thus U. an-ouihimu 'induitor' (cf. Lith. aviù 'wear (shoes)'; L. induō, exuō, from *ind-ouō, *ex-ouō, of Conj. III);—U. pur-douitu 'porricito' (96); U. am-paritu 'conlocato', amparihmu (L. pariō, -periō); also, outside the Present System, U. hereitu, herifi (214, 2). Likewise in U. stahitu 'stato', beside stahu 'sto' from *stajō, the i is almost certainly long, and it is

 $^{^1}$ That the i and the i or \underline{i} of -(i) $\underline{i}o$ - may belong ultimately to the root need not concern us here.

probably long also in O. stait 'stat' in spite of the i, which may be due to the influence of the regular spelling of the diphthong ai.

2. The Third Plural shows two formations. O. filet flunt' and staiet 'stant' (ai perhaps due to stait, above, 1; from *staient would come regularly *staent) are like L. veniunt except for the usual substitution of unthematic -ent for -ont (204, 3, a); while O. stahint, eestint (89, 2) are as if we had in Latin *venint like amant, monent, and a trace of such a formation is probably to be seen in L. prōdīnunt etc. (128, 1). This double formation is paralleled by that seen in the Future, where we find U. heriest (like ferest) and O. sakrvist (like deiuast), and also by the Latin Imperfects in -iēbam and -ībam.

Note. It is uncertain which of the two formations is the earlier. The -int may represent original $-\bar{\imath}nti$ with vowel-shortening before nt, or $-\bar{\imath}nti$ (see 216, note), or may be due to the analogy of -ant, -ent ($-\bar{a}nt$, $-\bar{e}nt$), of the First and Second Conjugations. The corresponding Slavic verbs end in -ett, which points to -inti or $-\bar{\imath}nti$, but here again it is uncertain whether this is original or due to an extension of i from the other forms.

3. In U. fuia 'fiat' (Fut. fuiest) from *fu- $i\bar{o}$ (: L. $f\bar{\iota}\bar{o}$ from *fui $i\bar{o}$) the retention of intervocal i is of course due to the analogy of forms like U. façia etc.

Forms of the type of L. capio

216. In Latin many primary verbs in $-i\bar{o}$, like $capi\bar{o}$ etc., have short i instead of $\bar{\imath}$, and after the thematic vowel e of the Third Conjugation had become i, such verbs had so many forms in common with those of the Third Conjugation that they are commonly and conveniently grouped under it. In Oscan-Umbrian the great majority of the primary verbs have $\bar{\imath}$. See **215**.

Nevertheless there are some few forms which point to a short *i* which has been lost by syncope, this bringing about identity with the forms of the Third Conjugation. Thus O. factud 'facito' from *fakitōd, beside O. fakiiad 'faciat'; — O. h]erríns 'caperent' beside O. heriiad 'capiat'; — U. herter 'oportet', U. pis-her 'quilibet', probably from heri-, beside U. heris,

hereitu, herifi (215, 1) with herī-; — U. hahtu, hatu, probably from *hapitōd (218). Whether O. stait, stahint, belong here is doubtful (see 215, 1, 2).

Note. The short i in Latin has been recently explained as having arisen in capis, fugis, etc. by iambic shortening (all the verbs of this type have the first syllable short), from which it spread to the other forms. That the iambic shortening has been a contributory factor is altogether probable. But there was already a nucleus of forms with inherited short i, for which there is evidence in other languages. Otherwise, since iambic shortening is a purely Latin phenomenon, we should have to separate O. factud from fakilad and L. $faci\bar{o}$ and assume for it a different Present Stem.

Irregular Verbs

- 217. Irregular verbs, that is such as do not conform to any of the four regular types and are mainly characterized by the presence of the unthematic forms, are confined to the two verbs 'to be' and 'to go' given in the paradigm (209). For U. fertu is, in view of the Subj. ferar and Marruc. feret 'fert', ferenter 'feruntur', better taken as thematic, from *feretōd; and U. veltu 'deligito', ehueltu, are from *ueletōd (105, 2). The Perfect System of U. fertu is supplied, not by a form corresponding to L. tulī, but by a form belonging to *didō 'do', at least in andirsafust (210, b), which belongs in use with U. anferener 'circumferendi'.
- 1. O. súm points to *som, whence also L. sum. This is apparently a thematic form with secondary ending, which as an Injunctive has come to be used in place of the original form of the Present Indicative.
- 2. O. est, U. est, agree with L. est (Grk. $\check{e}\sigma\tau\iota$ etc.). But O. ist, which is the invariable spelling of the Cippus Abellanus (7 occurrences) and so cannot possibly be a mere graphic variation of est, must be a different form. It can represent $*\check{e}st$ ($i = \bar{e}, 41$) with $\bar{e}s$ standing in the same relation to the usual es- as the $\bar{e}d$ in L. $\bar{e}st$ to the usual ed- of $ed\bar{o}$ etc.
- 3. As regards the distribution of the roots es- (Grk. $\epsilon\sigma$ -, Skt. as-, etc.) and $f\bar{u}$ (Grk. $\phi\bar{v}$ -, Skt. $bh\bar{u}$ -, etc., 124), observe

- O. fusíd agreeing with L. foret rather than with esset, O.-U. fust contrasted with L. erit, and U. futu contrasted with O. estud, L. estō.
- 4. O. amfret 'ambiunt', for which one would expect *amfriiet or *amfrint, is probably a form of the Second Conjugation, into the analogy of which the Present had been drawn by the First Singular *amfreo, just as in Latin, vice versa, ambio follows the Fourth Conjugation, starting from ambis, ambit, etc. In both cases the isolation from the simplex is due to the fact that the prefixes were unusual, making the composition less obvious.

U. ambretuto 'ambiunto' etc. may also belong to the Second Conjugation, but here there is no difficulty in assuming the original unthematic inflection, the e corresponding to $\bar{\imath}$ in L. $\bar{\imath}t\bar{o}$ and both representing original ei.

Remarks on the Forms Connected with L. habeō

218. U. habe 'habet', Pres. Subj. habia, Imperat. habitu, habetu, belong with L. habeō to the Second Conjugation. But the Future U. habiest shows a formation which belongs properly to the Fourth Conjugation. This might have arisen by analogy, owing to the resemblance between forms like habia (with i for e, 39, 1) and those of the Fourth Conjugation. However, the intimate relation between io- and e-formations is well known, and habiest may belong to a lost present *habiō.

U. neiřhabas 'ne adhibeant' may be compared with early Latin advenat, tagam, etc., in which the usual Present Stem does not appear.

The $h\bar{e}p$ - of O. hipid 'habuerit', pruhipid 'prohibuerit', Fut. Perf. hipust, pruhipust (cf. also U. eitipes, 264, 2) is best explained as a contamination of the roots seen in L. $habe\bar{o}$ and $capi\bar{o}$, $c\bar{e}p\bar{\imath}$.

A Present *hapiō is also to be assumed with great probability for U. hahtu, hatu 'capito', from *hapitōd (216) through *haptōd, *haftōd (121); to which belong further U. subahtu 'deponito', subotu (? see 35, a), and subator 'omissi' (for the lack of the initial h, cf. an-ostatu beside an-hostatu etc., 149, a).

O. hafiest 'habebit' is very likely a mistake for *hapiest, formed from *hapiō, like U. heriest from *heriō. In this case all the Oscan forms would belong to *hapiō.

Note. L. habeō has often been connected with Gothic haban, Eng. have, etc., on the basis of a root khabh. But the Umbrian forms point unmistakably to a root ending in b, not bh, and the Germanic words are probably from the same root as Goth. hafjan, L. capiō. O. hafiest with f stands absolutely alone, and is irreconcilable with U. habe etc., except on the assumption of a by-form of the root. Without further evidence for f it seems more likely that it is a mistake for *hapiest (cf. fepacid for fefacid; even as it stands hafiest contains one obvious correction, the reading being hafiert).

Remarks on the Forms Connected with L. facio

219. The Pres. Subj. O. fakiiad, U. façia, Infin. façiu, façu, Imperat. O. factud, agree entirely with the Latin inflection. But the Umbrian Imperat. fetu, feitu, cannot correspond to O. factud, for we should have *faitu like aitu to O. actud (143). It must rather come from *fēk(e)tōd or fēk(i)tōd with the form of the root seen in L. fēcī.

The participles U. aanfehtaf and feta, if belonging here, are also from $f\bar{e}k$ -.

U. feia 'faciat', beside façia, is also, probably, from $f\bar{e}k$. We should expect *feçia, but see 144, b, on U. peiu.

Note. It is noteworthy that in the Imperative form the spelling with e is far more common than that with ei (fetu 48 times, fetu 52 times, feetu once: feitu 20 times, feitu 5 times), while in all other examples the diphthong resulting from the change of k to i remains unchanged, not only in aitu, but also in -veitu and deitu (143). The reason for the difference lies in the quality of the first vowel. The e was an open e in both -veitu (orig. e) and deitu (open \bar{e} from ei; see 65), and did not contract with the following i, while in feitu the \bar{e} was a close \bar{e} (orig. \bar{e} ; see 42) and did suffer contraction. In the same way ie was contracted only when the e was close (82, 2, with a). Thus the spelling fetu, fetu, represents the contracted form, while feitu, which is nearly as common as fetu in Old Umbrian, is a retention of the old spelling prior to the contraction.

In all the examples where we have assumed $f\bar{e}k$ -, some prefer $f\bar{e}$ -. This is somewhat easier for feia, but less satisfactory for fetu, feitu. Moreover it is probable that in the meaning 'do, make' the Italic root is always $f\bar{e}k$ -, fak-, though this, of course, is an extension of an earlier $f\bar{e}$ -, fa- (Grk. $\theta\eta$ -, Skt. $dh\bar{a}$ -, etc.), which is preserved in L. $cond\bar{o}$ etc. and in O. prúffed, prúftú (see 223 with footnote).

The Imperfect Indicative

220. The only extant form is O. fufans 'erant', showing the same formation as in Latin. A form serving as the past tense of the verb 'to be', namely * $bhu\bar{a}$ -, whence O. $f\bar{a}$ -, L. $-b\bar{a}$ (124), was added to case-forms in $-\bar{a}$, $-\bar{e}$, giving a periphrastic formation, and this was then extended to root-forms, as in L. dabam, $\bar{\imath}bam$, with which O. fufans is most closely connected.

The Future Indicative

221. This is in origin a short-vowel Subjunctive of an s-Aorist, identical with the Homeric short-vowel forms of the Aorist Subjunctives. In the Second and Third Singular the e suffers syncope (90, 2), and in the Third Plural the -ont is supplanted by -ent, as regularly (204, 3). Thus O. deiuast 'iurabit', censazet 'censebunt', U. prupehast 'piabit', from -āset, -āsent; — U. ferest 'feret' from *fereset; — U. ostensendi 'ostendentur' from *ostendesenter (137, 2, 156); — O. fust, U. fust (fus, 127, 3) 'erit', furent 'erunt', from *fuset, *fusent; — U. eest, est 'ibit' from *eiset, etc.

Although the s-aorist is properly formed from the Verb-Stem, the Future has come to follow the Present Stem even where it differs from the former. So O. didest 'dabit' with the Present reduplication, U. heriest (heries, 127, 3) 'volet', O. herest (100, 3, c), U. purtuvies 'porricies', fuiest 'fiet', with the -io- of the Present Stem. In the Fourth Conjugation there are two formations, as regards the stem, related to one another as the Latin Imperfects leniēbam and lenībam; e.g. U. heriest etc.,—but O. sakrvist 'sacrabit' (Pres. sakruvit). The latter is analogous to deiuast.

The Perfect Indicative

222. This tense, as in Latin, includes various formations. While the $v\bar{\imath}$ - and s-Perfects of the Latin are lacking, their place is taken by others specifically Oscan-Umbrian. The f-, tt-, and

nki-Perfects (227-229), though having no formal connection with the Latin $v\bar{v}$ -Perfect, resemble it in scope, in that they are mainly confined to the First and Fourth Conjugations.

Note. An s-Perfect, that is, an s-Aorist in origin, is assumed by some for U. sesust 'sederit', andersesust. But this is probably based on the participal stem *sesso- with ss from two dentals (138). A vī-Perfect is also assumed by some, but with even less justification.

The endings are the same as in other secondary tenses. In illustrating the different types, forms of the Perfect Subjunctive and Future Perfect are included.

- 223. Reduplicated Perfect. Examples: O. deded 'dedit', U. dede (131, c), with Fut. Perf. U. teřust, dirsust, from *dedust (by 131); O. fefacid 'fecerit'; U. peperscust 'posuerit'(?); U. pepurkurent 'poposcerint'; U. fefure 'fuerint' (128, 2, a); U. dersicust 'dixerit' from *dedikust (by 131); O. prúffed 'posuit' from *pro-fefed: L. prō-didit,¹ con-didit, etc. (for the ff cf. L. rettulī, reppulī, for *re-tetulī etc.); O. aa-manaffed 'mandavit, locavit' from *man-fefed (80, 2), as if L. *mandidit like condidit etc. (see 264, 2), manafum 'mandavi'; O. fifikus 'decreveris'(?).
- a. In all examples but the last the vowel of the reduplication is e. This is the original vowel of the Perfect reduplication, but in Latin, after the analogy of $tetend\bar{\imath}$ to $tend\bar{\imath}$, etc., it was replaced by an i, u, or o, of the root-syllable wherever the latter was the same in both Perfect and Present; e.g. $momord\bar{\imath}$ for earlier $memord\bar{\imath}$, $cucurr\bar{\imath}$, etc., but $pepul\bar{\imath}$. O. fifikus, if connected with L. $f\bar{\imath}g\bar{o}$, U. fiktu, is an example of a similar, though independent, development in Oscan-Umbrian. None of the other Perfect forms is necessarily at variance with such an assumption, for in U. dersicust and fefure there is no identity in the root-syllable of Present and Perfect, and for U. pepurkurent the Present is unknown.
- 224. Simple Perfect without reduplication. Examples: O. kúmbened 'convenit', O. cebnust (ce- prefix as in L. cedo), U. benust 'venerit'; O. dicust 'dixerit'; O. avafaκετ 'dedicavit' (80, 2), U. fakust 'fecerit'; U. habus 'habuerit'; O. dadid

¹ The meaning of O. pruffed and pruftu (244, 1) agrees more nearly with that of Grk. $\pi \rho o \tau l \theta \eta \mu \iota$ than with that of L. $pr\bar{o}d\bar{o}$. In the Latin compounds in $-d\bar{o}$ are merged forms of the roots $dh\bar{e}$ - 'put' and $d\bar{o}$ - 'give', and the existence of the former is less obvious in $pr\bar{o}d\bar{o}$ than in $cond\bar{o}$, which is therefore a more certain cognate of the Oscan forms.

- 'dediderit'; U. couortus, courtust 'converterit'; O. pertemust 'peremerit', peremust 'perceperit'; U. procanurent '*procinuerint'; U. eiscurent 'arcessierint'; U. portust 'portaverit'; O. urust 'oraverit'; O. comparascuster 'consulta erit'; O. aflakus 'detuleris'(?).
- a. As in Latin, it is impossible to distinguish always between forms which are in origin simple thematic Aorists, like Grk. ἔλιπον etc., and those which belong historically to the Reduplicated Perfect, but have lost the reduplication in composition or, by analogy, in the simplex, as L. scidī beside earlier scicidī etc. Loss of reduplication is most evident in cases like O. dicust beside U. dersicust or U. fakust beside O. fefacid. O. dadid and U. procanurent are doubtless examples of loss of reduplication in composition. O. urust and U. portust from verbs of the First Conjugation (see 211) are, of course, not original formations.
- b. U. iust 'ierit' is parallel to L. $i\bar{\imath}$, and U. purtiius 'porrexeris' is an extension of the same type, like L. $audi\bar{\imath}$ after $i\bar{\imath}$. With purtiius belongs also U. heriiei 'voluerit' (234, note).
- **225.** Perfect with lengthened vowel in the root-syllable. Examples: O. hipid 'habuerit', hipust, etc. (218), U. prusikurent 'pronuntiaverint' (cf. also O. sipus 'sciens', 90, 1, b), with \bar{e} , like L. $c\bar{e}p\bar{\imath}$, $v\bar{e}n\bar{\imath}$, etc.; further O. upsed 'fecit', uupsens, upsens, $ov\pi\sigma\epsilon\nu\varsigma$, with \bar{o} (53) in contrast to o of the Present (úpsannam etc.).
- a. By lengthened vowel is meant here simply a long vowel in contrast to a short vowel of the Present. It represents an inherited variation; e.g. $\bar{e}:a$ in O. hipid, sipus, as in L. $c\bar{e}p\bar{\imath}$ to $capi\bar{o}$ (see also 218), or $\bar{e}:e$ in U. prusikurent, as in L. $v\bar{e}n\bar{\imath}$ to $veni\bar{o}$. O. upsed belongs to a denominative of the First Conjugation, from which one would expect Perf. *úpsatted or *úpsafed, but is formed after the analogy of Perfects of primary verbs, and the \bar{o} in contrast to the o of the Present must be due to Perfects like L. $\bar{e}m\bar{\imath}$, $\bar{o}d\bar{\imath}$, etc.
- b. Observe that the forms corresponding to L. $\bar{e}m\bar{\imath}$, $v\bar{e}n\bar{\imath}$, and $f\bar{e}c\bar{\imath}$ do not follow this type. Thus O. pertemust (224); O. kúmbened, U. benust (224); O. fefacid (223), U. fakust (224), like fhefhaked of the Praenestine brooch (cf. L. $pepig\bar{\imath}$ beside $p\bar{e}g\bar{\imath}$).
- 226. The *l*-Perfect. This is found in Umbrian only, the examples being Fut. Perf. entelust 'imposuerit', 2d Sg. entelus, and apelust 'impenderit', 2d Sg. apelus. These are based on participial forms *en-tend-lo-, *am-pend-lo- (-lo- is a regular participial suffix in the Slavic languages; cf. also L. pendulus, crēdulus, etc.), with the change of ndl through nnl, nl, to ll (135).

The type doubtless arose in the Future Perfect, which is of participial origin, and as the only examples are in this tense it is impossible to say whether it ever extended to the Perfect, giving such forms as *enteled etc. If not, its mention here among the Perfect types is only justified by convenience.

227. The f-Perfect. Examples: O. aikdafed 'decrevit'(?);—O. sakrafir 'sacrato'; — U. andirsafust 'circumtulerit'; — U. pihafi 'piatum sit'; — U. herifi 'oportuerit'; — probably U. cehefi 'accensum sit'; — O. fufens 'fuerunt'; — U. amprefuus 'ambieris', ambrefurent 'ambierint'.

This f-Perfect is a periphrastic formation like the Imperfect, the second element in this case being *bhuom, *bhues, *bhuet, etc., that is, a past tense formed from the root 'to be' with the thematic vowel. The Latin Futures like $am\bar{a}b\bar{o}$ contain the same form, but in its Subjunctive function.

228. The tt-Perfect. This is found in Oscan (with Paelignian, Marrucinian, and Volscian) but not in Umbrian. Oscan examples, all of the First Conjugation, are: prufatted 'probavit', Pl. prufattens; — dadikatted 'dedicavit'; — teremnattens 'terminaverunt'; — tribarakattins 'aedificaverint'; — lamatir, lamatir 'caedatur'(?); — d]uunated 'donavit'. Cf. Pael. coisatens 'curaverunt', Marruc. amatens, Volsc. sistiatiens 'statuerunt'. This formation is probably based on the to-Participle through the medium of the Future Perfect (cf. the Umbrian l-Perfect), but so long as the double t is left unexplained its history must remain obscure.

Note. It is possible that a contamination of the to-Participle and the μes -Participle resulted in a form with t u (e.g. $-t u \bar{v} s$) which then became tt. But it is difficult to support the change of t u to tt.

- a. O. angetuzet 'proposuerint', the etymology of which is wholly uncertain, has sometimes been taken as a t-Perfect. But without further evidence of a t-Perfect in the Third Conjugation, it seems more probable that the t belongs to the root (get- or gent- with prefix an-). By any theory the fragmentary angitu.., if related, is puzzling on account of the i.
- 229. The nki-Perfect. This is found in Umbrian only, the examples being Fut. Perf. purdinsiust 'porrexerit', purdinsust, purdinsus, 2d Sg. purtinçus; combifiansiust 'nuntiaverit',

combifiansiust, combifiansiust, Perf. Subj. combifiansi; — disleralinsust 'inritum fecerit'. These forms point clearly to a formation containing nki (see 144), but its precise origin is uncertain.

Taking purdinsiust as the earlier formation, one may assume that it is based on an adjectival stem *purdinkio-, again through the medium of the Future Perfect (226). Such a form would contain an -inko- based on the O.-U. suffix $-\bar{\imath}n$ - (O. leginum etc.) like L. -iunco- based on the corresponding $-i\bar{\imath}n$ - (cf. L. ratiuncula to ratiō). But neither this nor any of the other explanations is entirely convincing.

The Future Perfect

230. For examples, see 205-209 (especially 207) and 223-229. For the omission of final t in U. 3d Sg. habus and couortus, cf. 127, 3.

The origin of this formation is disputed, but the most probable explanation is that it is periphrastic, a combination of a short-vowel Subjunctive of the verb 'to be' with an old Nom. Sg. of a Perf. Act. Partic. in -us, a possible relic of which is O. sipus 'sciens' (90, 1, b). The forms would then be 2d Sg. -us-ses, 3d Sg. -us-set, whence by syncope -us(s), -ust. After the analogy of the Future, e.g. after -azent to -ast, would arise beside -ust the 3d Pl. in -uzent (O. -uzet, -uset, U. -urent).

Note. Another possibility is that the type is formed from the Perfect Stem after the analogy of the Future fust 'crit'. Connection with the Latin $v\bar{\imath}$ - and $u\bar{\imath}$ -Perfect, which is strongly urged by some, seems to the author the least likely view.

a. U. uesticos 'libaverit' (VI b 25) beside Imperat.uesticatu is taken by some as coming from *uestikaust, but we should expect rather *uesticafust, or *uesticust like portust. It probably stands for uesticos fust, and is a to-Participle, like U. pihos 'piatus', but used here in the Active sense like U. çersnatur, L. cēnātus.

THE SUBJUNCTIVE

231. The Italic Subjunctive represents a fusion of the old Subjunctive and Optative, which are kept distinct in Greek and in Vedic Sanskrit.

¹ Such an ellipsis, though perhaps without parallel in Latin, is natural enough where the Future Perfect has been used in a clause immediately preceding, and where the conjunction *arnipo* 'donec' prevents any ambiguity. But it is also possible that the omission is a mere error.

The Optative mood-sign was $i\bar{e}$, \bar{i} , for unthematic verbs, as seen in L. sim, $s\bar{i}s$, etc. (early L. siem, $si\bar{e}s$, etc.), velim, edim, etc., and also in the Perfect Subjunctive in -im etc. In thematic verbs the mood-sign, including the thematic vowel, was oi, as in Grk. $\phi\acute{e}\rhoo\iota$ etc., but of this formation there is no trace in Italic.

The Subjunctive mood-sign for unthematic verbs was identical with the thematic vowel of the thematic Indicatives. This type, which may be called the short-vowel Subjunctive, is seen in Latin in ero and in the Future Perfect, and in Oscan-Umbrian in the Future and probably in the Future Perfect (230), but has not survived in any forms which are Subjunctives from the Italic point of view. For thematic verbs there were two moodsigns, \bar{a} and \bar{e} . The \bar{a} is seen in Latin in the Present Subjunctive of Conjugations II, III, and IV. The \bar{e} is seen in the Present Subjunctive of Conjugation I (probably, see below) and in the Imperfect and Pluperfect Subjunctive, also in the Future of Conjugations III and IV except in the First Singular. general, then, the Italic Subjunctive forms represent either unthematic Optatives with $i\bar{e}$, \bar{i} , or thematic Subjunctives with \bar{a} or \bar{e} . In Oscan-Umbrian their distribution is the same as in Latin except in the Perfect Subjunctive (234).

The Present Subjunctive

232. For examples, see 205-209. In the First Conjugation the Oscan forms deiuaid 'iuret', tadait 'censeat', sakahiter 'sacrificetur', contain -āē-, from which comes L. -ē- by contraction. This -āē- from -āiē- is probably the ē-Subjunctive of -āio-, though it might also be wholly or in part the iē-Optative of an unthematic stem in -ā. The Umbrian forms portaia 'portet' etc. represent a departure from the original type and are due to the influence of such forms as U. façia, feia, fuia, etc., of the Fourth Conjugation. The forms of Conjugations II-IV agree entirely with the Latin. Of the unthematic forms, U. si, sins, etc., show the same generalization of the ī as is seen in L. sīs etc. (early siēs etc.); while O. osii[ns with ii for iē shows the

opposite extension of $i\bar{e}$, or, more exactly, represents the original *si-ent (ending -ent) with e changed to \bar{e} under the influence of forms containing $-i\bar{e}$ -.

The Imperfect Subjunctive

233. The only examples are O. fusid 'foret', h]errins 'caperent', patensins 'aperirent' (with Pael. upsaseter 'operaretur, fieret'). The i is identical with the ē in L. essēs, amārēs, agerēs, etc., and the formation represents an ē-Subjunctive of an s-Aorist. The s-Aorist, as an unthematic formation, would take the short-vowel Subjunctive, and this is preserved in the O.-U. Future (221). But, used as Subjunctives, the forms followed the analogy of the long-vowel type, which had become characteristic of Italic Subjunctives.

The Perfect Subjunctive

234. For examples, see 205-209 and 223-229. The i of O. sakrafir and tribarakattins points to \bar{e} rather than \bar{i} , so that the formation is an \bar{e} -Subjunctive.

Note. Some maintain that the two Oscan forms with i are not sufficient evidence to justify us in assuming a divergence from the Latin formation, which is an $\bar{\imath}$ -Optative; that the i of sakrafir may be a mistake such as is found in the class of inscriptions to which it belongs, and that the i of tribarakattins may stand for i, shortened from $\bar{\imath}$ before nt. As regards the latter point, the Imperf. Subj. forms like h]errins etc. beside fusid show that before the ending -ns a long vowel was either retained or restored by analogy (78, a), and so we are reasonably justified in assuming from tribarakattins a 3d Sg. *tribarakattid. As for U. heriiei, which is best taken as a Perf. Subj. 'voluerit' (and heriei, herie 'vel', which is the same form), the spelling ei is otherwise unknown for either \bar{e} or $\bar{\imath}$, but may stand for \bar{e} , like the ei in nesimei (42). It must be admitted that the material bearing on the question is scanty, but so far as it goes it points decidedly, we think, to an \bar{e} -Subjunctive.

THE IMPERATIVE

- **235.** Two probable examples of the Present Imperative are: U. aserio 'observa' and stiplo 'stipulare', both of the First Conjugation, with o for final \bar{a} (34). Here also Pael. eite 'ite'.
- 236. All other forms are such as correspond to the Latin Future Imperative.

1. The ending of the Second and Third Singular is O.-tud, U.-tu, corresponding to L.-tō, early -tōd, Grk.- $\tau\omega$, etc. (53, 54). For examples, see 205-209. All the Oscan forms are of the Third Person. In the Third Conjugation the thematic vowel suffers syncope except after n (88, 1). For U. aitu, deitu, -veitu, see 143; for U. feitu, fetu, 219.

236

2. There is no unquestioned example of a Plural in Oscan, but eituns (nos. 14–18) has often, and perhaps correctly, been taken as 'eunto'. As such it is easily explained as formed from the Singular after the analogy of the Third Plural of other tenses, where -ns corresponds to Sg. -d, e.g. Subj. -ans beside -ad, -ins beside -id, etc. It is no objection to this that the Latin and Umbrian formations are different, for both are secondary.

In Umbrian a Second and Third Plural has been formed by the addition of $-t\bar{a}$ (written -ta, -tu, -to; see 34), of uncertain origin. So fututo 'estote', aituta 'agunto', habetutu, habituto 'habento', tusetutu, tursituto 'terrento', etc.

- a. The form etatu, etato 'itatote' comes from *etatutu, *etatuto, by haplology, as L. sēmēstris from *sēmi-mēstris etc.
- 237. There is also a Passive Imperative, ending in Oscan in -mur, in Umbrian in -mu, Pl. -mumo. Thus O. censamur 'censetor'; U. persnihmu, persnihimu 'precator', Pl. persnihimumo; anouihimu 'induito', eheturstahamu 'exterminato', etc. (the Umbrian forms are all Deponents). The history of the ending is like that of early Latin -minō, in fruiminō etc., which is related to the -minō of the Second Plural (originally an Infinitive form), but modeled after the Active ending $-t\bar{o}(d)$. Similarly O.-U. *-mōd was formed after $-t\bar{o}d$, and in Oscan the d was replaced by the r of the Passive. The Umbrian pluralizing $-m\bar{a}$ is modeled after the $-t\bar{a}$.

Note. This *- $m\bar{o}d$ may come from *- $mn\bar{o}d$ and so be almost identical with L.- $min\bar{o}$. But, in the absence of other evidence for a change of mn to m in Oscan-Umbrian, the possibility must be granted that, while formed in the same way as L.- $min\bar{o}$, it started from a by-form with m, perhaps one of the cases in which an I.E. interchange of mn and m has to be recognized.

a. U. armamu, arsmahamo 'ordamini' comes from *arsmamumo by haplology, as etato 'itatote'. And this has effected a reduction in the following word, kateramu, caterahamo 'catervamini'.

THE PASSIVE

- 238. The Imperative forms have just been mentioned. In the Indicative and Subjunctive only the Third Singular and Third Plural are represented, but two different types of formation are to be distinguished. For omission of the final r in Umbrian, see 103, 4.
- 1. Forms in -ter and -tur, answering to the Latin formation with -tur. In Oscan only -ter is found, while in Umbrian -ter is used in primary tenses, -tur in secondary. Examples:

Indicatives. O. uincter 'convincitur', sakarater 'sacratur', karanter 'vescuntur', comparascuster 'consulta erit'; — U. herter 'oportet', terte 'datur'(?), ostensendi 'ostendentur' (39, 2, 156). Cf. also Marruc. ferenter 'feruntur'.

Subjunctives. O. sakahíter 'sanciatur'; — U. emantur, emantu 'accipiantur', terkantur 'suffragentur', tursiandu 'terreantur' (156). Cf. also Pael. upsaseter 'operaretur, fieret'.

2. Forms in which r alone appears as the ending of the Third Singular. This type is unknown in Latin. The most certain examples are: Pres. Subj. U. ferar; — Perf. Subj. O. sakrafír, with which belong O. lamatir, lamatir, U. pihafei, herifi, cehefi, and probably U. ier (cf. Fut. Perf. iust); — Pres. Indic. O. loufir (from *loufer beside Act. *loufet: L. libet; for meaning 'vel', see 202, 18). For the meaning of forms of this type, see 239.

The Future Perfects U. benuso, couortuso, probably belong here, standing for *benusor and *couortusor, though their precise origin is doubtful.

a. The view that U. hertei, herti, stands for *herter, and represents a Present Subjunctive of a still different type from those cited under 1 and 2, is to be given up. Though ei usually stands for a long vowel, there are a few instances of its use for short i (29) which, taken in connection with U. ostensendi with i for e before final r (39, 2), show that it is unnecessary to separate hertei from herter and other forms in -ter. Nor is the Subjunctive demanded by the syntax.

- b. O. sakraítir 'sacretur', for which one would expect *sakraíter like sakahíter, possibly owes its i to contamination with forms like sakraífir. Or shall we adopt the other possible reading sakrattir in spite of the fact that this would give us a tt-Perfect and an f-Perfect from the same verb?
- c. For O. kaispatar 'caedatur'(?) and krustatar 'cruentetur'(?), apparently related to L. caespes and crūstus, there is no satisfactory explanation. If they are taken as Subjunctives of the tt-Perfect from denominatives of the First Conjugation, the -ar instead of -ir cannot be accounted for. It is more probable that they are Present Subjunctives of the Third Conjugation, from *kaispō, *krūstō, the -tar in place of -ter being due, possibly, to contamination with the type of U. ferar. Another suggestion is that they are from Presents in -atō or -ātō, in which case they belong to the same type as U. ferar.
- 239. A Passive and Deponent formation characterized by r is the common possession of the Italic and Celtic languages. This r is unquestionably to be connected with a series of Third Plural secondary endings containing r, which are preserved in Sanskrit (-ur, -ran, -ranta, etc.). But the precise starting-point and the various steps in the development are necessarily obscure. The following view seems most probable.¹

We start from an Active ending -r, parallel to the usual -nt, and a Middle ending -ro parallel to the usual -nto.

The forms in -r, though originally Plural and Active, came to be used only when the subject was indefinite, and in this way lost their specifically Plural force. Cf. Eng. 'they say' or 'one says', but Germ. 'man sagt', Fr. 'on dit', etc. From such a meaning it is but a step to an Impersonal Passive (cf. Eng. 'it is said'), and from that again to a fully developed Passive with definite subject; and this development would be assisted by the existence of other forms containing r which were based on a Middle ending and so had partly Passive force from the outset. In the O.-U. forms in -r the impersonal meaning prevails, there being only one form with subject expressed, namely O. esuf lamatir 'let him be beaten'(?). In O. Iúviass . . . sakriss sakrafír, avt últiumam kerssnaís 'the Ioviae are to be consecrated with sacrifices, but the last one with banquets', sakraffr has the Accusative construction which goes with the meaning 'let one consecrate', 'let there be consecration of'. O. loufir, U. ier, herifi, benuso, and couortuso are impersonal, while in the case of U. ferar, pihafei, and cehefi it is impossible to say whether the word or clause to which they refer is to be taken as Nominative or Accusative.

¹ I follow Thurneysen, K.Z. 37, 92 ff., in his explanation of forms in *-ter*, but for forms like U. *ferar* I still hold to what is substantially the view of Zimmer, K.Z. 30, 276 ff., and this without regard to the question of how far an Active impersonal use is actually to be recognized in the corresponding Celtic forms.

The forms in -ter sprang from a Third Plural in -ntro representing a contamination of the Middle endings -nto and -ro (cf. Skt. -ranta, a combination of the same elements in the reverse order). After this the Third Singular ending -to became -tro; and -tro, -ntro, became -ter, -nter, in the same way as U. ager, L. ager, from *agros (91, 2).

The forms in -tur, undoubtedly from -tor, are the most difficult, but perhaps originated in a combination of -nto with the simple -r, giving -ntor, whence the Singular -tor.

All the formations mentioned, though originating in secondary endings, came to be used in primary tenses as well. The distinction of primary -ter and secondary -tur is unoriginal and confined to Umbrian. In Latin, -tur prevailed in all tenses; in Oscan, -ter.

The Periphrastic Passive

240. In the Perfect System of the Passive, periphrastic forms are more common than the r-forms. Thus: Perf. Indic. O. teremnatust 'terminata est', prúftúset 'posita sunt', scriftas set 'scriptae sunt', U. screhto est 'scriptum est', screihtor sent, etc.; Perf. Subj. U. kuratu si 'curatum sit'; Fut. Perf. U. pihaz fust 'piatus erit', muieto fust 'muttitum erit', çersnatur furent 'cenati erunt', etc.; Perf. Infin. U. kuratu eru 'curatum esse', ehiato erom 'emissum esse'.

The Present Infinitive

241. For examples, see 205-209. The ending was -om, doubtless an Accusative form in origin, with change to -um in Oscan (50). In the First Conjugation -aum remained uncontracted, and in tríbarakavúm the v is simply a glide sound. See 83.

For the Perfect Infinitive Passive, see 240.

The Supine

- **242.** The one certain example of the Supine is U. anzeriatu, aseriato 'observatum', showing the same formation and use as the Latin Supine. On o for -u(m), see 57.
- a. U. aso VI b 50 is often regarded as a Supine, but is more probably a Perf. Pass. Partic. ("Let the same person carry it lighted on the right shoulder").

The Present Active Participle

- 243. The formation is the same as in Latin. Examples are: O. praesentid 'praesente' (178, 5, a), U. zeřef, serse 'sedens', U. restef, reste 'instaurans' (213, 4, a), U. kutef 'murmurans' (262, 2). For the -f, see 110, 4.
- a. The existence of an O. staief 'stans' is altogether doubtful, owing to the uncertainty of the reading and division of words (no. 29).

The Perfect Passive Participle

- 244. The formation is the same as in Latin.
- 1. -to-. O. scriftas 'scriptas', U. screihtor; U. sihitu 'cinctos'; O. statús 'stati'; O. prúftú 'posita' from *pro-fa-to- (fareduced grade of $f\bar{e}$ -, as in fak- beside $f\bar{e}k$ -); L. $pr\bar{o}$ -di-tus, con-di-tus, Grk. $\pi\rho\delta$ - $\theta\epsilon$ - τ os (see 223 with footnote); U. daetom 'delictum' (as if L. * $d\bar{e}$ -itum); O. ancensto 'incensa', censtom-en 'in censum', to censaum (211). For forms in -so- from roots ending in a dental, see 138; and for U. spefa etc., see 110, 3.
- a. O. ancensto, censtom-en, represent the normal formation, as compared with L. cēnsus which is one of the examples of the analogical extension of -so-. Similarly O. censtur: L. cēnsor (O. kenzsur, occurring once, is due to Latin influence).
- b. A probable example of the analogical -so- is *pelso-, assumed from U. pelsatu etc. See 262, 1, a. So also U. sepse, which may well mean 'sane' (sepse sarsite 'sane sarteque'), is perhaps an adverb formed from *saipso-: L. saeptus. Cf. L. lāpsus.
- c. U. aso 'arsum' (242, a) is commonly connected with L. assus, which seems to contain *asso- in place of *asto-. But it might also be connected with L. $\bar{a}rsus$, if the r of $\bar{a}rde\bar{o}$, $\bar{a}re\bar{o}$, were original and not from s, as is often assumed. That is, its s might stand in the same relation to the rf of U. trahuorfi (115, 3) as that of L. $r\bar{u}sum$ to the restored rs of $r\bar{u}rsum$, versus, etc. This of course is impossible if L. $\bar{a}re\bar{o}$ is connected with $\bar{a}ra$, O.-U. asa-, but the history of this whole class of words is obscure.
- 2. -āto-. O. teremnatust 'terminata est', staflatas 'statutae', ehpeílatas 'erectae'; U. pihaz, pihos 'piatus' (35, 137, 2), çersnatur 'cenati', anzeriates 'observatis', etc.
- a. O. deiuatuns 'iurati', if the n is not merely a mistake, must owe its form to the influence of agent-nouns in $-\bar{o}n$ -like L. $praed\bar{o}$, O. sverrunei (247, 2).

- 3. -īto-. U. purditom 'porrectum', heritu 'optato', stahmito 'statutum', persnis 'precatus' from *persnīt(o)s, etc. Like persnis in formation and use is U. uestis, uesteis 'libans', beside uesticatu etc. from an extended stem *uestikā-. Here belongs also U. sarsite 'sarte' (see above, 1, b), as if L. *sarcītus instead of sartus.
- 4. -eto- (see 36, 3, 88, 2). U. taçez, tases 'tacitus' (137, 2), uirseto 'visum', opeter 'lecti' (212, b), maletu 'molitum' (beside comatir 'commolitis' with -to-); further, in the First Conjugation, U. pruseçetu, oseto, etc. (211).
- a. U. comohota 'commota' probably belongs here, coming from *moueto-by syncope and change of ou to \bar{o} (72). L. $m\bar{o}tus$ also comes from *moueto-, but independently. For it is not to be separated from $v\bar{o}tus$ from *uoueto-, earlier * $uogh^u$ eto-, U. vufetės (152), in which, obviously, the process is specifically Latin.

The Gerundive

245. The forms correspond to the Latin, with the change of nd to nn (135). The origin of the formation is still unsettled. Examples: O. úpsannam 'faciendam', sakrannas 'sacrandae', eehiianasúm 'emittendarum'; — U. pihaner 'piandi', anferener 'circumferendi', pelsans 'sepeliendus'(?).

Note. The Oscan-Umbrian forms bear upon the much-disputed question of the origin of the Gerundive to this extent, that they are unfavorable to any theory which assumes that the original form contained ndh. For there are too serious difficulties, we think, in the way of assuming that the representation of an original sonant aspirate after a nasal by a simple sonant is not only Latin and Umbrian (161) but also Oscan, and so may belong to the Oscan-Umbrian or even the Italic period. See 161, a with footnote, and 264, 2 (O. aa-manaffed from Pres. *manf\(\overline{o}\)), not to mention O. Anafriss. Otherwise Fay, Trans. Am. Phil. Assoc. 29, pp. 15 ff.

WORD-FORMATION¹

DERIVATION OF NOUNS AND ADJECTIVES

NOUNS

- 246. 1. -tōr- in agent-nouns (L. victor). O. censtur 'censor', U. ařfertur '*adfertor, flamen', O. embratur 'imperator', O. Regaturei 'Rectori' (with -ā-tōr- after derivatives of ā-verbs). See 180, 1.
- a. Derivatives of agent-nouns are regularly formed from the reduced grade of the suffix (97), like L. victr-\(\bar{t}x\); e.g. U. kvestretie, uhtretie (251, 1), beside kvestur, uhtur, O. Fuutreí (180, a). Here belong the Oscan proper names Sadiriis 'Satrius' (81, 157, 2; cf. L. sator), Vestirikiíúí 'Vestricio' (81; cf. L. Vest\(\bar{v}ius\) with \(-t\bar{v}r\)-), Tintiriis '*Tintrius' (cf. L. Tint\(\bar{v}ius\) with \(-t\bar{v}r\)-; Tintirius is simply the Oscan form, like Pontius, Popidius, Calavius). But the later formation with \(-t\bar{v}r\)- (cf. L. \(am\bar{u}t\bar{v}ivis\), \(auct\bar{v}it\bar{u}s\)) is also represented, e.g. U. speturie '*spectoriae' beside Speture '*Spectori', O. Kenssurineis beside kenzsur 'censores'.
- 2. -ter- (-ter-,-tr-) in nouns of relationship (L. pater). O. patir 'pater', U. frater 'fratres'. See 180, 2.
- **247**. 1. $-i\bar{o}n$ -(-in-), $-ti\bar{o}n$ - $(-t\bar{i}n$ -), in abstracts denoting action, or, with a transfer to the concrete sense, the result of the action (L. $legi\bar{o}, \bar{a}cti\bar{o}$). O. tríbarakkiuf 'aedificium', tanginud 'sententia', fruktatiuf 'fructus', medicatinom 'iudicationem', U. natine 'natione'. See 181, with a.
- a. -ti-, of which -tiōn- is an extension, is seen in some words where the Latin has the extended form. Thus U. ahtim-em 'ad caerimonium'(?): L. āctiō; O. uhftis 'voluntates': L. optiō; U. -vakaz, -uacos, from *yakāt(i)s: L. vacā-tiō. Cf. also U. puntes 'pentads' from *pomp-ti- (146, 153); U. spanti 'latus' from *span-ti (root span-, Eng. span, Germ. spannen, related to spā- in U. spahatu (110, 3, a).

¹ That is, the formation of the word as a whole, irrespective of inflectional variations. Some matters which belong strictly under this head, such as the formation of adverbs, of the comparative and superlative, etc., have been treated, for greater convenience, in connection with Inflection. There remain, then, Derivation of Nouns and Adjectives by means of suffixes, Secondary Verbal Derivation, and Composition. No attempt is made to present the material in full, but examples are given of all the more important formations.

- 2. $-\bar{o}n$ in agent-nouns (L. $praed\bar{o}$). O. sverrunei 'spokesman' (? see note to C. A. 2; cf. L. $susurr\bar{o}$); U. $mar\bar{o}n$ -, name of an official (see note to no. 84). For other nouns in $-\bar{o}n$ -, see 181, b.
- a. $-\bar{o}n\bar{a}$ -, probably an extension of $-\bar{o}n$ -, and frequent in names of divinities (L. $Bell\bar{o}na$), is seen in U. Vesune. In the parallel names of male divinities, U. Ařmune, Puemune, Uofione, all Dat. Sg., it is not clear whether the suffix is $-\bar{o}no$ or simply $-\bar{o}n$ -.
- 3. -men-(-mn-) in nouns denoting action or result of the action (L. fragmen). U. nome 'nomen'; O. teremniss 'terminibus' (but U. termnom-e etc., like L. terminus beside termen); U. tikamne 'dedicatione' (from dikā-; cf. L. certāmen etc.). The extended form -mento- is seen in O. tristaamentud 'testamento'. But U. pelmner: L. pulmentum.
- **248.** -lo-, -elo-, -flo-, -klo-, -tro-, in nouns denoting means or instrument, or sometimes place or result.
- 1. -lo-,-elo-(L.vinculum). U. *uislo- (preuislatu '*praevinculato') from *uinkelo-;—U. tiçel 'dedicatio', Acc. Sg. tiçlu, from *dikelo-. See 88, 4, 144.
- 2. -flo- (L. $p\bar{a}bulum$; orig. -dhlo-, Grk. - $\theta\lambda$ o-). A *staflo-(L. stabulum) is implied by O. staflatas 'statutae', U. staflarem '*stabularem', Pael. pristafalacirix '*praestibulatrix'. Cf. the adjective suffix -fli- (261, 1).
- 3. -klo-, -klā- (L. piāculum; orig. -tlo-, Grk. -τλο-; see 129, 2). O. sakaraklúm 'templum', U. pihaclu 'piaculo', U. naraklum 'narratio'; U. kumnahkle 'in conventu', from *komno- (U. kumne, O. comono), either directly, after the analogy of other forms in -āklo-, or through a denominative verb-stem *komnā-; U. ehvelklu 'sententiam' from *µeleklo- (ehueltu, veltu; cf. L. vehiculum); —U. muneklu 'sportulam' from *moinī-klo- (cf. L. perīculum), containing a denominative verb-stem *moinī- (cf. L. mūnia, commūnis, O. múiní-kú); (Masc.) O. puklum 'puerum', Pael. puclois (Skt. putrá-); U. fikla 'offam' from *fig-klā (L. fingō). For O. pestlúm 'templum' with -tlo- preserved, and U. persclo, belonging probably under 1, see 129, 2.
- *a. Is U. aviekla, auiecla 'augurali' simply an adjective form of a noun *auiē-klo-, formed from a denominative verb-stem *auiē- (cf. U. auie 'augurio')?

We should expect an additional adjectival suffix, as in L. perīculōsus, piāculāris, etc. But on the other hand, a diminutive form *auiēkelo-, whether with -kelo-, or from an *auiēko- (cf. U. aviekate), would give U. *avieçla. Cf. U. arçlataf and struhçla, 249, 1, 2, and 144.

- 4. -tro-, -trā- (L. arātrum). U. krematru '*crematra' (L. cremō); cringatro 'cinctum' (39, 3); kletram 'lecticam' (L. clī-nō, clī-tellae, etc.).
- a. A transfer to the u-Declension is seen in O. castrous, U. castruo, etc.: L. castrum.
 - 249. -lo-, -elo-, -kelo-, in diminutives.
- 1. -lo-, -elo- (L. porculus). U. Funtler-e, Fondlir-e 'in *Fontulis' from *fontelo- (L. fōns); U. arçlataf 'arculatas', derived from *arkelo- (L. arcus, arculus; see 154); O. iúkleí probably 'formula of consecration, consecration' from *iokelo- (L. iocus, U. iuka 'preces').¹
- 2. -kelo- (L. ōsculum). O. ziculud 'die', Acc. Pl. d]iíkúlús (cf. L. diēcula); U. veskla 'vascula', struhçla '*struiculam'. See 88, 4, 144.
- **250.** -io- (-i-), $-i\bar{a}$ -. For the inflection of the Neuters in -io-, see 172, 173, 1, 5.
- 1. In primary derivatives (L. studium, furia). O. kúmbennieis 'conventus'; O. memnim 'monumentum' from *me-men-jo-; U. ařkani 'cantum'; O. heriam 'arbitrium, vim'.
- 2. In secondary derivatives (L. magisterium, familia). O. medicim 'magistracy', Abl. Sg. meddixud (100, 3, c), and meddikkiai 'in the meddixship', both derived from meddik- 'magistrate, meddix', the suffix having here the same force as L. -ātus in iūdicātus, magistrātus (L. iūdicium, vindicia, are primary derivatives from iūdicō, vindicō); O. famelo 'familia' from *fameliā (100, 3, c), derived from *famelo- (O. famel, L. famulus); O. Víteliú 'Italia' (also Vítelliú, 162, 1) from * Ļiteliā,² probably derived from *uitelo- (U. vitlu, L. vitulus); here also probably O. prupukid 'by previous agreement' (173, 5).

 $^{^1}$ The derivation from a *diyo-kelo-'day', though attractive on the side of meaning, is on the whole less likely.

² From some such form was borrowed the Grk. $^{\prime}1\tau\alpha\lambda\prime\alpha$, which became the source of L. *Italia*.

- **251.** 1. -itiā- (L. $d\bar{u}ritia$). U. kvestretie 'in quaestura', uhtretie 'in *auctura', beside kvestur, uhtur (see 246, 1, a).
- a. That these are Locatives of the First Declension and not Ablatives of the Fifth with the suffix -iti \bar{e} (L. $d\bar{u}riti\bar{e}s$), is shown by the form of the adjective agreeing with kvestretie.
- 2. -no-, -nā- (L. dōnum, $urn\bar{a}$). O. dunum, U. dunu 'donum'; U. tremnu 'tabernaculo' from *treb-no- (125, 1); O. fíísnú 'fanum', U. fesnaf-e, from * $f\bar{e}s$ -nā- (99, 1). O. comono 'comitium', U. kumne, and O. amnúd 'circuitu', amnud 'causa', are formed from the prepositional adverbs kom and am, like L. $tr\bar{a}nstrum$ from $tr\bar{a}ns$. For -no- in adjectives, see 255.
- a. -snā- is to be assumed for O. kersnu 'cena', U. sesna, etc. See 116, 2. -ni- is seen in U. poni 'posca' ($p\bar{o}$ -ni-).
- 3. -mo-, -mā- (L. armus, spūma). O. *tormo-, whence turumiiad 'torqueatur', from *torku-mo-(146); O. egmo 'res' (L. egeō?); U. arsmor 'ritus,' whence also arsmatiam 'ritualem', arsmahamo 'ordamini', without any certain cognates, but probably coming from *ad-mo-, with a root ad- used of 'orderly arrangement'. For -mo- in adjectives, see 189.
- 4. -uriā-, -eriā-, in derivatives of numerals. U. tekuries, dequrier 'decuriis' (191, 10); O. púmperiais '*quincuriis' (in U. pumpeřias the ř is probably an error).
- 5. $-t\bar{a}t(i)$ (L. $bonit\bar{a}s$). O. Herentate's 'Veneris' (Pael. Herentas; cf. also 'E $\rho\iota\acute{e}\nu\tau\eta$ s 'A $\phi\rhoo\delta\iota\acute{\tau}\eta$ s $\acute{e}\pi\acute{\omega}\nu\nu\mu\sigma\nu$. Hesychius) from * $herenti-t\bar{a}t(i)$ by haplology, like L. $volunt\bar{a}s$ from * $uolonti-t\bar{a}t(i)$ -.
- 6. -tu- (L. cantus). U. Ahtu '*Actui'; U. ařputrati 'arbitratu' with -ātu-, like L. cōnsulātus etc., but with this force more commonly -io- (250, 2) or -āto- (259, 2).

ADJECTIVES 1

252. 1. -io-, -ijo- (L. patrius). This is especially common in praenomina and gentiles, for which see 174-176; also in derivatives of names of divinities, as O. Mamerttiais 'Martiis', O. Iúviia

 $^{^{\}rm 1}$ Including many substantives of obviously adjectival origin.

- 'Ioviam', U. Iuvie, U. Çerfie beside Çerfe, O. Fiísíais, U. Fisier, etc., beside U. Fiso.
- a. Many of these are used as epithets of other divinities, as in U. Prestate Çerfie, Tefre Iuvie, etc. (cf. L. Hercules Iovius, Venus Iovius, etc.). They sometimes stand alone as independent names, e.g. U. Iuvie (II a 6, 8), Saçi (II b 10).
- 2. -eo- (L. aureus) from -eio-. U. fasiu, farsio 'farrea' (i from e, 39, 1).
 - 253. *-aijo-, -eijo-, -ēijo-. See 61, 3.
- 1. -aijo-. O. kersnaiias '*cenariae'; U. pernaiaf 'anticas', pustnaiaf 'posticas', from perne 'ante', postne 'pone'; peřaia, persaia 'humi stratas'(?) from peřum, perso 'fossam'; in names of persons, O. Tantrnnaiúm, Vesulliais (176, 3), Maraies, Gen. Sg. Maraileís (176, 4); extended by the suffix -āno-, O. Púmpaiians 'Pompeianus', O. Búvaianúd 'in Boviano'.
- a. Like $Vei\bar{\imath}$ etc., $Pompei\bar{\imath}$ was named from a gens, in this case the *Púmpaiius (derived from *pompe 'quinque'; cf. $Quinti\bar{\imath}$).
- 2. -eijo-. O. vereiiai 'iuventuti', Gen. Sg. vereias, verehias (? reading uncertain) from *uero- 'defense' (see note to no. 4); U. Teteies 'Tetteius'(?). It is doubtful whether U. deueia 'divinam' belongs here, though if it contains the simple -io- suffix (252, 1), like O. Diíviiai, the spelling ei in both occurrences is remarkable.
 - 3. -ēijo- (L. plebēius). O. Kerriiai 'Cereali', Kerriiuis, etc.
- Note. The suffixes $-ai\dot{\varrho}o_{-}$, $-ci\dot{\varrho}o_{-}$, and $-\bar{e}i\dot{\varrho}o_{-}$ probably originated in the addition of the suffix $-\dot{\varrho}o_{-}$ to the Loc. Sg. of \bar{u}_{-} , o_{-} , and \bar{e}_{-} stems. With $-ai\dot{\varrho}o_{-}$ is to be compared Grk. -aios ($\delta i\kappa aios$); and Grk. -eios ($\delta i\kappa e\hat{\iota}os$), though coming from various sources, corresponds in part to $-ei\dot{\varrho}o_{-}$. Similarly O. púiiu 'cuia', L. quoius, cuius, are, like Grk. $\pio\hat{\iota}os$, from $*quoi-io_{-}$.
- 254. -āsio- (L. ōrdinārius). O. purasiaí 'in igniaria', degetasis '*decentarius'; frequent in substantive use, denoting certain ceremonies, as O. Fiuusasiaís 'Floralibus', kerssnasias '*cenariae', sakrasias '*sacrariae', U. plenasier urnasier '*plenariis *urnariis', etc.; with an added -iko-, O. múltasíkad 'multaticia'. For the retention of s in Umbrian, and for U. ezariaf 'escas'(?), see 112, a.

Note. It is not unlikely that this suffix originated in the addition of the suffix -io- to the Gen. Sg. of \bar{a} -stems.

- 255. 1. -no- in primary derivatives. U. plener 'plenis'; O. sullus 'omnes', sullum, etc. (L. soll-emnis etc.; cf. also Pael. solois 'omnibus'), probably from *solno-1. For -no-, -nā- in nouns, see 251, 2.
- 2. -ni- in primary derivatives. U. fons 'favens', Nom. Pl. foner, etc. (cf. L. Fōnēs beside Faunus).
 - 3. -no- in secondary derivatives. U. ahesnes 'ahenis'.
- 4. -āno- (L. Rōmānus). O. Abellanús 'Abellani', U. Treblanir 'Trebulanis', etc.; with added -io-, O. Dekmanniúís, name of a festival.
- a. O. amvianud 'detour' would seem to be a derivative in -āno-, used substantively, were it not for the spelling amviannud, which occurs twice, and is probably the more correct (n for nn can be paralleled, but not nn for n; see 162, 163). The form looks like a Gerundive used substantively, as if L. *amviandum, and meaning a 'circuitous route'. But there is apparently nothing like this in Latin.
- 5. - $\bar{\imath}no$ (L. $d\bar{\imath}v\bar{\imath}nus$). O. deivinais 'divinis', Bantins 'Bantinus', $Ma\mu\epsilon\rho\tau\iota\nu o$ 'Mamertina'; U. cabriner 'caprini', Ikuvins 'Iguvinus', etc.
- 6. $-\bar{o}no$ -. U. esono- 'sacer' is possibly from *ais(e)s- $\bar{o}no$ (112, a), though there is little support in Italic for such an adjective-suffix. The noun-suffix $-\bar{o}no$ -, $-\bar{o}n\bar{a}$ -, originated in an extension of $-\bar{o}n$ (247, 2, a).
- **256.** 1. -ko- in names of peoples (L. Opscī, Oscī, Faliscī, etc.). U. Turskum, Tuscom 'Tuscum'; U. Iapuzkum, Iapusco '*Iapudicum' from *Iapud(i)sko- (cf. Iapydes, 'Iá $\pi v\delta \epsilon$ s, name of an Illyrian people); U. Naharkum, Naharcom '*Narcum' (cf. L. Nār, Nahartēs, Nārtēs).²
- 2. -iko- (L. bellicus). O. túvtíks 'publicus', toutico; U. totcor, etc.; O. múíníkú 'communis', muinikam, etc.; U. fratreks, fratrexs '*fratricus, magister fratrum'.
- 3. -ikio- (L. patricius). O. serevkid 'auspicio' probably from *seruikio- (173, 5); O. Kastríkiíeís 'Castricii'; with syncope O. Iúvkiíúí '*Iovicio'.

 $^{^1}$ Some derive from $*solyo_$, but the change of $l \not\!\! u$ to ll is one which we do not accept.

² The uniform spelling with h in both alphabets shows that the h is not merely a sign of vowel-length, and that L. $N\bar{a}r$ is from *Nahar, like $c\bar{o}rs$ from cohors.

- 4. -*īkio* (L. nov*īcius*, but otherwise rare except in the type -*tīcius*). O. Vestirikiíúí 'Vestricio', Viínikiís 'Vinicius' (-*īkio* rather than -*ikio* is assumed here on account of the spelling with i, not i).
- 5. -ukio- (or $-\bar{u}kio$ -?). U. Kastruçiie (cf. O. castrous, U. castruo, from kastru-) in contrast to O. Kastrıkiieis.
- 6. $-\bar{a}k$ (L. $aud\bar{a}x$). O. malaks 'malevolos'(?); U. huntak 'puteum'(?), probably Acc. Sg. N. of *hondāk- meaning 'underground' (cf. hondra 'infra') and used substantively of a 'well'; U. curnaco 'cornicem', curnase: L. $corn\bar{\imath}x$ with $-\bar{\imath}k$ -.
- 7. $-\bar{a}ko$ (L. $mer\bar{a}cus$; cf. also Celtic names like $Teutobodi\bar{a}c\bar{\imath}$ etc.). U. Tesenakes, Tesenocir (see 35, a).
- 8. -k-. O. Vezkei is most easily derived from * **Qetes-k- or * **Qetes-k- with -k- beside -ko- in L. vetuscus, yet the connection with the latter word must be regarded as wholly uncertain.
- 257. 1. -ro- in primary derivatives. O.-U. sakro- 'sacer' (O. σακορο, U. sacra, etc.); U. rufra 'rubra'; U. vufru 'votivum' (μοf-; cf. vufetes 'votis').
- 2. -ri- in primary derivatives. O.-U. sakri- beside sakro- (see 187, 2); U. pacer 'propitius', Nom. Pl. pacer ($p\bar{a}k$ -; cf. L. $p\bar{a}x$ etc.); O. akrid (99, 3); U. ocrer (99, 3; for ocar see 91, b).
 - 3. For -ero-, -tero-, see 188, 2.
- 4. -āli-, -āri-, in secondary derivatives (L. rēgālis, populāris). O. fertalis '(ceremonies) celebrated with sacrificial cakes' (L. fertum); O. luisarifs (see 138, and note to no. 21); O. Dekkviarím 'Decurialem'; U. furu sehmeniar 'forum seminarium' (cf. forum piscārium etc.). Cf. also U. disleralinsust, 262, 3.
- 5. -īlo- (cf. L. -īli- in hostīlis etc.). O. iuvilu '*iovila', diuvilam, iúvilam, etc., is probably an adjective form used substantively, from *diouīlo-, a derivative of Diou- (O. Diúveí etc.). Cf. L. Iūlus, Iūlius, from *Iouilo-, Iouilio-; and Iuilius (inser.), which is perhaps Iuīlius.
- 258. 1. -uo- in primary derivatives. O. salavs 'salvus' (80, 1), U. saluom 'salvum', etc.; O. siuom 'omnino', U. seuom 'totum', etc., from *sē-uo- (15, 12); U. çive 'citra' (189, 1, a, 190, 1); —

with participal force, O. facus 'factus', praefucus 'praefectus', from *fak-uo- (cf. L. mortuus etc.).

- 2. -uo- in secondary derivatives. U. mersuva 'iusta' from *medes-uo (132, a); U. tesvam, dersua 'prosperam' probably from *dedes-uo- (132, b); U. felsva 'holera'(?) from *feles-uo- (L. holus? see 149, b).
- 3. -uio-, an extension of -uo-, in proper names. O. Salaviis, Kalaviis, Heleviieis, for which see also 80, 1;—O. Akviiai, U. Piquier.
- 4. -ouio- in proper names. O. Kaluvis, Gen. Sg. Kalúvieis; U. Fisouie, Grabouie. U. Ikuvinus, Iiovinur, etc. also implies an *Igouio-: L. Iguvium. Cf. Mars. Cantouios, and Vitrovius, Sallovius, etc., which occur in Latin inscriptions but are dialectic, the regular Latin forms being Vitruvius, Salluvius, etc.

Note. -ouio- is an extension of -ouo-, earlier -euo-, as -uio- is of -uo-. For -euo- beside -uo-, cf. Ion. $\kappa\epsilon\nu\epsilon\delta$ s from * $\kappa\epsilon\nu\epsilon\rho\delta$ s and $\kappa\epsilon\nu\delta$ s from * $\kappa\epsilon\nu\rho\delta$ s. In Latin the two forms of the suffix become identical.¹

- **259.** 1. -to-, the suffix of the Perf. Pass. Partic. (244), is also used, as in Latin ($barb\bar{a}tus$), to form adjectives directly from noun-stems. U. hostatu 'hastatos', mersto 'iustum' (88, 3), petenata 'pectinatam, comb-shaped', etc.; U. ponisiater, puniçate, name of an official, perhaps named from a purple costume (* $poiniki-\bar{a}to-$: L. $p\bar{u}nicus$). Cf. also proper names from participles or adjectives in -to-, as O. Minaz, Pukalatúí (* $pukl\bar{a}to-$ from puklo-'puer', O. puklum etc.), Kluvatiis, Betitis, etc.
- 2. -āto- is used in substantives denoting office or official body, like L. -ātu-. O. senateis 'senatus' (cf. also L. senātī); U. fratrecate (Loc. Sg.) 'office of fratrex'; U. maronatei (Loc. Sg.) 'office of maro' (see note to no. 84), maronato (Abl. Sg.; see 302).
- 3. -āti- in derivatives of names of towns (L. $Arp\bar{\imath}n\bar{a}s$). O. Saipinaz 'Saepinas, of Saepinum', Lúvkanateís '*Lucanatis';—

¹ For the material see especially Solmsen, Studien zur lat. Lautgeschichte, pp. 135 ff., who, however, goes too far in assuming that all such forms as are cited above in 1, 2, and 3 contain -eyo-, not -yo-. See author's Verb-System, p. 175.

- U. Tařinate, Tarsinatem 'Tadinatem, of Tadinum'; used substantively as names of gentes, U. Atiieřiate, Kaselate, Casilate, Talenate, etc. (II b 1-7).
- 260. 1. -do-. U. kaleřuf, calersu 'with a white forehead' (cf. L. cal(l)idus, Isidorus, Orig. 12, 1, 52), like L. pallidus etc.; probably U. sorser 'suilli', sorsalem 'suillam' (see 57).
- 2. -idio-, -edio-, in proper names (L. Calidius). O. Húsidiis, Púpidiis, Caisidis, Pael. Apidis; also with syncope O. Pupdiis, Pael. Popdis; with added -īno-, O. Tafidins; U. Coredier, Kureties (Pael. Uibedis); U. Atiersiur, Atiieřiur (but L. Attidium), Pael. Ouiedis. The reason for O. i (not í) and, in general, the relation of the different forms are obscure.
- 261. -fli- (L. amābilis; orig. -dhli-, the adjective i-stem form of -dhlo-, 248, 2). U. façefele (aes façefete) '*facibile, *sacrificabile', purtifele '*porricibilem'. Since anaptyxis is unknown in Umbrian the first e in -fele is surprising. Possibly it is due to the Nom. Sg., in which -fel from -flis would be regular (cf. pacer from *pakris 91, 2).

SECONDARY VERBAL DERIVATION

DENOMINATIVES

262. 1. As in Latin, the great mass of denominatives, whether or not derived from ā-stems, follow the First Conjugation. Examples: U. kuraia 'curet', kuratu (Pael. coisatens) from *koisā (L. cāra); — O. moltaum 'multare' from *molktā (O. molto, L. multa); — O. ehpeilatas 'erectae, set up' from *peilā: L. pīla; — O. deiuaid 'iuret', deiuast, deiuatud, etc. from *deiuo- (L. deus; see 16, 4); — U. stakaz 'statutus' from *stāko- (cf. L. stāgnum); — U. pihatu 'piato', pihos, etc. from adj. *pīo- (L. pius); — O. prúfatted 'probavit' from adj. *profo- (L. probus); — O. teremnattens 'terminaverunt' from *termen- (O. teremniss, L. termen); — U. vepuratu 'restinguito'(?) from adj. ue-pur- 'fireless' (U. vepurus, 263, 2); — O. úpsannam 'operandam, faciendam', U. osatu, etc. from *opes- (L. opus); — U. tuderato 'finitum' from *tudes- (U. tuder);

— U. etuřstamu, eturstahmu 'exterminato' from *tudes-to- (cf. L. modes-tus).

There are also examples of the formation from the to-Participle, corresponding to the Latin iteratives. Thus U. etaians 'itent', etato, etc. from *ei-to-, not from *i-to- like L. itō; — U. statitatu 'statuito' from statīto- (U. statita, see below, 3); — U. frosetom 'fraudatum' from *frausso- (L. frausus) as if L. *frausō; — U. preplotatu of uncertain meaning, but perhaps '*praeplauditato, strike down' from *plaudeto-.

- a. U. pelsatu, pelsans, etc. is probably derived from a Partic. *pelso-, like L. pulsō from pulsus, though its etymological connection is uncertain. The meaning 'bury' (in the trench; cf. VI b 40) seems the most probable among various suggestions, and the connection with L. sepeliō may be maintained if we take the latter as se-peliō (for se- beside sē- cf. solvō from *se-luō, socors from *se-cors). In this case *pelso- will be *pel-so- for *pel-to- with the same analogical -so- as in L. pulsus etc. (see also 244, 1, a, b).
- 2. Denominatives of the Second Conjugation are: O. turumiiad 'torqueatur' from *tormo- (cf. L. tormentum); O. fatíum 'fari' like L. fateor from Partic. *fato- (φατός), which was replaced in Latin by fāto-; U. kutef 'speaking low' (kutef pesnimu equivalent to the more common taçez pesnimu 'tacitus precator') probably as if L. *cauteō (*cautēns) from cautus; O. pútíad, putiiad 'possit', as if L. *poteō (cf. potēns, potuī), from poti- (L. potis).
- 3. Denominatives of the Fourth Conjugation are: U. persnihimu 'precator', persnis, etc. from *persni-, *persk-ni- (146) (cf. Skt. prag-ná- from the same root, whence denom. pragnayāmi)¹; U. statita 'statuta' from *sta-ti- (Grk. στάσις); U. stahmito 'statutum', stahmeitei, from the stem of U. stahmei 'statui' (*stā-mo- or *stā-mi-); O. sakruvit 'sacrat', sakrvist, from *sakru-(214, 3); U. disleralinsust 'inritum fecerit' from an adjective *dis-leisāli- 'off the track' (L. līra, Germ. Geleise) and so 'wrong, void'.

¹ The assumption of a primary verb with a $n\bar{\imath}$ -suffix, a type of which there are no other relics in Italic, is altogether less probable.

COMPOSITION

Nouns and Adjectives

- 263. 1. The first element is a noun or adjective stem (L. armi-ger). O. meddiss, meddis 'meddix', Gen. Sg. medikeis, etc., from *medos (U. meřs 'ius') and dik-,1 precisely like L. iūdex from iūs and dik-; — Líganak-díkeí, name of a goddess, the first part being a derivative related to L. $l\bar{e}x$ (80, 2; cf. $\Theta\epsilon\sigma\mu$ o ϕ o ρ o ρ s an epithet of Demeter); — U. man-trahklu, man-draclo 'mantele' (97); — U. tu-plak (192, 1); — U. du-pursus 'bipedibus', petur-pursus 'quadrupedibus' (94, 191, 2, a, 4, a); — U. di-fue 'bifidum' (191, 2, a); — U. nur-pener '---pondiis', name of a small coin, the first part being obscure, while the second is from *pendo- (cf. L. du-pondius; 94); — U. seu-acni- (159, a). O. tribarakkiuf 'aedificatio' and the verb tribarakavúm are probably derivatives of a *trēbarkor *trēbarkio-, compounded of *trēbo- or *trēb- (O. trííbúm 'domum'; see 171, 14) and *ark- (L. arx, arceō), and so meaning first 'the closing in, i.e. the construction of, a building', then simply 'building', like L. aedificatio.
- a. U. seuacni-, peracni-, exemplify the same shifting to the i-stem form that is seen in L. inermis, biiugis, etc.
- 2. The first element is an adverbial prefix. Most of these prefixes are the same which are used in the composition of verbs (264, 1), and occur separately as prepositions, e.g. O. kúm-bennieís 'conventus'. For examples, see 299-302. But the following occur only in noun and adjective (including participial) compounds.

The negative an- (L. in-; see 98), corresponding to L. in-, in O. an-censto 'non censa', am-prufid 'improbe', amiricatud '*immercato'; U. an-hostatu 'non hastatos', an-takres 'integris', aanfehtaf 'infectas' (73, a), ansihitu 'non cinctos', auirseto 'non visum', asnata 'non umecta', aseçeta 'non secta' (n omitted in last two examples by 108, 1; for auirseto from an-y- cf. U. co-uertu etc. (300, 2).

U. sei- (L. $s\bar{e}d$ -, $s\bar{e}$ -) in sei-podruhpei 'seorsum utroque' (200, 2).

¹ O. meddiss may be from *medes-dik- through *medsdik-, s being lost between two mutes, or from *medo-dik- with the not infrequent substitution of the o-stem for the s-stem form.

- U. ven- in ven-persuntra, vem-pesuntres, ve-pesutra 'ficticia' (?) beside per-sontro- 'figmentum' (?) is evidently connected with L. $v\bar{e}$ -, but with a nasal, perhaps representing an added particle ne, and without distinctly negative force. Another probable example of this prefix is U. vepurus, which is best explained as 'fireless' (cf. U. pir, pure-to, etc.), esunes-ku vepurus meaning 'at the sacrifices without fire' (cf. Grk. $l\epsilon\rho\dot{\alpha}$ $d\pi\nu\rho\alpha$).
- 3. Juxtaposition (L. senātusconsultum). U. Iupater, like L. $I\bar{u}piter$ from Voc. Sg. * $D\underline{i}eu$ -pater ($Z\epsilon\hat{v}$ $\pi\acute{a}\tau\epsilon\rho$); U. desen-duf 'duodecim'.
- a. The juxtaposition of prepositions and adverbs of time and place, as in L. ab-hinc, inter-ibi, etc., is exemplified by U. ap-ehtre 'ab extra, extrinsecus'. For other examples of compound adverbs see 202, passim.

VERBS

- **264.** 1. The only extensive type of verbal composition is that in which the first element is an adverbial prefix. Most of these prefixes are such as occur separately as prepositions, and examples will be given in connection with the latter (299-302). Those not occurring separately are:
- (L. \bar{a} , ab). O. aa-manaffed 'mandavit, locavit', U. aha-uendu 'avertito', aha-tripursatu, a-tripursatu, ah-trepuřatu, a-trepuřatu 'tripodato'. See 77, 2. The-preposition with a case-form does not happen to occur. But cf. U. ap-ehtre 'ab extra, extrinsecus' (263, 3, a).
- (L. amb-, am-). For am- and *amfer-, for which, however, there is a related preposition, O. ampt (300, 1), see 161 with a.
- (L. an- in an-hēlō). U. an-tentu, an-dendu, with the same meaning as en-tentu, en-dendu 'intendito', am-pentu, a-pentu 'impendito', an-ouihimu 'induitor', an-zeriatu, an-seriato 'observatum', α-seriatu, etc., an-stintu, a-stintu 'distinguito', an-stiplatu 'stipulator', am-paritu 'conlocato', am-parihmu 'surgito' (in the last four examples connection with L. am-, amb-, is possible, but less likely); O. avafaκετ 'dedicavit' (80, 2), probably an-getuzet 'proposuerint' (228, α). Cf. also U. ancla, anglaf 'oscines' (155).
 - (L. dis-). U. disleralinsust. See 262, 3.
- (L. por-). U. pur-douitu, pur-tuvitu 'porricito', pur-dinsiust, pur-ditom, etc. See 51.
 - (L. re-). U. re-vestu 'revisito', re-statu 'instaurato', re-stef, etc.
 - O. ce-bnust 'venerit' contains the particle seen in L. ce-do, ce-tte.

¹ So occasionally in Latin. See I.F. 10, 248 ff.

2. Juxtaposition. A probable parallel to L. animadvertō is U. eitipes 'decreverunt' from *eitom *hipens (see 84), used like L. 'ratum habuerunt'. For *hipens, i.e. *hēpens, cf. O. hipid etc. (218).

The first part is perhaps from *aiketo- with the same root as Skt. $\bar{\imath}$ ç- 'have power', Eng. own, etc. (cf. also O. aikdafed, 264, 3), the phonetic development being *aikto-, * $\bar{\imath}$ ekto-, *eito- (143).

O. manafum 'mandavi', aa-manaffed 'mandavit, locavit', from *manfefom, *manfefed (80, 2, 223), belong to a Pres. *manf \bar{o} , earlier *mandh \bar{o} , whence also L. man-d \bar{o} , which was originally inflected like $abd\bar{o}$, $cond\bar{o}$, etc., but passed over to the First Conjugation (thus avoiding confusion with $mand\bar{o}$ 'chew').

This *man-dhō is formed after *con-dhō (L. condō) etc. from man-, seen in U. manf 'manus' (Acc. Pl.), L. man-ceps, etc. (If it is viewed thus as an analogical formation, it is not necessary to assume a case-form in man-.)

A parallel formation is probably U. hondu 'pessumdato'(?), belonging to a Pres. * $hond\bar{o}$, this from * $hon-f\bar{o}$, * $hom-dh\bar{o}$, hom- being the same element that is seen in U. hondra 'infra' etc. (L. humus). The phonetic development is the same as in U. -uendu (161).

3. O. tríbarakavúm 'aedificare' is probably, like L. $aedific\bar{o}$, a derivative of a noun already compounded. See 263, 1. Of O. aíkdafed the most probable explanation is that it means 'decrevit, authorized' and is derived from *aik-do-, the first part belonging to the root aik- seen in Skt. $\bar{i}c$ - 'have power' etc. (cf. also U. eitipes, 264, 2).

SYNTAX 1

USES OF THE CASES

THE GENITIVE

265. The Possessive Genitive in the various phases of possession and connection is common. Thus O. sakaraklúm Herekleis 'templum Herculis'; predicative O. Herentateis súm 'Veneris sum';—O. L. Pettieis meddikiaí 'in the meddixship of L. Pettius';—O. senateis tanginud 'senatus sententia';—U. farer agre Tlatie 'farris agri Latii';—U. popluper totar Iiouinar 'pro populo civitatis Iguvinae'; predicative U. pisest totar Tarsinater 'quisquis est civitatis Tadinati'.

The Objective Genitive. U. katle tiçel 'catuli dedicatio';—
arsier frite 'sancti fiducia, with confidence in (thee) the holy one'.

266. The Partitive Genitive. U. mestru karu fratru 'maior pars fratrum'; — O. minstreis aeteis eituas 'minoris partis pecuniae'; — O. idic tangineis 'id sententiae', like L. id temporis etc.

The following are bolder than anything in Latin, but may be paralleled elsewhere. U. iuenga peracrio tursituto 'iuvencas ex opimis fuganto' (VII a 51); — U. struhçlas fiklas sufafias kumaltu 'prepare some sacrificial cake, etc.' (II a 41).

The use of the Partitive Genitive as subject, which is found in Avestan, Lithuanian, and rarely in Greek, is probably to be recognized in U. eru emantur herte '(whether) any of them are to be accepted' (V a 8).

² These last two examples belong to the class in which it is impossible to draw

the line between the Possessive and the Partitive Genitive.

¹ The treatment of the Syntax is brief, not through any intention to slight this side of the grammar, but because the syntactical material is relatively meagre. That is, owing to the nature of the remains only a limited number of constructions are met with. Moreover, in view of the general similarity to Latin syntax, it is needless to heap up examples of the common constructions, and some matters, such as the uses of the parts of speech, etc., may be passed over entirely.

- 267. Genitive with Adjectives. O. diuvilam Tirentium Magiium sulum muinikam iovilam Terentiorum Magiorum omnium communem.
- 268. Genitive of Time. This Genitive, which is found in Greek and elsewhere (νυκτός 'by night', τριῶν μηνῶν 'within three months', etc.), and which is a natural development of the Possessive Genitive (the time to which an action belongs), is to be recognized in O. eisucen ziculud zicolom XXX nesimum comonom ni hipid 'shall not hold the comitia within the next thirty days from that day' (T. B. 17). Cf. L. in diebus V proxsumeis in the Latin inscription of the Tabula Bantina.

NOTE. The zicolom is often taken as an Acc. Sg., as if 'from that day until the thirtieth day following', but there are serious objections to this, namely 1) the use of the Accusative without a preposition, 2) the use of the numeral signs for the ordinal, 3) the use of nesimum 'proximum' in such a phrase, as if L. ad diem tricensimum proximum.

269. Genitive of the Penalty. O. ampert minstreis aeteis eituas moltas moltaum licitud 'dumtaxat minoris partis pecuniae multae multare liceto' (T. B. 12, 13), and moltaum licitud, ampert mistreis aeteis eituas licitud 'multare liceto, dumtaxat minoris partis pecuniae liceto' (T. B. 18). That is, 'one may fine with (a fine of) not more than half the property'.

In the former passage aeteis may be the Genitive of the Penalty with moltas in apposition, or it may be taken as an explanatory Genitive with moltas, this last being the Genitive of the Penalty. The preceding ampert, literally $n\bar{o}n$ $tr\bar{a}ns$, is not a preposition (in this case, we should expect the Acc.), but an adverb used without effect on the case-construction, just as, frequently, L. $pl\bar{u}s$, minus, amplius. Similarly in the corresponding Latin phrase [dum minoris] partus familias taxsat (T. B. Latin side), partus is Genitive of the Penalty, and not governed by taxsat.

a. A noteworthy construction, perhaps containing a sort of detached Genitive of the Penalty, is seen in U. fratreci motar sins a. CCC 'magistro multae sint asses CCC' (VII b 4), which is paralleled by L. Iovei bovid piaclum datod et a. CCC moltai suntod (CIL. XI, 4766), where moltai must be Gen. Sg. and not Nom. Pl., as is shown by the

 $^{^1}$ Some take *moltas* as a Cognate Accusative (Plural) and assume that it is to be understood in the shorter passage. But the Plural is unlikely. See also $\alpha.$

following eius piacli moltaique dicator[ei] exactio est[od]. The construction might arise through a contamination of such expressions as magistro a. CCC multa sint (sunto) and magistrum a. CCC multae multato. Cf. the detached Abl. in U. muneklu habia numer prever (292), and L. Iupiter, tibi bove aurato voveo futurum (Acta Arvalium).

270. Genitive of the Matter Involved, in legal phraseology. O. suaepis... altrei castrous auti eituas zicolom dicust 'siquis alteri capitis aut pecuniae diem dixerit', that is, on a charge involving the death penalty or a fine (T. B. 13, 14; on castrous see note to passage), contrasted with dat castrid loufir en eituas 'de capite vel in pecunias' (T. B. 8, 9). Cf. L. quoad vel capitis vel pecuniae iudicasset privato (Livy 26, 3, 8), beside de capite, etc. A bolder example is O. aserum eizazunc egmazum pas exaiscen ligis scriftas set 'to make a seizure involving these matters which are written in these laws' (T. B. 24). Cf. L. eiq(ue) omnium rerum siremps lexs esto (T. B., Latin side). Note also the free use of the Genitive in the Law Code of Gortyna to denote the matter or person involved, e.g. τῶ ἐλευθέρω 'in the case of a freeman', τῶ χρόνω 'in the matter of time', ἢ ρεκάστω ἐγράτται 'as is written in each case'.

Note. To take such Genitives as depending on a noun either expressed (e.g. zicolom in the first Oscan example) or understood, is forced. It is possible, of course, that they originated in connection with a noun and afterwards came to modify the sentence as a whole, thus going through the reverse of the process seen in the case of the Adnominal Dative. But even this assumption is unnecessary, and it is more probable that we have to do simply with certain phases of a broad use of the Genitive denoting the sphere to which an action belongs.

271. Free use of the Genitive of a noun with gerundive in agreement. With L. (arma) quae cepit legum ac libertatis subvortundae (Sallust) compare U. uerfale pufe arsfertur trebeit ocrer peihaner 'the templum where the flamen remains for the purification of the mount' (VI a 8). A more striking example is U. sururo stiplatu pusi ocrer pihaner 'let him make the same request as for the purification of the mount' (VI b 48).

Note. This Genitive, which obviously modifies the sentence as a whole, and not a noun expressed or understood, belongs historically with the preceding. See note to 270.

DATIVE

- 272. Dative of the Indirect Object with transitive verbs. O. Anagtiai Diíviiai dunum deded 'Angitiae Diae donum dedit'; U. buf trif fetu Marte Grabouei 'boves tris facito Marti Grabovio'.
- 273. Dative with certain verbs used intransitively. U. ri esune kuraia 'rem divinam curet' (cf. $c\bar{u}r\bar{o}$ with Dative in early Latin); arsferture ehueltu 'flaminem iubeto' (cf. $iube\bar{o}$ with Dative in Tacitus); persnihmu Puemune 'supplicato Pomono'.
- 274. Dative with prepositional compounds. U. prosesetir strusla ficla arsueitu 'prosectis struem offam addito (advehito)', U. pir ase antentu 'ignem arae imponito'.
- 275. The Dative of Reference or Concern. U. aserio... anglaf esona mehe, tote Iioueine . . . 'observa . . . oscines divinas mihi, civitati Iguvinae' (VI a 4, 5); — O. piei ex comono pertemest '(the magistrate) in whose case the assembly shall be prevented in this way' (T. B. 7); — O. suaepis altrei . . . zicolom dicust 'siquis alteri...diem dixerit' (T. B. 13, 14); —U. pune karne speturie . . . naraklum vurtus 'cum carni *spectoriae . . . nuntiatio mutaverit' (II a 1); — U. ahauendu . . . atero pople 'avertito . . . malum populo' (VII a 27; cf. L. solstitium pecori defendite etc.); preuendu . . . atero tote 'advertito malum civitati' (VII a 11);— O. Maiiúí Vestirikiíúí . . . íním Maiiú[í] Iúvkiíúí . . . ekss kúmbened 'Maio Vestricio . . . et Maio Iovicio . . . ita convenit' (C. A. 1 ff.; observe the use of two Datives where Latin has one Dative and cum with the Ablative); — O. ekas iúvilas Iuveí Flagiuí stahínt hae *iovilae Iovi Flagio stant' (no. 25); — O. aasas ekask eestínt húrtúí 'these altars are for (belong to) the sacred grove' (T. A.).

'Note. Several of these Datives might of course be differently classified, e.g. that with O. kúmbened and U. preuendu under 274, that with ahauendu under a special class of "verbs of taking away." The last two examples cited are very close to the Dative of the Possessor (276), but this is only a special variety of the Dative of Reference and in our usual terminology is restricted to the use with the verb 'to be'.

276. Dative of the Possessor. U. etantu mutu afferture si 'tanta multa flamini sit' etc.

- 277. Dative with Adjectives of Relation. U. futu fons pacer... popule 'esto favens propitia... populo'; O. nessimas staiet veruis 'proximae stant portae' (but veruis may also be taken as an Ablative of the Point of View, 288).
- 278. Dative with Nouns. The Dative with nouns of verbal meaning (L. obtemperatio legibus etc.) is seen in U. tikamne Iuvie 'with a dedication to Iovius' (II a 8). The Dative of Reference with nouns is found only in brief clauses which are in the nature of headings, as O. Evklúí statíf 'Euclo statua' (T. A.).

ACCUSATIVE

279. The Accusative of the Direct Object with transitive verbs and the Accusative with Prepositions (299, 301) are of course extremely common. The Cognate Accusative is seen in U. teio subocau suboco 'te invoco invocationes' (VI a 22 etc.; cf. te bonas preces precor, Cato, De Agric. 134). Note also U. perca arsmatiam anouihimu 'virgam ritualem induitor' (cf. L. galeam induitor); — O. censamur eituam 'censetor pecuniam' (cf. voluisti magnum agri modum censeri, . . . cum te audisset servos suos esse censum, Cic. pro Flacco, 32).

LOCATIVE

- 280. In contrast to its restricted use in Latin, the Locative is widely used in Oscan-Umbrian. It has preserved a distinct form in the Singular, at least in the First and Second Declensions, to which nearly all the examples belong, while in the Plural it is merged with the Dative-Ablative-Instrumental. In Oscan it is ordinarily used without a preposition, but in Umbrian it is very frequently, perhaps always (see 169, 7), combined with the postpositive -en. For the Locative with other prepositions, see 301, 302.
- 281. Locative of Place. 1. OSCAN. Bansae 'at Bantia', Tiianei 'at Teanum', eisei terei 'in this territory', comenei 'in the assembly', viai mefiai 'in the middle of the road', aasai purasiai

'on the-fire-altar', lúvkeí 'in the grove', thesavreí 'in the treasury'; — with -en, húrtín 'in the grove' (171, 7), exaisc-en ligis 'in these laws'.

- 2. UMBRIAN. Akeřunie, Acersoniem 'at Acedonia', tote Iouine, toteme Iouinem (169, 7, a) 'in the city of Iguvium', ocre Fisie, ocrem Fisiem (169, 7, a) 'on the Fisian mount', destre onse, testre e uze 'on the right shoulder', arven 'in the field', tertie sviseve 'in the third pot', tafle e 'on the table', ferine 'on the stand'(?), manuv-e 'in the hand', Fondlir-e 'at the Springs', fesner-e 'at the fane'.
- 282. Locative of Time. 1. OSCAN. eizeic zicel[ei] on that day', alttrei pútereipid akenei in every other year' (? see 200, 2, a), pústrei iúklei at the following ceremony'(?), medikkiai in the meddixship', Fiuusasiais at the Floralia' (similarly eidúis Mamerttiais, Fiisiais púmperiais, used, in the iovilae-inscriptions, of certain festivals).
- 2. UMBRIAN. sume ustite 'at the last period'(?), kvestretie, uhtretie (251, 1, a), fratrecate, maronatei 'in the quaestorship' etc., plenasier urnasier, sehmenier dequrier 'at the festivals of—'.
- 283. A Locative of Circumstance is seen in O. eizeic uincter 'is convicted of this'. Cf. L. in hoc scelere convictus beside the usual Genitive construction.

ABLATIVE(-INSTRUMENTAL)

284. The fusion of the original Ablative and Instrumental was accomplished in the Italic period, so that in Oscan-Umbrian, as in Latin, they are no longer distinguished in form. For the Ablative with prepositions, see also 300, 302.

ABLATIVE USES

285. Ablative of the Place or Time Whence. O. Akudunniad 'from Acedonia', Tianud Sidikinud 'from Teanum Sidicinum' (both examples from coin-legends); — O. imad-en 'from the bottom up', eisuc-en ziculud 'from this day on' (the -en here is not

essential to the Ablative force). In Umbrian this Ablative is regularly accompanied by the preposition e, ehe 'ex' or the postpositive -ta, -tu, -to (300, 9), as ehe esu poplu 'from this people', akru-tu 'from the field', anglu-to hondomu . . . anglom-e somo 'from the lowest to the highest corner', pure-to 'from the fire'.

286. Ablative of the Source. O. eítiuvad múltasíkad, aragetud multas[íkud] 'from the money raised by fines'. Cf. L. (ex) aere conlato, aere moltaticod.

Note. These examples might also be classed under the Ablative of Means.

287. Ablative of Accordance. O. senateis tanginud (once with dat) 'in accordance with the judgment of the senate', U. ařputrati fratru Atiieřiu 'in accordance with the judgment of the Atiedian brothers', O. prupukid sverrunei 'spokesman(?) by previous agreement', U. fratru mersus 'in accordance with the customs of the brothers' (III 6; cf. L. (ex) moribus).

NOTE. This Ablative is probably, in part, of Instrumental origin, and is not always to be distinguished clearly from the Ablative (Instrumental) of Attendant Circumstances, and of Means.

- 288. Ablative of the Point of View. U. nesimei asa 'next to the altar' (L. proxime ab), testru sese asa 'at the right of the altar' (see 307); so probably U. todceir tuderus seipodruhpei 'on both sides, separately, of the city limits' (VI a 11).
- **289.** Ablative after Comparatives. O. mais zicolois X nesimois 'more than the ten following days'. Although mais might be used without effect on the following case, as sometimes L. $pl\bar{a}s$, an Ablative of Time seems less probable here.

Instrumental Uses

290. Ablative of Means. O. sakriss sakrafír, avt últiumam kerssnaís 'consecrate with victims, but the last with banquets'; — O. trístaamentud deded 'gave by will' (Ablative of Source also possible; cf. L. (ex) testamento); — U. mani nertru tenitu 'hold with the left hand'; — U. kletra fertuta 'carry on (by means of) a litter'; — U. esu bue pihafei 'expiate with this ox'; — U. vinu

persnihmu 'make supplication with wine', similarly, with verb understood, tio esu bue 'thee with this ox (I supplicate)'.

- a. U. herie uinu herie poni fetu 'vel vino vel posca facito' (VI b 19, 20) is to be compared with L. ture et vino fecerunt (Acta Arvalium), etc. But the Accusative construction is the usual one, as in Latin also, and the use of the Ablative here is perhaps due to its denoting a subsidiary offering, thus approaching the uses mentioned in 293.
- b. With L. quid hoc homine facias compare U. fetu uru pirse mers est 'do with him what is right' (VI b 55).
- 291. Ablative of the Route. U. uia auiecla etuto go by the augural way; O. eksuk amviannud eituns let them go(?) by this detour (see note to nos. 14–18). O. r[intúd] amnúd right around in a circle (C. A. 16, 17) is to be compared with L. sursum (deorsum) rivo recto (iugo recto) right up (down) the stream (ridge) (CIL. I 199).
- 292. Ablative of Measure and Price. O. via teremnattens perek(ais) III 'laid out the roads three rods wide'. Note especially U. muneklu habia numer prever pusti kastruvuf 'sportulam habeat nummis singulis in capita, shall receive a perquisite of one sesterce for each person' (V a 17, 18; cf. also V a 13).
- 293. Ablative of Accompaniment. This is regularly accompanied by the preposition com. U. com prinuatir stahitu 'stand with the assistants', eru-com prinuatur dur etuto 'let the two assistants go with him', O. com preiuatud actud, con preiuatud urust 'deal (plead) with the defendant', com atrud acum 'have a lawsuit with another'. But it also appears without the preposition where the feeling of accompaniment has become subordinate to that of means or manner. Thus U. apretu tures et pure 'go about (i.e. perform the lustration) with the bulls and the fire' (I b 20). Note the Ablative with and without com in U. eno com prinuatir peracris sacris ambretuto 'let him together with the assistants go about with unblemished victims' (VI b 56; but also etuto com peracris sacris, VI b 52). The Ablative of Accompaniment without com, in close attachment to a noun, also appears in U. arvia puni purtuvitu 'offer fruits of the field with sour wine'

- (II a 24) and U. persutru vaputis mefa vistiça feta fertu 'bring the persontrum with incense etc.' (II b 13), in which the feeling is much the same as in some of the examples given under the Ablative of Attendant Circumstances (294). See also 290, a.
- a. In Umbrian, the Ablative with postpositive -co(m), -ku(m), has developed a distinctly locative sense, 'at', e.g. asa-ku 'at the altar', termnu-co 'at the boundary', testru-ku peři, nertru-co persi 'at the right (left) foot', vuku-kum, uocu-com 'at the temple', ueris-co 'at the gate', etc. In the sense of 'with' the postpositive occurs only with pronominal forms, as eru-com (in example above). Cf. L. mēcum, quibuscum, etc.
- 294. Ablative of Attendant Circumstances, Manner, etc. U. eruhu tiçlu sestu Iuvepatre 'present to Jupiter with the same dedication' (II b 22), fetu tikamne Iuvie 'offer with a dedication to Iovius' (II a 8), arsier frite tio subocau 'with confidence in (thee) the holy one I invoke thee' (VI a 24 etc.; frite could also be a Locative in form, but probably belongs here rather than in 283), futu fos pacer pase tua 'be favorable and propitious with thy peace' (VI a 30 etc.), O. dolud mallud 'with guile';—here also O. medikeis serevkid 'under the inspection of the meddix', pr. meddixud 'under the magistracy of the praetor' (cf. Loc. medikkiai, 282).
- a. Of the same origin are the adverbial O. amiricatud '*immercato, without remuneration' (cf. L. $immerit\bar{o}$, $inauspic\bar{a}t\bar{o}$, etc.), and U. heritu 'consulto, intentionally' (see 307).
- 295. Ablative of Time. U. menzne kurçlasiu in the last(?) month' (II a 17), pesclu semu in the middle of the prayer' (VI b 15, 36).
- 296. Ablative Absolute. O. toutad praesentid in the presence of the people, U. aves anzeriates when the birds have been observed (I a 1 etc.).

LOCATIVE USES

297. The sphere of meaning of the Ablative (-Instrumental) overlaps that of the Locative at certain points, and in several of the examples already given the Ablative expresses what might

also be expressed by the Locative. Thus Means and Place are often identical, and we find U. mani kuveitu 'bring with the hand', mani tenitu 'hold with the hand' (290), beside manuv-e habetu 'hold in the hand'; — U. kletra fertuta 'carry by means of a litter' (290), beside tafle e fertu 'carry on a table'. The road by which one goes is also the road on which one is, and the Ablative of the Route may be used even where there is no word of motion. Cf. L. iam consul via Labicana ad fanum Quietis erat (Livy 4, 41, 8). The Ablative of Time, originally an Instrumental denoting duration of time, comes to be used with much the same force as the Locative of Time. See 295. The Ablative of Accompaniment with postpositive -co has developed a Loca-See 293, a. Cf. also the Ablative with op in Oscan tive force. in a strictly local meaning (300, 5).

These and other points of contact in function, together with the identity of form in the Plural which exists in all branches of Italic, have led in Latin to the almost complete absorption of the Locative by the Ablative. And even in Oscan-Umbrian, where in general the Locative preserves its identity, there are examples of the Ablative which can only be viewed as encroachments on the Locative, namely:

298. Ablative of the Place Where. U. tremnu serse 'sitting in the tent' (VI a 2, 16), sersi² pirsi sesust 'when he has seated himself on the seat' (VI a 5);—so also probably anderuomu sersitu (VI b 41), though anderuomu is of unknown meaning, and is taken by some as ander uomu 'inter——';— O. Búvaianúd 'at Bovianum' (no. 46; see p. 43, footnote).

¹ In consonant-stems in Umbrian the Abl. Sg. and Loc. Sg. are not to be distinguished, both ending in -e, which, like the L. -e, is probably the old Loc. ending -i. In Oscan there are no examples of the Locative in the Third Declension.

 $^{^2}$ Abl. Sg. of an *i*-stem. The Loe. Sg., whether of an *i*-stem or consonant-stem, would end in -e.

PREPOSITIONS 1

(AND THE CORRESPONDING PREFIXES 2)

With the Accusative only

299. 1. (L. ad). O. az (ad-s, like L. ab-s; 137, 2), U. -ař, -a (133, b). O. az húrtúm 'at the grove'; — U. asam-a '(return) to the altar', asam-ař '(offer etc.) at the altar', spinam-ař '(go) to the column', spiniam-a '(pray) at the column'.

CPDS. O. adfust 'aderit', aserum 'adserere' (137, 2), akkatus 'advocati' (89, 3, 102, 3, 139, 1), aflukad, aflakus (? 97, a, 139, 1), adpúd 'quoad' (202, 9);—U. ařpeltu 'adpellito', ařveitu, arveitu, arsueitu, etc. 'advehito', ařfertur, arsfertur, arfertur, etc. '*adfertor, flamen', neiřhabas 'ne adhibeant' (84), ařkani '*accinium, cantum', ařputrati 'arbitratu', ape, appei, etc. 'ubi' (202, 8), arnipo 'donec' (202, 10). For U. ař-, ar-, ars-, ar-, see 132 with a.

Note. U. -ař, -a, occurs only in Tables III, IV, and II a. Elsewhere 'to' is expressed by -e(n) (301, 2) and 'at' by -ku(m), -co(m) (293, a).

2. (L. ante). O. ant 'usque ad' (from *anti; see 92). The only example is ant púnttram (no. 3) 'up to the bridge' (i.e. 'up to in front of the bridge', and so 'close up to the bridge').

Note. The meaning 'before' is expressed by O. prai, U. pre (300, 7).

- 3. (L. $extr\bar{a}$). O. ehtrad (142, 190, 3). Thus ehtrad feihúss 'outside the walls'.
- 4. U. hondra, hutra 'infra' (15, 5, 188, 2). Thus hondra esto tudero 'below these limits', hondra furo, hutra furu 'below the forum'.
- a. O. huntrus teras (no. 19, 11) apparently means 'infra terram' and contains a related preposition, of obscure formation, followed by the Genitive. But the sentence is incomplete, and it is not wholly certain that huntrus cannot be simply Acc. Pl. 'inferos'.
- 5. (L. per). O. pert, U. pert 'trans' (from *per-ti; cf. post from *pos-ti). O. pert víam 'across the road', U. pert spinia 'beyond the column'. Cf. also O. am-pert 'not beyond, not more than',

¹ "Prepositions" is used here as a syntactical term and includes the postpositives.

² Given here for convenience. For prefixes which have no corresponding forms used as prepositions, see 263, 2, 264, 1.

which however is used adverbially, not as a preposition (see 269). The same form, joined postpositively to the Acc. Pl., appears in the numeral adverbs O. petiro-pert 'quater', U. triiuper, trio-per 'ter' (192, 2; for the loss of -t, see 127, 3).

CPDS. O. pert-umum (pert-emest, pert-emust) 'perimere, prevent'. The simple per- appears in O. per-emust 'perceperit', also in U. per-tentu 'stretch out' ('protendito' may be used in translating, since L. pertendo is used only in a transferred sense, but this per- has nothing to do with -per 'pro'; for U. perne etc. sec 300, 8, a), per-etom 'peritum', per-acni- 'sollemnis' (159, a); with intensive force, in U. per-acri- 'opimus, in perfect condition' (in form like L. per-ācer, but with the meaning which the root shows in Grk. ἀκμή etc.).

Note. The meaning 'beyond, across', seen in O.-U. pert, is an easy development of 'through', and traces of a similar use are found elsewhere. Cf. Lith. per tilta 'go over the bridge', per tris mylès 'over (more than) three miles', etc. Here, probably, L. perfidus.

6. O. perum 'sine' (*per-om; see 201, 5). Thus perum dolom mallom 'without guile'.

Note. The meaning is simply a further specialization of that seen in pert. Cf. Eng. 'beyond doubt' = 'without doubt'.

7. O. pústin, U. pustin, pusti, posti 'according to' (an extension of post, probably *posti-en). O. pústin slagím senates suveís tanginúd 'by vote of the respective senates according to the territory' (see note to C. A. 34); —U. posti acnu '(four pounds of spelt) for each year' (or 'ceremony'; see 159, a), pusti kastruvu '(one, two, or three sesterces) per head, for each person' (or 'estate'; but see note to T. B. 8, 13), pustin ançif 'by turns', pustin ereçlu '(to Pomonus and Vesuna) on their respective altars'.

Note. From a *posti-ne (cf. U. post-ne) one would expect O. *pústín with i, while from *posti-en the i of pústin is regular (see 44, b). For the meaning, cf. Eng. after = according to, in 'after their value', 'after our sins', etc., L. secundum, Germ. nach, etc., and also the distributive force of L. in in 'in singulos annos' etc.

8. (L. suprā). U. subra (157, 1, 190, 3). Thus subra esto tudero 'above these limits'. Elsewhere the form is used adverbially (subra screihtor 'written above' etc.).

With the Ablative only

300. 1. (L. amb-, Grk. $\dot{a}\mu\phi i$). O. ampt (see 161, a). Thus eksuk amviannud eituns ampt tribud tuv. ampt Mener by this detour let them go (?) around the Public Building (and) around the temple of Minerva' (no. 18). Except for this one example we find, as in Latin, only the prefix.

CPDS. The prefix appears usually as am-, rarely as amb- (Umbrian), and also in an extended form *amfer- (after anter-), O. amfr-, U. ambr-. See 161 with a.

- 2. (L. cum). O. com, U. com, -co(m), -ku(m). See 293 with a.
- CPDS. O. kúmbened 'convenit', kúmbennie's 'conventus', comparascuster 'consulta erit', kú]mparakine's 'consilii';—U. combifiatu 'nuntiato', couertu 'revertito' (17, 13), kuveitu 'convehito, congerito' (for co- before y cf. early Latin coventiōnōd, Volse. couehriu 'curia'), comoltu 'commolito', comohota 'commota' (17, 17), conegos 'genu nixus', kukehes 'incendat'(?). Cf. also O. comono 'comitia', U. kumne 'comitio' from *kom-no- (15, 4, 251, 2).
- 3. (L. $d\bar{e}$). O. dat (190, 3, a). Thus dat eizac egmad 'concerning this matter', dat eiza(i)sc 'concerning these matters', dat sena[teis] tanginud 'in accordance with the judgment of the senate' (also senateis tanginud, 286; cf. L. $d\bar{e}$ sententiā beside sententiā), dat castrid 'in a matter involving the death penalty' (also castrous, 270).

CPDS. O. dadikatted 'dedicavit', da[da]d 'dedit', dadid 'dediderit', all with dad- for dad-d- (163); — U. da-etom '*de-itum, delictum' (da from * $d\bar{a}d$ by 133, and extended to cpds.).

4. (L. ex, \bar{e}). U. e, ehe. There are only two examples, e-asa 'from the altar' and ehe esu poplu 'from this people', the meaning being commonly expressed by the postpositive $-t\bar{a}$ (below, 9).

CPDS. O. ehpeílatas 'erectae', ehpreívid (142, a); eestínt 'exstant', ee[stit] 'exstat', eehiianasúm 'emittendarum' (77, 1); — U. ehueltu 'iubeto', ehvelklu 'sententiam', eveietu 'voveto', eheturstahamu, eturstahmu 'exterminato', efurfatu 'expurgato'(?), ehiato 'emissos', ebetraf-e 'in exitus'. Cf. also O. ehtrad 'extra' and U. ap-ehtre 'ab extra' (142).

Note. The conditions under which the \bar{e} of O. eestint etc. arose are not clear. See 77, 1, with note.

- 5. (L. ob). O. úp, op (from *opi- by 92; cf. Grk. $\epsilon\pi\ell$, Skt. ℓpi). Thus úp eísúd sakaraklúd 'at this temple', [úp] slaagid 'at the boundary', op toutad, op eizois 'in the presence of the people, of these persons', 'apud populum', 'apud eos'.
- CPDS. O. osii[ns'adsint' (122, 2); U. ostendu'ostendito' (122, 1), probably ufestne (138, a), perhaps ooserclom (77, 3).
- 6. (L. post). O. púst, post, U. post, pus (from *pos-ti; cf. Lith. pàs etc.). O. púst feíhúís 'behind the walls', post eizuc, post exac 'after this'; U. post uerir, pusveres (139, 2) 'behind the gate'. Cf. L. posteā, posthāc. In origin this is probably an Ablative of the Point of View.
- a. In U. postertio pane 'postquam tertium' tertio is not an Ablative after post, but an independent adverb of time, post being here an adverb, forming together with pane a conjunction.
- Cf. the derivatives U. postne 'pone' (cf. perne 'ante'), whence pustnaiaf 'posticas'; O. posmom 'postremum', pústiris 'posterius', etc. See 139, 2, 188, 2, 189, 1.
- 7. (L. prae). O. prai, U. pre, pre (63). O. prai Mamerttiais 'before the Martian festival', U. pre uerir 'before the gate.' As only plural forms occur, the Locative is also possible, but it is far more probable that the case is the same as that used with pru, post, etc.
- CPDS. O. praesentid 'praesente,' praefucus 'praefectus'; U. prehabia 'praehibeat', prepesnimu 'praefator', preuendu 'advertito' (used in contrast to ahauendu 'avertito'), etc. Cf. also prepa 'priusquam' (202, 4) and pretra 'priores' (188, 2).
- 8. (L. $pr\bar{o}$). O. pru (53), U. -per, -pe(r) (from -pro, 91, 2; for -pe, see 103, 4). O. pru meddixud by virtue of magistracy' (L. $pr\bar{o}$ imperi \bar{o} etc.), pru medicatud in place of judgment', that is as if judgment had been rendered (cf. L. $pr\bar{o}$ ioudicat \bar{o} d, CIL. IX 782); U. tota-per, tuta-per, tuta-per for the city', poplu-per for the people', ocri-per for the mount', fratrus-per for the brothers', etc.
- Cpps. O. pruhipid 'prohibuerit', prupukid 'by previous agreement' (86, 5, 173, 5); U. prusekatu 'prosecato', procanurent '*procinuerint', prupehast 'ante piabit', etc. Note the distinct temporal force of the prefix in O. prupukid, U. prupehast. Cf. also O. pruter pan 'priusquam' (188, 2, 202, 4).

- a. In U. perne 'ante', pernaiaf 'anticas', O. Pernai 'Prorsae', the peris not from pro-, like U. -per, but is original. Cf. Lith. pérnai 'in the previous year', Grk. $\pi \acute{e}\rho \nu \sigma \iota$, etc.
- 9. U. -ta, -tu, -to (for - $t\bar{a}$; see 34), of uncertain origin. Thus skalçe-ta 'from the bowl', akru-tu 'from the field', pure-to 'from the fire', etc. See 285.

With the Accusative and Locative

- 301. 1. (L. inter). O. anter (U. anter-, ander-, 98, c, 156; no certain example of prepositional use). Thus O. anter slagim [A]bellanam inim Núvlanam between the territory of Abella and that of Nola' (C. A.; cf. also nos. 14–17); but anter teremniss within the boundaries' (that teremniss is an Ablative is much less likely). If we may judge from the single example, the Locative was used where the meaning is 'within'. In all examples of the Accusative the meaning is 'between (two points)'.
- CPDS. O. Anterstatai '*Interstitae'; U. andersislu 'intersidito', antermenzaru 'intermenstruarum', anderuacose, antervakaze '*intervacatio' (? see note to VIb 47, Ib 8), anderuomu (? see 298).
- 2. (L. in). O. en, -en, U. -en (-e, -em, 109, 1; once -i, 39, 5). With Accusative. O. en eituas 'for a fine', censtom-en' to the census'; U. anglom-e 'to the corner', fesnaf-e 'to the temple', etc. Frequently -en is used where Latin would prefer ad 'to', and in a few cases even like ad 'at'. Thus (VI a 10) anglu-to somo uapef-e auiehclu todcom-e tuder 'from the highest corner at the augural seats to the city limits' (uapef-e auiehclu resumes briefly the previous porsei nesimei uapersus auiehcleir est).

With Locative. O. exaisc-en ligis in these laws';—U. manuv-e in the hand', etc. See 280-282. For O. húrtín Kerríiín with -en added to both noun and adjective, see 171, 7.

- In O. imad-en 'from the bottom up', eisuc-en ziculud 'from this day on', -en is used adverbially.
- CPDS. O. embratur 'imperator', U. enetu 'inito', endendu 'intendito', iseçeles 'insectis' (39, 5). Cf. also the derivative O. Entraí '*Interae'.

- 3. (L. super). U. super with Locative, super-ne (cf. adverbs per-ne, post-ne, L. pōne, super-ne, etc.) with Accusative. Thus superne adro '(place the white vessels) over (on top of) the black'; but super kumne '(let loose the heifer) above the place of assembly', super erecle '(make libation) over the shrine'.
- 4. (L. trāns). U. traf, trahaf, traha, tra (110, 4). Thus traf Sahatam etu 'go across the Sacred Way' (similarly with covertu 'return', combifiatu 'announce'); but trahaf Sahate feetu 'sacrifice on the other side of the Sacred Way' (similarly tra ekvine fetu).

CPD. U. trahuorfi 'transverse'.

With the Locative and Ablative

302. (L. sub). O. συπ μεδικιαι in the meddixship;—but U. su maronato (su by 125, 1) in the maroship (see note to no. 84). Some assume that maronato is Loc. Sg., from a u-stem, but more probably it is Abl. Sg. of the o-stem seen in the Loc. Sg. maronatei. A difference in construction is more likely than a difference in stem. For both Locative and Ablative are paralleled by the corresponding constructions without the preposition (O. medikkiai, U. maronatei, etc., 282; — O. meddixud, 294). For the Abl. Sg. in -o see 171, 6, a.

CPDS. U. subocauu 'invoco' (102, 2), subahtu 'deponito, set down', subator 'set aside, omitted' (218; for force of sub cf. L. subdūcō 'remove'), sumtu 'sumito' (114, c), sutentu 'subtendito' (su- by 121), probably sufafiaf 'partis exsertas' (? cf. faf- in ex-fafillātō, Plautus Mil. Gl. 1180, and ef-fafilātum 'exertum', Festus ed. Thewrewk, p. 59), and sufeřaklu of uncertain meaning.

a. In Umbrian, forms of the adjective sopo- are used predicatively in the sense of 'sub'. See 306.

With Other Cases

303. (L. contrā). O. contrud (190, 2). In O. contrud exeic 'contrary to this' exeic is commonly taken as a Locative, but is much more easily understood as a Dative, properly a Dative of Relation with contrud used adverbially. Cf. L. siti contra pugnandum (Cels. 4, 5 (2)), huic contra itum (Tac. A. 11, 10).

304. The Genitive is found only with the so-called improper prepositions, as in O. egm[as touti]cas amnud 'rei publicae causa' (cf. amnúd 'circuitu'), U. ocrer pehaner paca 'montis piandi causa' (paca Abl. Sg. of *pākā-; cf. L. pāctum etc.). Another possible example is O. liímítú[m] permím 'in front of the boundaries' (C. A. 29), but the reading here is wholly uncertain. For O. ampert mistreis aeteis, where aeteis has been taken as a Genitive after ampert, see 269.

ADJECTIVES

305. Use of adjectives to denote a part. With L. summus mons etc., cf. U. pesclu semu in the half of the prayer' (semu: L. sēmi:; see 189, 1, a), that is, in the middle of the prayer, during the prayer'; — O. e]ísaí víaí mesiaí in the middle of this road'.

306. Predicative use of adjectives with the force of adverbs.¹ With L. sciēns 'wittingly', libēns 'willingly', etc., compare O. deiuatud sipus 'swear wittingly', U. tases persnimu 'pray silently', kutef pesnimu 'pray quietly', etc. Similarly U. postro in sopo postro peperscust 'put the under parts behind' is an adjective agreeing with sopo (cf. pustra, pustru, II a 32, II b 19), but in effect an adverb. U. sopo- is frequently used in the same way, like L. supīnus, Grk. ὕπτιος. Thus persuntru supu ereçle (IV 17), where supu, though an adjective agreeing with persuntru, has the force of 'sub', in contrast to the 'super' of persuntru. . . super ereçle (IV 19); — uestisia sopa purom-e (VI b 17; cf. also VII a 38), where sopa, though agreeing with uestisia, goes in sense with the following, sopa purom-e meaning 'beneath, into the fire' and so 'beneath the fire, sub ignem'.

ADVERBS

307. Predicate use of adverbs in the sense of adjectives ² (L. bene est, etc.). U. porsei nesimei asa deneia est 'which is next to the altar of the gods' (but O. nessimas staiet veruis 'stand

¹ That is, where an adverbial construction seems more natural to us.

² That is, where an adjectival construction seems more natural to us.

next to the gate'); — U. esuf testru sese as as as as a purtuvitu 'himself standing at the right of the altar he shall place the offering on the altar' (IV 15; cf. also III 23, IV 3), in which sese is probably an adverb, as if L. *sessē, meaning 'situated' (cf. L. dextrō-vorsum etc.); — U. eřek prufe si 'let this be approved', literally 'let this be (regarded as) properly (done)'1; — U. fetu puze neip eretu (II a 4) and, in briefer form, pusei neip heritu (VI a 27 etc.) '(take it) as not intentionally (done)'.

THE VERB

VOICE

- 308. The Passive. Besides the Passive force, as seen for example in O. uincter 'vincitur', comparascuster 'consulta erit', U. emantur 'accipiantur', ostensendi 'ostendentur', the Deponent use is frequent. So O. karanter 'vescuntur', U. terkantur 'suffragentur', U. eturstahmu 'exterminato', U. persnihimu 'precator', persnis fust 'precatus erit', etc. Sometimes, however, the Active form is used in contrast to the Deponent of the Latin, e.g. U. stiplo, stiplatu: L. stipulor;—U. osatu, O. upsed, etc.: L. operor (but O. upsatuh sent no. 44 is Deponent 'operati sunt', in contrast to U. oseto 'operata, facta'); O. fatíum: L. fateor. Compare the use of Active forms in early and late Latin parallel to Deponents of the classical period.
- a. With the Deponent use of L. $c\bar{e}n\bar{a}tus$ beside $c\bar{e}n\bar{o}$, $i\bar{u}r\bar{a}tus$ beside $i\bar{u}r\bar{o}$, etc., compare O. deiuatuns 'iurati', U. çersnatur furent 'cenaverint', and also U. uesticos (fust) 'libaverit' (230, a).
- b. A Passive form with distinctly middle force is seen in U. amparimu 'raise oneself, rise' beside the Active amparitu 'raise, set up (the litter)'. A similar relation is sometimes assumed between U. subra spahatu 'spread out over, throw on' (VI b 41) with object expressed (the vessels that have just been used), and subra spahmu (VI b 17, VII a 39), subra spafu (V a 20), with no objects expressed. But the meaning of the latter is probably not 'throw oneself over, walk over', but 'perform the ceremony of throwing on (the vessels)'.

¹ Cf. O. *izic amprufid facus estud* '(if any one has been made tribune of the people contrary to this) let him be (regarded as) made so improperly'.

- c. U. uestis, uesteis 'libans' is parallel to U. persnis 'precatus' both in formation and use. It comes from *uestīto-s, with verb-stem *uestī-, of which *uestikā- (U. uesticatu 'libato') is an extension. The etymology of this group of words, to which belong also U. vestiçia 'libamentum' and probably Uestisier, name of a god, is unknown.
- 309. The frequent impersonal use of the Passive (L. itur, itum est, etc.) is noteworthy, e.g. O. sakarater 'a sacrifice is made', U. purdito fust 'the offering shall take place', muieto fust 'a noise shall be made', herter 'it is desired, desirable' and so used like L. oportet. Nearly all of the forms in which r alone appears as the personal ending are used impersonally. See 239.
- 310. Transitive use of verbs usually intransitive, and vice versa. U. ninctu, in form L. ninguitō, means 'overwhelm with snow'; similarly U. sonitu 'overwhelm with sound', tremitu 'make tremble', though these are not of the same conjugation as L. sonō, tremō. Cf. also U. nepitu 'overwhelm with water' from a root seen in L. Neptūnus. U. habe (VI b 54 = I b 18) is used intransitively, 'holds himself, remains'.

TENSE

311. The use of the tenses shows no variation from what is found in Latin. The use of the Present Indicative to denote what is customary is frequent, as is natural in the language of ritual. It occurs with future meaning in some temporal and conditional clauses cited below. There is only one occurrence of the Imperfect Indicative, namely fufans 'erant', C. A. 10, where it simply denotes past situation, as so frequently in Latin. The Perfect Indicative occurs chiefly in dedications and inscriptions on public works, where it has the simple narrative force (Historical or Aoristic Perfect). The Future and Future Perfect are very frequent in temporal clauses, the difference between the two being the same as in Latin.

All the occurrences of the Imperfect Subjunctive are in clauses depending on an Historical Perfect, namely O. ekss kúmbened . . . puz ídík sakara[klúm] . . . fusíd, . . . pún patensíns, . . .

patensins, . . . [h]errins 'ita convēnit, ut id templum . . . esset, . . . cum aperirent, . . . aperirent, . . . caperent' (C. A. 10-54); also Pael. upsaseter coisatens 'fieret curaverunt'. The Perfect Subjunctive is regularly used in prohibitions and occasionally in positive commands and expressions of wish. See 312, 313. It occurs also a few times in temporal and conditional clauses (319, 320).

MOOD

Commands and Prohibitions

312. The Subjunctive of Command is frequent in Umbrian in the passage V a 1-V b 7, where the Atiedian Brothers decreed 'let the flamen, whoever he shall be, have the care (kuraia) of the ceremony, let him furnish (prehabia) whatever is necessary. him receive (habia) certain fees. When the brothers shall have feasted, let the magister or quaestor take a vote (ehvelklu feia) as to whether the matter has been properly looked after. And if the majority pronounce it satisfactory let it be approved (eřek prufe si). If not, let the magister or quaestor take a vote (ehvelklu feia) as to the amount of the penalty, and whatever penalty they demand, let the flamen's penalty be so great (etantu mutu afferture si)'. But even within the limits of this passage the Imperative occurs twice, and elsewhere the Imperative is almost exclusively employed, occurring in hundreds of examples. The other examples of the Subjunctive are ene tra Sahta kupifiaia 'then announce across the Sacred Way' (I b 35, in the midst of a series of Imperatives; the corresponding clause in VII a 43 has the Imperative combifiatu), and terkantur 'let them approve' (III 9, also in the midst of Imperatives).

Note. It is hardly accidental that the series of Subjunctives in Va is immediately preceded by eitipes decreverunt.' Although the clauses are not actually dependent, they are so closely attached in feeling that the choice of the Subjunctive rather than the Imperative may well be due to the exclusive use of the former in dependent clauses. Similarly fos sei, pacer sei be favorable and propitious, belonging under 314, always occurs immediately after the phrase teio subocau'I invoke thee', whereas elsewhere the Imperative futu fos pacer is used. Cf. VIa 22 ff.

In Oscan also, the Imperative is nearly always employed in positive commands. Examples of the Subjunctive are saahtúm tefúrúm sakahíter 'let a burnt-offering be made' (T. A.);—lamatir 'let him be beaten' (T. B.);—sakrafír 'let there be a consecration' (nos. 29, 30). For the use of the Perfect in the last two examples, cf. L. sit denique inscriptum in fronte unius cuiusque quid de re publica sentiat (Cic. Cat. 1, 13, 32), and see 313.

With the preponderance of the Imperative in both Oscan and Umbrian is to be compared the usage of early Latin inscriptions, in many of which (e.g. the Lex Bantina, Lex agraria) the Imperative is used exclusively, while in others (e.g. the Sententia Minuciorum) a Subjunctive of Command may now and then appear.

313. In prohibitions, Umbrian uses the Imperative regularly, the Present Subjunctive occurring once in neiřhabas 'let them not furnish' (IV 33). In Oscan, however, the Imperative is never used, but always the Perfect Subjunctive. Thus nep Abellanús nep Núvlanús pídum tríbarakattíns 'let neither the Abellani nor the Nolani build anything' (C. A. 46 ff.);—izic eizeic zicel[ei] comono ni hipid 'let him not hold an assembly on this day' (T. B. 7,8);—ne phim pruhipid 'let him not prevent any one' (T. B. 25);—nep fefacid 'let him not cause' (T. B. 10), in contrast to the Imperative factud of a positive command in the same sentence;—nep censtur fuid, nei suae pr. fust 'let no one be censor, unless he has been praetor' (T. B. 28).

Note. -This use of the Perfect Subjunctive is to be compared with the Greek use of $\mu\eta$ with the Aorist Subjunctive, and, together with its occasional use in positive commands (312) and expressions of wish (314), is to be connected with the energetic force natural to the aoristic function. No temporal distinction is involved.

The Subjunctive of Wish

314. The Subjunctive of Wish, though of different origin, is not always easily distinguished from the Subjunctive of Command. But certainly U. fos sei, pacer sei be favorable, propitious, alternating with futu fos pacer (see 312, note), belongs

here, likewise the Oscan Subjunctives in the Curse of Vibia and the shorter curse, no. 20, namely turumiiad, krustatar, kaispatar, lamatir 'may he be tortured, etc.', and, with the negative, nep pútiad, nep heriiad 'may he not be able, etc.' Here also U. pihafei 'may it be expiated' (VI a 29 etc.). For the use of the Perfect, as in the case of U. pihafei, O. lamatir (possibly krustatar, kaispatar; but see 238, c), which is also frequent in early Latin, see 313, note.

The Subjunctive in Substantive Clauses 2

315. The Subjunctive is usually introduced by O. puz, U. pusi 'ut' (202, 6), but in certain phrases, as in Latin, it may also stand without any conjunction. Examples are: U. stiplo aseriaia 'demand that I observe' (VI a 2); — U. etaians deitu 'let him tell them to go' (VI b 64); — U. combifiatu erus dersa 'let him give notice to add the erus' (VII a 44); but with an intervening clause as well as a different verb, carsitu . . . puse erus dersa 'let him call out . . . to add the erus' (VII a 43); — with U. ticit 'decet', herter 'oportet', O. kasit 'decet' (in form L. caret), as U. facia ticit 'one ought to sacrifice' (II a 17), O. fakiiad kasit 'one ought to sacrifice' (no. 31), U. dirsans herti'they ought to give', etc.; — O. ekss kúmbened . . . puz ídík sakara[klúm] . . . fusíd etc. 'it was agreed that this temple should be' etc. (C. A. 10 ff.; see also 311); — U. eo iso ostendu, pusi pir pureto cehefi dia (VI a 20), best taken as 'let him set them out in such a manner (iso) that (pusi) he cause (dia) one fire to be lighted from the other, ceheft depending directly on dia; — so probably U. pepurkurent herifi (V b 6) 'shall have urged to be necessary' (as if L. poposcerint oportuerit); — O. factud pous touto deiuatuns tanginom deicans let him cause the people to declare their opinion under oath' (T. B. 9).

¹ In Greek curses the Optative is used in both the positive and the negative form.

² For convenience the Subjunctives in Substantive Clauses are grouped together here, without regard to their specific origin (Volitive etc.).

A noteworthy construction is seen in O. nep fefacid pod pis dat eizac egmad min[s] deiuaid dolud malud 'let him prevent any one from swearing falsely in this matter' (T. B. 10 f.), in which nep fefacid is felt as the equivalent of a verb of preventing and followed by pod mins, which is identical with L. quōminus in meaning and nearly so in form (202, 1)1.

Clauses of Indirect Question

316. In U. ehvelklu feia . . . , panta muta ařferture si 'take a vote as to what the flamen's penalty shall be' (V b 1 f.), the si is simply a dependent Subjunctive of Deliberation or Propriety. But an unquestionable example of a Subjunctive in an indirect question of fact, where the direct question would have the Indicative, is U. ehvelklu feia . . . , sve rehte kuratu si 'take a vote as to whether it has been arranged properly' (V a 23 ff.).

Noteworthy, because of the lack of any interrogative word, is U. revestu... emantur herte 'see whether they are to be accepted' (V a 8, 10). Since even in Latin the original Indicative may still stand in indirect questions of fact, there is no necessity of taking herte as a Subjunctive. See 238, 2, a.

Relative Clauses 2

317. In nearly all the relative clauses occurring, whether the relative is definite or indefinite, and whatever the mood of the principal verb, the Indicative is used. Thus U. pisest..., eetu 'whoever is..., let him go' (VI b 53 f.); — O. sakaraklúm Herekleís [úp] slaagid púd íst,... puz ídík sakara[klúm]... fusíd 'that the temple of Hercules which is at the boundary... should be' (C. A. 11 f.); — U. pisi pumpe fust..., ere ri esune kuraia 'whoever shall be..., let him look after the ceremony' (V a 3 ff.); — O. censamur esuf... poizad ligud iusc censtur censaum angetuzet

¹ I cannot understand the objection of v. Planta (II, p. 482) to this view, nor his assertion that the construction does not correspond to L. *prohibeat quominus* but to prohibeat quominus non or prohibeat ut non.

² Except those of time, for which see 318.

'let him be rated according to the law by which the censors shall have proposed to take the census' (T. B. 19 f.), etc. (examples of the Future and Future Perfect are very numerous).

Hence in U. prehabia piře uraku ri esuna si herte, et pure esune sis 'let him furnish whatever is necessary for the ceremony, and whatever persons are necessary' (V a 5 f.) there is no necessity of taking herte as a Subjunctive (see 238, 2, a), and in the second clause sis probably depends on a herte to be supplied from the preceding, though of course a Subjunctive would also be possible (cf. cui iussus siet, auscultet, Cato, De Agric. 5, 3, etc.).

A reasonably certain example of a Subjunctive in a descriptive relative clause is seen in O. siom . . . idic tangineis deicum pod ualaemom touticom tadait ezum '(having sworn) that they will render such judgment as they think to be for the best public good' (T. B. 9 f.)¹.

Here may be mentioned, though persei is in this case a conjunction (202, 2), U. persei mersei 'so far as is right' (VI a 28, 38, 48) beside perse mers est (VI b 31, 55), the main verb each time being a Subjunctive. Cf. L. quod opus siet, used by Cato even where the main verb is Indicative (e.g. De Agric. 16). The choice of the two expressions, 'so far as is right' or 'so far as may be right', has nothing to do with the mood of the principal verb.

Temporal Clauses

318. All the temporal clauses which occur refer to future time, and in the great majority of cases, as in Latin, the Future or Future Perfect Indicative is used. The usual conjunctions are O. pon, U. ponne (202, 3) and U. ape (202, 8). The latter is far more common than ponne in the later Umbrian, and with the Future Perfect entirely displaces it (cf. ape ambrefurent VI b 56: puni amprefuus I b 20, etc.). U. puře (202, 1) and piře, pirsi (202, 2), also have temporal force sometimes, as in puře nuvime

 $^{^{-1}}$ Better taken so than as an Indirect Question (Verb-System, p. 144), since pod, not pid, is used.

ferest 'when he shall bring them the ninth time' (II a 26), sersi pirsi sesust 'when he shall have taken his seat' (VI a 5).

But the Present Indicative with future meaning is also found. Thus U. ponne oui furfant, uitlu toru trif fetu when they purify(?) the sheep, sacrifice three bull-calves' (VI b 43; furfant Pres. Indic. of Conj. I, as shown by efurfatu); — U. pune seste, urfeta manuve habetu when you dedicate (the calf), hold the orbita in the hand' (II b 22 f.); — U. ponne intengar tursiandu hertei when it is necessary to drive forth the heifers' (VII b 2; for hertei see 238, 2, a). Cf. also O. adpúd fiiet so long as they occur' (no. 31 a; for adpúd see 202, 9).

Compare the Latin use of the Present Indicative with future force after antequam and priusquam, and, especially in early Latin, in relative and conditional clauses (see also 319).

The Present Subjunctive is also found. Thus O. pun far kahad, nip putilad edum 'when he takes food, may he not be able to eat' (no. 19, 8); — U. pone esonome ferar pufe pir entelust, ere fertu, poe . . . 'when that in which the fire has been placed is brought to the ceremony, let him bring it, who . . . '(VI b 50).

This of course is the Anticipatory Subjunctive, which is frequent enough in such clauses in early Latin, and which in Oscan-Umbrian, as in Latin, was not completely displaced by the Future Indicative (itself a Subjunctive in origin).

The Imperfect Subjunctive occurs in C. A. 50, where the verbs of the surrounding clauses are also in the same tense, depending on ekss kúmbened. See above, 311.

319. With the Conjunctions meaning 'before', 'after', 'until', namely O. pruter pan (202, 4), U. prepa (202, 4), post pane (202, 4), nersa (202, 11), arnipo (202, 10), the Future Perfect is the commonest construction, but there is one occurrence each of the Future Indicative and the Perfect Subjunctive, the latter, as in Latin, with the same force as the Future Perfect. Thus:

Future. — O. com preinatud actud, pruter pam medicatinom didest 'let him treat with the defendant before he gives judgment' (T. B. 15 f.).

Future Perfect. — U. nep andersistu, nersa courtust porsi angla anseriato iust 'one shall not interrupt(?) until the one who has gone to observe the birds has returned' (VI a 6); — U. postertio pane poplo andirsafust, . . . persnihimumo 'after he has performed the lustration of the people the third time, . . . let them pray' (VII a 46 f.); — eam mani nertru tenitu, arnipo uestisia uesticos 'let him hold it in the left hand until he has poured out the libation' (VI b 24 f.); — anderuomu sersitu, arnipo comatir pesnis fust 'let him sit in the . . . until he has prayed with the broken cakes' (VI b 41).

Perfect Subjunctive. — neip amboltu, prepa desua combifiansi one shall not go around before he has announced a propitious bird' (VI b 52).

Conditional Clauses

320. In conditional clauses, introduced by O. svai, suae, U. sve, sue (202, 14), the commonest construction is the Future or Future Perfect Indicative, the main verb being usually an Imperative or Subjunctive of Command. The Tabula Bantina alone furnishes some sixteen examples. The Future Perfect in both condition and conclusion occurs once in Umbrian (VI a 7). U. piře, pirsi (202, 2), also, sometimes has conditional force 'in case that, if', e.g. persei . . . pir orto est 'if a fire has occurred' (VI a 26 etc.), peře . . . aiu urtu fefure 'if disturbances(?) shall have occurred' (II a 3; see 128, 2, a).

The Present Indicative with future force, which is frequent in early Latin legal inscriptions and is found occasionally in Latin poetry (e.g. Verg. Aen. 3, 606), is seen in O. suaepis censtomen nei cebnust, in eizeic uincter, esuf lamatir if any one shall not have come to the census and is convicted of it, let him be beaten' (T. B. 20 f.). Cf. also U. svepis habe if any one remains' (I b 18), svepis heri if any one wishes' (IV 26).

The Present Subjunctive is found in U. svepu... vakaze, suepo... uacose (I b 8, VI b 47), according to the explanation as *uacos-se 'vacatio sit'. See note to passage.

The Perfect Subjunctive in future or future perfect sense, also found in Latin, is seen in O. svai neip dadid, lamatir 'if he does not give it up, let him be beaten' (no. 19, 4); — so probably U. ier (238, 2) in nosue ier ehe esu poplu, . . . , portatu . . . 'if one does not go from this people, carry him . . . ' (VI b 54 f.).

221

Noteworthy, because of the lack of any conjunction, is . U. heriei façiu ařfertur, . . . façia tiçit 'if the flamen wishes to make the sacrifice, it is proper' (II a 16 f.).

INFINITIVES AND PARTICIPLES

321. The Present Infinitive is used as in Latin. The construction with subject Accusative is already developed, e.g. O. deiuatuns... siom deicum 'having sworn that they will say' (T. B. 9) etc. The Supine is used exactly as in Latin, e.g. U. aseriato etu 'go to observe.' For the -to- Participle without passive force, see 308, a. The Gerundive is used as in Latin, e.g. iúvilas sakrannas 'the iovilae to be consecrated', úpsannam deded 'had made', etc. For the Genitive construction in U. ocrer pihaner, see 271.

AGREEMENT

- 322. Agreement of adjectives belonging to nouns of different gender. Agreement with the Masculine is seen in U. peiqu peica merstu 'pico pica iusto' (VI a 1; but elsewhere with adjective repeated, peico mersto peica mersta, etc.). Agreement with the nearest noun is seen in the recurring passage (VI a 32 f. etc.) saluo seritu ocrer Fisier, totar Iiouinar nome, nerf, arsmo, ueiro, pequo castruo, fri salua seritu 'salvum servato arcis Fisiae, civitatis Iguvinae nomen, principes, ritus, viros, pecuum capita, fruges salvas servato', where saluo agrees with the first object nome, and salua with the last, fri.
- 323. Agreement by sense. As in Latin, the Plural may be used with a collective noun or a noun joined to another by com. Thus O. pous touto deiuatuns tanginom deicans 'ut populus

iurati sententiam dicant' (T. B. 9); — U. sve mestru karu fratru Atiieřiu, pure ulu benurent, prusikurent 'si maior pars fratrum Atiediorum, qui illue venerint, pronuntiaverint' (V a 24 ff.); —U. com prinuatir . . . ambretuto, . . . com prinuatir eso persnimumo 'cum legatis ambiunto, cum legatis sic precantor', 'let him (the flamen) with the assistants go about, pray' (VI b 56 f.). Cf. also U. hondra furo sehemeniar hatuto totar pisi heriest 'infra forum seminarium capiunto civitatis quisquis volet' (VII a 52).

324. Attraction. The attraction of a noun to the case of the relative pronoun is seen in U. uasor (Nom. Pl.) uerisco Treblanir, porsi ocrer pehaner paca ostensendi, eo iso ostendu 'vasa ad portam Trebulanam, quae arcis piandae causa ostendentur, ea sic ostendito' (VI a 19 f.); — also in O. eítiuvam paam . . . deded, eísak eítiuvad 'pecuniam quam dedit, ea pecunia' (no. 4), though here the noun is repeated in its proper case. In Latin such attraction is mainly poetical in the best period (urbem quam statuo vestra est, Verg. Aen. 1, 573), but not uncommon in early prose. Cf. Vituries quei . . . damnati sunt, . . . eos omneis etc. (CIL. I 199, 43 f.), viatores praecones quei ex hac lege lectei sublectei erunt, eis viatoribus praeconibus etc. (CIL. I 202, col. II, 31 f.).

OMISSION OF WORDS

325. Asyndeton. The omission of the connective in a series of coördinate words or clauses is, as in Latin and elsewhere, extremely common. Noticeable is the frequency of phrases consisting of pairs of words without connective, like L. volens propitius etc. Thus U. fons pacer 'favorable and propitious', pernaiaf pustnaiaf 'before and behind', antakres kumates 'whole and broken', ařepes arves 'offerings of fat and the fruits of the field', atru alfu 'black and white' (I b 29), dupursus peturpursus 'bipeds and quadrupeds', perne postne 'before and after', fato fito 'success and good fortune' (as if L. factum fitum, the first referring to 'efficiency, successful accomplishment', 'the second to 'that which happens, turns out well, good fortune'),

sepse sarsite 'together and completely' (cf. L. sane sarteque; for the forms see 244, 1, b, 244, 3)¹, veskla snata asnata 'vessels wet and dry' (i.e. vessels for liquids and those not for liquids; cf. Eng. 'dry measure' and 'liquid measure'). Note also O. pr. censtur 'praetor or censor' (T. B. 27).

- 326. Omission of the Subject. In the Iguvinian Tables, as in early Latin prose, the subject is frequently left unexpressed, when it is well understood who is the proper person to perform the action in question. Thus ape apelust, muneklu habia etc. (V a 17 ff.) 'when one (i.e. the proper person, in this case the flamen) shall have performed certain rites, he shall receive certain fees'. Even when there is a change of subject, it may be left unexpressed. Thus in VI b 48 ff. there is a series of verbs with no subject expressed, though some of the actions are performed by the augur and others by the flamen, as is seen from the more detailed statements in VI a 1 ff.
- 327. Omission of the Verb. The verb subocauu 'invoco' is omitted in U. tio esu bue peracrei pihaclu 'te hoc bove opimo piaculo' (VI a 25 etc.), tiu puni tiu vinu 'te posca te vino' (II a 25), with which compare L. te hoc porco piaculo (Cato, De Agric. 141, 4). Corresponding to eno deitu arsmahamo etc. 'tunc dicito: "ordinamini" 'etc. (VI b 56 etc.) the older version has simply enumek armamu etc. 'tunc "ordinamini" 'etc. (I b 19 etc.).

The omission of the verb or of the object in dedications is of course common, likewise of the verb when it is readily supplied from a preceding clause.

ORDER OF WORDS

328. There is no fundamental difference from the Latin order, the resemblance being closest with the style of early prose such as that of Cato or the inscriptions. The following points are perhaps worthy of mention.

¹ U. sepse sarsite is also taken as 'separately and together', sepse being explained as from *se-pse. But this is on the whole less likely.

- 1. As in Latin, the adjective regularly follows its noun, but may precede it if emphatic. Thus U. ocri-per Fisiu, tota-per Iiouina 'pro monte Fisio, pro civitate Iguvina', etc., but destru-co persi, nertru-co persi 'ad dextrum (sinistrum) pedem', destram-e scapla 'in dextram scapulam', etc. In the numerous sacrifices of three victims the numeral always follows its noun in VI a 22, 58, VI b 1, 3 etc., but always precedes it in the earlier version (I a 3, 7, 11, 14 etc.). Demonstrative pronouns precede, possessives follow their nouns, as in Latin.
- 2. As in Latin, words or even whole clauses belonging to a subordinate clause are sometimes introduced before the relative pronoun or conjunction. Thus O. prai Mamerttiais pas set 'which are before the Martian' (no. 27), beside the normal order in the companion inscription (no. 28); O. sakaraklúm Herekleís [úp] slaagid púd íst 'the temple of Hercules which is at the boundary' (C. A. 11 ff.). In this last passage all the words quoted, together with the succeeding four lines, belong to the clause introduced by puz (l. 17), which depends upon ekss kúmbened (l. 10). But in this case, owing to the length of the intervening relative clauses, the subjects are repeated after puz. Cf. L. sei ques esent quei sibei deicerent necesus ese Bacanal habere, eeis utei ad pr. urbanum Romam venirent (SC. de Bacch. 3 ff.).
- 3. With a series of objects the verb is sometimes placed before the first and repeated after the last. Thus U. fertu... fertu (II a 17 ff.), pihatu... pihatu (VI a 29 f.), seritu... seritu (VI a 32 f.; quoted in 322).

COLLECTION OF INSCRIPTIONS

The following collection contains all the more important inscriptions. Those omitted contain, for the most part, only proper names or mutilated words.

Uncertain letters are indicated by a change in type, italic in black-face text, roman in italic text. Obvious mistakes are corrected in the text, the original reading being given in a footnote. Where there can be any reasonable doubt as to a correction, it is given in the footnote, the original reading being left in the text. Mistakes in the division of words (which is indicated by dots, usually one, sometimes two) are corrected without remark. Restorations are inclosed in brackets. The division of the lines is indicated by |, except where the printed lines follow those of the original.

For the sake of convenience, capitals and marks of abbreviation and punctuation are supplied in the text, as well as in the translation.³ The translation of the more uncertain words is given in italics, or sometimes omitted entirely; yet from the fact that a given translation is not italicized it does not follow that this translation is undisputed, but only that the author regards it as reasonably certain. A few fictitious Latin words are used for convenience, and marked with an asterisk. But transcriptions and translations of proper names, even when unknown in Latin, are not so marked, except in the Glossary. The brief comments to some of the inscriptions are merely supplementary to the Glossary.

For each inscription the corresponding numbers of the collections of Conway and v. Planta are given. Some slight variations from the reading of one or both of these are based upon autopsy. See the author's Critical Notes to Oscan Inscriptions, I.F. 12, 13 ff.

OSCAN INSCRIPTIONS

The Cippus Abellanus and the Tabula Bantina are given first, as furnishing connected reading of some length and illustrating the spelling in each of the two alphabets. They are also commented upon more fully than the other inscriptions. After these numbers the arrangement is geographical.

¹ Many letters which are somewhat mutilated, but of which enough remains to make it perfectly clear what was intended, are printed without change of type. In the texts of Conway and v. Planta mutilated letters are marked more freely. I am not sure now that I have been entirely consistent in this matter, but think I have not failed to mark letters which are mutilated enough to be really doubtful.

² In the case of a one-line inscription covering more than one line of printed text, | is added at the end. So nos. 6, 41 b, etc.

³ But in some cases where the interpretation is extremely doubtful, notably in no. 19, marks of punctuation are omitted from the text and given only in the translation.

1. Cippus Abellanus

A limestone tablet about 6 feet 5 inches high, 1 foot 8 inches broad, and 11 inches thick. Inscribed on both sides. Found in 1745 at Avella in use as a door-step, and believed to have been brought from Castel d'Avella, the probable site of the ancient Abella. Now in the Seminary at Nola. Conway no. 95, v. Planta no. 127.

COMMENTARY

Cf. Mommsen, Unterital. Dial., 121 ff.; Bücheler, Commentationes philologicae in honorem Th. Mommseni, 227 ff.; Bartholomae, I.F. 6, 307 ff.; v. Planta II, 622 ff.; Conway, Exempla Selecta, 10 ff.

The inscription contains an agreement between the cities of Nola and Abella in regard to a temple of Hercules, which was situated on the boundaries and owned in common. Such joint ownership of temples was not uncommon in antiquity. One may recall the temple of Artemis Limnatis on Mt. Taygetus which caused endless trouble between the Laconians and Messenians (Pausanias 4, 4, 2), the temple and grove of Juno Sospita at Lanuvium common to the Romans and Latins (Livy 8, 14), and especially the temple which Servius Tullius built on the Aventine for the use of Romans and Latins (Livy 1, 45; Dion. Hal. 4, 26). For this temple on the Aventine we are told that Servius Tullius made regulations and had them inscribed on a bronze stele which was placed in the temple, where it remained "until my time, with letters such as the Greeks once used" (Dion. Hal. l. c.). The Cippus Abellanus is probably one of two copies, the other having been set up at Nola.1

The precise date is unknown. The prominence of the senate points to a period after 216 B.C., when the powers of the senate of Nola were notably increased, while it can hardly be later than the Social War, in which Nola was virtually ruined. One may take 150 B.C. as an approximate date.

The general arrangement of the temple property here is one that is well known elsewhere. The land immediately

¹ This was Mommsen's view and is distinctly favored by the provenance of the tablet; Bücheler, as is evident from his explanation of slaagid, l. 12, as 'e regione', supposes there was only one tablet, which was set up near the site of the temple; and Conway urges that "the cost of erecting such a block and cutting such a long inscription would surely have been too considerable to allow of two copies where one would do." But dual copies of even longer inscriptions are well attested. Cf., for example, Dittenberger, Syll. Inser. Graec.², no. 20, an inscription of over sixty lines on a marble stele found at Eleusis, another copy of which was ordered set up on the Acropolis at Athens; further, Cöllitz, Sammlung d. griech. Dialekt-Inschriften, no. 345 (over 90 lines, two copies authorized), Collitz, no. 3624 (325 lines, three copies authorized), etc.

surrounding the temple formed the sacred precinct proper and was inclosed by walls. Outside of this was the land which was a part of the temple property but not withheld from secular uses. This was marked off by a series of boundary-stones. Such land was often used for pasturage and thus made a source of considerable income. In the case of our inscription, building was to be permitted on this land, if properly sanctioned.

Summary of Contents, and Notes

- ll. 1-10. Agreed as follows between the quaestor of Abella and the meddix of Nola and the delegates of Abella and Nola, appointed by their respective senates:
- l. 2. The word sverrunei does not refer to a special kind of quaestorship or to some other regular office held in addition to the quaestorship, but rather to a special appointment made 'by previous agreement' (prupukid) with reference to the business in hand. According to the very probable connection with Eng. swear and an-swer (see 96), it may well have some such meaning as 'spokesman.'
- l. 5. Besides the meddiss túvtíks which appears in inscriptions of Pompeii, Herculaneum, Capua, and Bovianum, and seems to designate the head of a league of cities, the title meddix (see 15, 6) was also applied to municipal officers. Cf. medikeís Púmpaiianeís, no. 3. At Nola (cf. also no. 42, from which it appears that there were two such officials, and no. 43) the title was defined by a word which corresponds in form to a L. *decentārius. This may be explained either as related to L. decēns (cf. L. dīcentārius from dīcēns) and meaning 'regularly appointed, ordinarius', or as related to L. decem (see 191, 10) and referring to some organization of the city's territory or population of which we have no precise knowledge.
- ll. 11-23. That the temple of Hercules, and the adjacent land within the outer boundaries which have been set around, be held in common, and the income from them be joint income of both cities.
- l. 12. slaagid (perhaps related to O.Ir. slicht 'track', slige 'street') means properly 'boundary, border' as here, but the word was also used, like L. finis in the Plural, of 'territory, district', and this is the meaning of slagim in ll. 34, 54.
- ll. 27-48. If any one wishes to erect a building on the land in front of the temple limits, outside the wall running about the fane and across the road, it may be done with the sanction of the

senate under whose jurisdiction the land falls. If the Nolans build, the building and its income shall belong to them; to the inhabitants of Abella, if they build. But behind the wall surrounding the fane, no one shall erect a building.

- l. 29. The reading of the second word is very uncertain. The best sense would be given by a word meaning 'inside of', the limitú- being understood as equivalent to the teremenniú inclosing the whole temple property. So if we accept pernúm it may mean 'in front of' looked at from the inside, as in the case of pert víam, l. 33.
- l. 33. To understand pert viam we must assume that a road skirted the walls. Possibly the road connecting Nola and Abella ran up to the walls and then divided, passing around on each side.
- ll. 34-35. 'By the vote of the respective senates according to the territory'. As the temple was situated on the boundary, the adjacent land would include sections from the original territory of both cities, each city retaining jurisdiction over its own section in the matter of granting permission to build.
- ll. 48-54. When they open the treasury which is in this territory, they are to open it by common consent, and whatever is in the treasury they are to share.
- ll. 54-58. The boundary-stones are on the road between the territory of Abella and that of Nola.

This last sentence defines the locality of the boundary-stones, but the precise meaning is obscured by the uncertainty of the reading in l. 56. At the beginning the old reading p]úllad taken as 'qua' gives a reasonable sense, but there is no support for such a word, as there is for s]úllad. At the end the only really certain letters are edú, and, while the old reading tedur is out of the question, v. Planta's pedú X is only a possibility. The old explanation of uruvú as 'flexa', related to L. urvum, the curved part of a plow (which is then not to be connected with Skt. vrj-'turn'), is in itself simpler than the connection with Grk. $\epsilon \dot{v} \rho \dot{v} s$, Skt. $ur \dot{u}$ -'wide', though it must be confessed that either 'qua . . . flexa' or 'ubique . . . lata' seems a better combination than 'ubique . . . flexa'. But the whole line is puzzling. It is not even clear whether the road referred to is one connecting the two cities, or one which itself forms the boundary-line between their respective territories.

2. Tabula Bantina

Fragment of a bronze tablet, about 15 by 10 inches, containing also, on the other side, a Latin inscription (CIL. I 197). The Oscan inscription was originally in two columns, a few letters of the right-hand column still showing. The fragment represents the middle portion of the left-hand column, and probably

contains about one sixth of the whole inscription. Found in 1793 at Bantia, near the boundaries of Apulia and Lucania. Now in the Museum at Naples. Written in the Latin alphabet. There are six paragraphs, divided by spaces. Conway no. 28, v. Pl. no. 17.

COMMENTARY

... magisterium.

Cf. Kirchhoff, Das Stadtrecht von Bantia; Lange, Die oskische Inschrift der Tabula Bantina; Jordan, B.B. 6, 195 ff. (for the Avellino fragment); Bréal, Mém. Soc. Ling. 4, 381 ff.; Bücheler in Bruns, Fontes iuris Romani⁶, 48 ff.; Moratti, Archivio giuridico, 1894, 74 ff.; v. Planta II, 599 ff.; Conway, Exempla Selecta, 2 ff.

The inscription contains a series of municipal regulations for the town of Bantia. Its date and relation to the Latin inscription on the other side of the tablet are matters of dispute. But the probability is that the Latin inscription, the date of which falls somewhere between 132 and 117 B.C., is

¹ From l. 29 on so much is lost that, even with the help of an inexact copy of a fragment containing a portion of what is now missing (called the Avellino fragment), no certain restoration of the whole text can be made.

quite independent of the Oscan and somewhat earlier. The Oscan inscription belongs then to the last quarter of the second century B.C.

Translation and Notes

I

- ll. 1-4. Only the conclusion beginning with deiuast is clear.
- "... he shall take oath with the assent of the majority of the senate provided that not less than forty are present when the matter is under advisement."
- ll. 4-8. "If any one by right of intercession shall prevent the assembly, before preventing it he shall swear wittingly in the assembly without guile that he prevents this assembly rather for the sake of the public welfare than out of favor or malice toward any one, and that too in accordance with the judgment of the majority of the senate. The presiding magistrate whose assembly is prevented in this way shall not hold the assembly on this day."

The verb *pertemō (pertemust etc.) is used in the technical sense of 'prevent by intercession'. The intercession at Rome, while possible to any magistrate of a rank equal to or higher than that of the one in charge, was a prerogative employed especially by the tribunes of the people. These officials existed at Bantia, as is seen from 1.30. The intercession could be exercised, among other occasions, against calling together the assembly, no matter for what purpose summoned. But sometimes a particular law contained the special provision that no intercession should be allowed. In our inscription the right of intercession is conditioned upon an oath to the effect that the privilege is exercised in the public interest, and with the approval of the senate. Compare the voluntary oath taken by Tiberius Gracchus, when interceding against the imprisonment of Scipio Asiaticus, that it was not due to any friendship for Scipio Africanus (Aul. Gell. 6, 19); and also the fact that even at Rome, in the case of a comitia summoned for the election of magistrates, the intercession was dependent on the sanction of the senate (Cic. ad Att. 4, 16, 6). On the general subject of the intercession see Class. Dict. s.v.

- 1. 5. The phrase sipus perum dolom mallom is simply the reverse of the common Latin formula sciens dolo malo, which occurs with prohibitions, as 'let him not swear (or act) wittingly with guile'.
- l. 6. The phrase pieisum brateis auti cadeis amnud is clearly the equivalent of cuiuspiam gratiae aut inimicitiae causa of Latin legal phraseology, and the Greek οὖτε χάριτος ἔνεκ' οὖτε ἔχθρας.¹

¹ For brateis (also Pael. bratom, brata, Vest. brat.) no satisfactory etymology has been suggested, while cadeis may well be related to Goth. hatis, Eng. hate.

2

"Whatever magistrate shall hereafter hold an assembly in a suit involving the death penalty or a fine, let him make the people pronounce judgment after having sworn that they will render such judgment as they believe to be for the best public good, and let him prevent any one from swearing in this matter with guile. If any one shall act or hold an assembly contrary to this, let the fine be 2000 sesterces. And if any magistrate prefers to fix the fine, he may do so, provided it is for less than half the property of the guilty person."

This and the following section refer to the assembly in its judiciary function as a court of appeal.

With dat castrid loufir en eituas (ll. 8, 9) and castrous auti eituas (l. 13) compare the Roman iudicia capitis ¹ and iudicia pecuniae. Cf. Livy 26, 3, 8 quoad vel capitis vel pecuniae iudicasset privato (note also in this passage privato = reo, as in ll. 15, 16).

With Il. 9, 10, compare iuranto... neque se aliter consilium habiturum... neque sententiam dicturum, quam ut ex h(ac) l(ege) exque re communi municipum eius municipi censeat fore (CIL. II 1963).

l. 10. For the construction with nep fefacid, see 315, end.

For ll. 12, 13, see 269.

The Umbrian castruo, kastruvuf, which cannot be separated from the Oscan forms, occur in two often repeated phrases. In Va 13 ff. the perquisite for the performance of certain ceremonies is fixed at so much pusti kastruvuf, commonly taken

¹ Nearly all commentators have taken dat castrid and castrous as 'de fundo', 'fundi'. But the objection raised long ago by Lange, Tab. Bant., 21 ff., has never been answered, namely that according to all Roman analogies we have to do with criminal procedure, in which a suit involving real estate would have no place. He translates 'capitis', but with an untenable explanation of the form. Recently Bréal, Mém. Soc. Ling. 11, 5, without recollection of Lange's view, quotes the opinion of a legal colleague that 'capitis', not 'fundi', gives the contrast to be expected, and suggests that castrid, castrous, were inscribed by mistake in place of a word corresponding to L. caput. But this last assumption is not necessary. For, retaining the formal connection with L. castrum, the meaning 'head', though apparently remote, is more easily explained than 'real estate'. The word is generally connected with L. cassis, and so would contain the root (s)kat, s(k)ad-'cover, protect', the cognate nearest in form being Skt. chattra-m' parasol'. From the meaning 'protection', whence in L. 'fortress', may come 'cover' or 'summit', which frequently interchange with 'head'. Cf. Skt. kakud 'mountain-peak' and 'head'; — Germ. Giebel: Grk. κεφαλή; — Germ. kopf probably: Eng. cop, Dutch kopje; - and especially Germ. Dach 'covering, roof' (decken, $\sigma \tau \dot{\epsilon} \gamma \omega$, etc.), used dialectically in sense of 'head'.

3

"If any magistrate shall have appointed the day for another in a suit involving the death penalty or a fine, he must not hold the assembly until he has brought the accusation four times in the presence of the people without guile, and the people have been advised of the fourth day. Four times, and not more than five, must he argue the case with the defendant before he pronounces the indictment, and when he has argued for the last time with the defendant he must not hold the assembly within thirty days from that day. And if any one shall have done contrary to this, if any magistrate wishes to fix the fine, he may, but only for less than half the property of the guilty person be it permitted."

The Roman procedure, as described in Cic. pro domo, 17, 45, Livy 26, 3, etc., is followed closely except that, according to the usual understanding of the case (otherwise Lange, Tab. Bant., 65 ff.), the interval of the trinundinum at Rome occurred after the third preliminary hearing, the quarta accusatio being immediately followed by the decision of the comitia; whereas at Bantia the interval of thirty days (this was also a recognized interval at Rome for certain classes of trials) was between the last hearing, which was the fourth or sometimes even the fifth, and the convocation of the comitia.

The op toutad, l. 14, refers to the informal assembly, the contio. The trutum zico., l. 15 (cf. the die prodicta, Cic. l. c.), probably means the fourth day, that is the day for the fourth and (usually) final hearing, though trutum is also taken as 'definitum, fixed'.

4

"When the censors shall take the census of the people of Bantia, whoever is a citizen of Bantia shall be rated, himself and his property, according to the law under which these

as 'in fundos', 'for each estate'. But the meaning 'in capita', 'for each person' (cf. Livy 2, 33, 11, etc.) is more appropriate (cf. in hominem a. II, CIL. VI 820). In the other passage, where the word occurs among a series of objects which the god is asked to preserve (VI a 30 etc.), the meaning 'capita' is less attractive, and were it a question of this passage alone we should prefer 'fundos'. But it is possible to take pecuo castruo together as 'pecuum capita', or else to assume that the word was also used for small animals, sheep, goats, etc., in contrast to pecuo, large animals, kine.

¹ With this meaning there is no nearer connection for *trutum* than Lith. *tvìrtas* 'firm', while as 'quartum' its explanation is simple (191, 4). Moreover the analogy of the Roman *quarta accusatio* affords a strong presumption in favor of 'quartum', even though the procedure is not precisely the same.

censors shall have proposed to take the census. And if any one fraudulently fails to come to the census, and is convicted of it, let him be scourged (?) in the assembly, under the magistracy of the praetor, in the presence of the people, and let the rest of his household, and all his property which is not rated, become public property without remuneration to him."

At Rome there was a formula census or lex censui censenda dicta. According to the lex Iulia municipalis (CIL. I 206) the censors are instructed to find out name, age, financial condition, etc., ex formula census, quae Romae ab eo, qui tum censum populi acturus erit, proposita erit (cf. poizad ligud etc. here). At Rome, too, each citizen had to appear in person (cf. suaepis censtom-en nei cebnust here).

The penalty at Rome for non-appearance at the census without sufficient excuse (cf. dolud mallud here) was death or slavery of the person and sale or confiscation of his property. Cf. Valer. Max. 6, 3, 4 et bona eius et ipsum vendidit and Livy 1, 44, 1 censu perfecto, quem maturaverat metu legis de incensis latae cum vinculorum minis mortisque, . . . The meaning of lamatir, l. 21, which occurs also in the Curse of Vibia (no. 19), is disputed, but 'caedatur' is more probable than 'veneat'. 1

5

"The practor, or if there shall be a prefect at Bantia after this, in case any one wishes to go to law with another before them, or to make a forcible seizure, as if judgment had been rendered, on these matters which are written of in these laws, shall not prevent one for more than the ten succeeding days. If any one contrary to this shall prevent, the fine shall be 1000 sesterces. And if any magistrate wishes to fix the fine he may do so, but only for a fine involving less than half the property shall it be permitted."

The construction is awkward. The subject of pruhipid (l. 25) is Pr. at the beginning, the clause suae... fust being thrown in parenthetically. Yet eizois refers to the prefect as well as to the praetor. With pru medicatud manim ascrum compare pro ioudicated n. [L.] manum iniect[i]o ested (CIL. IX 782).

¹ The translation 'veneat' (Bücheler) for the passage in the Vibia Curse was thought to receive some support from the presence of $\pi\epsilon\pi\rho\eta\mu\dot{\epsilon}\nu\sigma$ in the Cnidian Curses, but it is now recognized that this is not from $\pi\iota\pi\rho\dot{\alpha}\sigma\kappa\omega$, but from $\pi\iota\mu\rho\eta\mu\mu$, and means 'consumed with fever' (cf. Rh. M. 49, 39). Accepting the translation 'caedatur', lamatir may be connected with O.Bulg. lomiti 'break', Eng. lame and (colloquial) lam. Cf. Danielsson, Pauli's Altit. Stud. 3, 183.

6

"No one shall be practor or censor of Bantia unless he has been quaestor, nor shall any one be censor unless he has been practor. And if any one shall be practor, and , he shall not become a tribune of the people after this. And if any one shall be made tribune contrary to this, he shall be made so wrongfully."

This section treats of the order of magistrates, which here is quaestor—praetor—censor, while at Rome it is usually quaestor—censor—praetor, though sometimes the praetorship precedes the censorship as here; cf. Livy 41, 9, 11. Except for the first sentence, the text is so fragmentary that the precise meaning is entirely uncertain.

Inscriptions of Pompeii¹

3-13. Inscriptions on Public Works, and Dedications

Most of these belong to the second century B.C. None is later than the Social War, after which Oscan ceased to be used in official inscriptions; and, on the other hand, with the exception of no. 9, from a temple believed to belong to the third century, there is probably none earlier than 200 B.C. Within these limits there are no evidences of date beyond the forms of the letters, which show, for example, that no. 3 is one of the earliest of this period, no. 4 one of the latest. All of these inscriptions are now in the Naples Museum.

3. Road-makers' tablet, found near the Porta Stabiana. Conway no. 39, v. Pl. no. 28.

M. Suttius M. f. N. Pontius M. f. aediles hanc viam terminaverunt usque ad pontem Stabianum. Via terminata est perticis X. Iidem viam Pompeianam terminaverunt perticis III usque ad aedem Iovis Milichii. Has vias et viam Ioviam et Decurialem meddicis Pompeiani auspicio ab imo fecerunt, iidem aediles probaverunt.

¹ For topographical matters cf. especially Nissen, Pompejanische Studien, and Mau's Pompeii translated by Kelsey (references are to the second edition, 1902).

² iu[s]su impossible; here and in 1. 5 uncertain whether u or u, but see 53. a.

Cf. Nissen, Pomp. Stud., 531 ff., and Mau, Pompeii, 184.

The aediles laid out two roads, and these as well as two others they also constructed or repaired under the direction of the meddix of the city. road, leading out from the Stabian gate where the inscription was set up, they laid out at a certain width as far as the Stabian bridge. The street leading from the same point into the city, and called, from its importance, the Via Pompeiana (now known as the Strada Stabiana), they laid out at a certain width as far as the temple or precinct of Jupiter Milichius. The Via Iovia was doubtless named from a temple of Jupiter, and the Via Decurialis from some public building. The phrase viam terminare is not used in Latin, but the reference is clearly to the laying out of the road, that is, marking off its exact width, delimiting it (on the sides). Viass . . . imad-en uupsens 'made from the bottom up' corresponds to the Latin vias substruxerunt.

- 4. A tablet found on the site of what is believed to have been a palaestra. Conway no. 42, v. Pl. no. 29.

- 5 aiians trííbúm ekak kúmbennieis tanginud úpsannam deded, isidum prufatted.

V. Adiranus V. f. pecuniam quam iuventuti Pompeianae testamento dedit, ea pecunia

V. Viínikiís Mr. kvaísstur Púmp- V. Vinicius Mr. f. quaestor Pompeianus domum hanc conventus sententia faciendam dedit, idem probavit.

Cf. Nissen, Pomp. Stud., 168 ff.

The quaestor had this building constructed from the money which V. Adiranus left by will to the Pompeian vereiia. This was probably an association of young men devoted to athletic and military training like the Greek ephebes. The word is best explained as a derivative with suffix -eiio- (253, 2) from a *uero-'defense', containing the same root as O. veru 'portam', Goth. warjan 'ward off', etc. (15, 15), so that the original meaning would be 'defensive body' (cf. Germ. Landwehr); but the military side of the association may have become entirely subordinate at the time of this inscription.1

5. Inscribed under a sun-dial found at the Stabian baths. Conway no. 43, v. Pl. no. 30.

Mr. Atiniís Mr. kvaíss*t*ur eítiuvad múltasíkad

Ahvdiu Ni. akun. CXII

... Audio N. f. an. CXII

Formerly read ahvdium etc., no interpretation being attempted. But the mark of separation is clear. Apparently we have to do with an epitaph, the praenomen being lost. For the spelling of Ahvdiu see 61, 2, a, and 171, 3, a.

14-18. The Eituns Inscriptions

These are painted in red on the outside walls of houses standing near street-corners. For their interpretation cf. Nissen, Pomp. Stud., 497 ff.; Conway, I.F. 3, 85 ff.; Degering, Mitt. d. deutsch. archäol. Inst., röm. Abt., 13, 124 ff.; Mau, ibid. 14, 105 ff.; Mau, Pompeii, 240 ff. The usual and more probable view is that they are military notices, dating from the Social War, when Pompeii was besieged by Sulla (89 B.C.). It is suggested that many of the important streets were barricaded and that these inscriptions served as guides to the soldiers, pointing out the shortest available route to their respective stations along the city walls. Nos. 14-16 are near streets leading to the north wall, no. 17 is on a street leading to the western wall, while no. 18, unknown until 1897, is near what at the time of the earthquake was a blind alley, but which at an earlier period probably led through to the region of the "Triangular Forum" near the south wall. The veru Sarinu of nos. 14, 15, is not the Sarnian gate, but what is now known as the Herculanean gate. The buildings mentioned in no. 18 were probably in the Triangular Forum, the temple of Minerva being perhaps the well-known Doric temple at that place.

The phrase puf faamat means 'where (the officer named) is stationed' (for faamat: L. famulus, see 99, 2; the officer's home is his command). The amviannud (see 255, a) is not simply 'way', but 'way around, detour' (to avoid the barricaded streets; see above). For eftuns the common interpretation as Nom. Sg. 'iter' is the most difficult to justify grammatically. If the form is a noun at all it is Nom. Pl. of an -ōn- stem, meaning perhaps 'goers', that is 'patrols'. But the author is now inclined to favor the old interpretation 'eunto', there being no real difficulty in explaining the form as an Imperative (236, 2).

Cf. Bücheler, Rh. M. 33, 1 ff.; Bugge, Altitalische Studien (Christiania, 1878); Pascal, La tavola osca di esecrazione (Naples, 1894). On the curse-inscriptions in general cf. the convenient summary of contents by Battle, Proceed. Amer. Phil. Assoc. 26, LIV, and especially Wünsch, Defixionum tabellae Atticae (with additions in Rh. M. 55).

This inscription, as well as the following and also no. 40, belongs to a class of magical curses of which there are numerous examples among Greek and Latin inscriptions. Most of them, including the three Oscan, are written on thin lead plates, which were rolled up and placed in graves, in the belief that they gained access thus to the infernal deities invoked. They are written carelessly and often with intentional obscurity. Sometimes the natural order of words is changed, or a meaningless jumble of letters inserted. The curse is sometimes against an unknown person who has committed a wrong, but oftener one or more individuals are expressly named. Sometimes the cause of the curse is given, e.g. theft, cheating, assault, infidelity, a lawsuit, etc. The curse may be conditional, "if so-and-so does not (e.g. return a stolen object), may he . . . ". The introduction in Latin inscriptions is usually "mando", "commendo", "devoveo", "dedico", or a like word, followed by "diis inferis", "manibus inferis", or the name of some particular infernal deity. The punishments suggested are various, sometimes merely incapacity to eat, talk, or accomplish anything, but generally death with all sorts of tortures.

The person uttering the curse often takes the precaution to add a clause which shall avert from himself or herself any possible evil incidental to the curse. So frequently, in Greek inscriptions, $\dot{\epsilon}\mu o l$ $\delta \dot{\epsilon}$ $\delta \sigma \iota a$ or $\dot{\epsilon}\mu o l$ $\delta \dot{\epsilon}$ $\kappa a \theta a \rho \delta \nu$.

Owing to the fragmentary character of our inscription, no complete interpretation of it is possible, but the general trend is clear. The author of the curse is Vibia, and its object Pacius Clovatius, and incidentally his relatives, who are also her enemies (l. 2; for usurs inim malaks another interpretation worthy of consideration is 'mulieres et liberos', connecting usurs with L. uxor and malaks with L. mollis). The appeal is to Ceres Ultrix and her cohort of spirits (cf. ἀνιεροῖ... Δάματρι, Κούρα, Πλούτωνι, θεοῖς τοῖς παρὰ Δάματρι ἄπασι καὶ πάσαις, Collitz, 3536). In l. 1 pai probably introduces a relative clause of purpose, 'in order that she may direct her force and her cohort upon . . .'(?). The addition of the masculine pui is to be compared with Latin si deus si dea.

² Read Valaimas.

³ Read puklum.

The cause of the curse is probably a theft, the object stolen being perhaps a slave (l. 3). If the object is not returned (l. 4) Vibia wishes Pacius Clovatius to be scourged (for lamatir see p. 238) and tortured (precise meaning of kaispatar and krustatar uncertain; for the forms see 238, c). But if it is otherwise decreed, she will be satisfied if he is incapacitated. So ll. 6-9. "When he either undertakes to ——, may he be powerless, when he undertakes it, or if he wishes to accomplish anything, may he be unable to; nor shall (his relatives?) avail him at all by sacrifices to either the infernal deities or those of the upper regions. When he takes food, may he not be able to eat nor allay his hunger by anything which men eat. In every way may Pacius Clovatius be tortured." But no harm must come to Vibia, in whichever way the curse is effected (ll. 10 f.).

The entire left-hand margin of the plate is broken off, so that the amount that is missing from the end of each line can only be inferred from restorations. But Pascal's restoration of Pakim Kluvatiium after Ar[entikai in l. 3 is well-nigh certain. For wherever the text is complete Valaimas puklum (or its variant) is preceded by this name (so in ll. 2, 9, 10). Bücheler, who restored l. 3 differently, thought that not over ten or eleven letters were missing.

The inscription has no double consonants (note Keri = Kerri, no. 45), no i, and probably no \acute{u} (if it had \acute{v} , the dot is no longer visible). This, together with the style of the letters, shows that it is to be ranked among the earlier inscriptions, though not so old as no. 21 (contrast aisusis, l. 7, with luisarifs, no. 21), and there is no good reason for not dating it well back in the third century B.C.

20. On a lead plate found in the same place as the preceding. Now in the Naples Museum. Conway no. 131, v. Pl. no. 129.

5 Lúvikis Úhtavis

6 Statiis Gaviis nep fatíum nep deíkum pútíans. |

7 Lúvkis Úhtavis Núvellum Velliam |

8 nep deikum nep fatium pútiad |

9 nep memnim nep úlam sífeí heriiad. Stenius Clum. Verrius

Tr. — Verrius Plarius Bivellius Oppius Helvius Lucius Octavius

Statius Gavius nec fari nec

dicere possint.

Lucius Octavius Novellum Velliam (reddat. Si non,) nec dicere nec fari possit,

nec monumentum nec ollam sibi capiat.

With the phrase nep fatium nep deikum pútians compare nec loqui nec sermonare possit in a Latin curse (CIL. I 818). Since praenomina in -iis are entirely irregular (174), one is tempted to read ll. 3-6 in columns (as Conway does for ll. 3-4), that is, Plasis Úppiis, Lúvikis Statiis, etc. But against this is Lúvkis

Úntavis in l. 7. In ll. 7-8 Núvellum Velliam is without much doubt a proper name, but it is impossible to understand the construction without assuming an omission.

21-34. The Iovilae-Dedications

Cf. especially Bücheler, Rh. M. 39, 315 f., 43, 128 ff., 557 ff., 44, 321 ff., 45, 161 ff.; Conway, Ital. Dial. 101 ff.

Of these inscriptions, some are cut in blocks or thick slabs of coarse tufa (see photograph at end of book), while others are stamped on terra-cotta tiles. Many of the tiles bear the same inscription on both sides (nos. 23, 24, 25), and one of the tufa blocks is also inscribed on both sides (no. 31); while many of the tufa blocks belong in pairs which stood side by side, with inscriptions referring to the same dedicators and differing only in some details (nos. 27-28, 29-30, 32-33). Most of the inscriptions contain the word diuvila-, iúvila-, as the name of the object dedicated. This seems to be connected with the stem of L. *Iuppiter*, Iovis (257, 5), and in one inscription (no. 25) the iovilae are dedicated to Jupiter Flagius; there is also mention of *Ioviae* or Jupiter festivals (no. 29). It was, then, in all probability the technical name for some well-known and established Jupiter offering, - of just what nature we cannot tell. From the expression 'this iovila', 'these iovilae', we might assume that the stone was either itself the iovila, or else a pedestal for the iovila, which in that case would perhaps be a small statue. But the terra-cotta tiles could not be pedestals, and moreover the inscriptions on some of them seem to point to the iovilae as objects near by (nos. 21, 26).

The iovilae were dedicated by individuals (nos. 22, 25, 26, 32–33), by members of the same family (nos. 27–28), or of the same gens (nos. 21, 29–30, 34). Many of the inscriptions are accompanied by various devices which are undoubtedly heraldic emblems or coats of arms. Often the festivals or periods at which the iovilae were dedicated are mentioned. The púmperias were probably festivals of certain societies or family groups (cf. U. pumperias XII, II b 2; originally groups of five), and of these some were called Fisian and others Martian (nos. 27–28), apparently from the divinity in whose honor they were held (for Fiisfais cf. U. Fisio- beside Fiso '*Fiso, deo Fidio'). So too there were Fisian Ides (no. 21) and Martian Ides (no. 29). Other festivals are the Ioviae (no. 29, also 24) and, probably, the Vesulliae (nos. 26, 34). Some festivals were celebrated with a banquet, others with a sacrifice (contrast kerssnaís and sakriss, no. 29, and kerssnaísa, no. 27, with sakrasias, no. 28).

Most of these inscriptions, if not all, belong to the third century B.c. The mention of a meddix precludes a later date than the capture of Capua by the Romans in 211 B.c. Nos. 21-24, which lack the i and ú, belong to the beginning of the third or perhaps the end of the fourth century. No. 21 with its Dat.-Abl. Pl. luisarifs is one of the very earliest Oscan inscriptions, barring coin-legends. The other numbers have the letters i and ú, but they are used with great carelessness, and, moreover, the reading is often uncertain.

21. Conway no. 101, v. Pl. no. 130.

It is altogether probable that luisarifs is related to L. $l\bar{u}d\bar{o}$, $l\bar{u}sus$, as if L. * $l\bar{u}s\bar{a}ribus$, though this connection is rejected by Bücheler. To 'consecrate the iovila at the festival of the Fisian Ides, which is celebrated with games' is the same as to 'consecrate with games'. Cf. the consecration with sacrifices and with banquets in no. 29.

hae *iovilae Iovi Flagio

stahint.

stant.

Flagin is probably related to L. flagrō and so to be compared with such epithets of Jupiter as Fulgur, Fulgurator, Fulguralis, Fulmen, Fulminaris (Carter, de deorum Romanorum cognominibus, p. 44). Whether ner. is an abbreviation of a cognomen such as Nero, or of a title (cf. IIII ner 'quattuorvir') is uncertain, but the latter is more probable.

26. Conway no. 109. v. Pl. no. 134 a.

Tr. Vérrii Censsurineís ekas sorini hae iúvilas trís ehpeílatasset Vessulliaís. Fertalis staflatasset staflatasset Mi. Blússii (eís) Mi. m. t. Tr. Verrii Censouri Ce

Nessimas staiet Proximae stant veruis lúvkei. portae in luco.

It is not entirely clear whether fertalis is used substantively of certain ceremonies celebrated with cakes, being then in the Nom. Pl. and subject of a new sentence, or as an adjective agreeing with Vesulliais. The spelling -is, not -is, would be more surprising in the latter case than in the former (see 178, 7).

kersnaiias.

What kind of offerings or celebrations are meant by damsennias is not clear, though the word (with damuse, no. 24) is very likely connected with L. damium, name of a sacrifice to Bona Dea, who was called Damia and Damiatrix. Minive in b8 is perhaps an abbreviated form (Loc. Sg. for *minivei?) from a stem *miniuvú-, as if L. *minuo-, with iv for iuv (31, b). Was there a 'minor meddix' in contrast to the 'meddix tuticus'? The second letter of avt, a6, is e corrected to v. In echiianasúm, a5, beside vehiian., b7, the error is almost certainly in the second form, though some assume the opposite.

testes

omnes et eorum voluntates omnium omnes.

The akkatus inim trstus, correctly explained by Skutsch (B.B. 23, 100) as 'advocati et testes', shows that the occasion of this imprecation was a lawsuit. Cf. "nec illi hanc litem vincere possint..... sic nec advocati eorom eo[s def]endere (non) possint," from a Latin curse (Rh. M. 55, 241 ff.).

Húrz Dekmanniúís staít. Lucus *Decumaniis stat.

Cf. especially Mommsen, Unterit. Dial., 128 ff.

The inscription contains an inventory of the statues (A) and altars (B) in a sacred grove devoted to the worship of rural divinities. Kerríú-, which is used as an epithet of several of the divinities and of the grove itself, does not mean simply 'pertaining to Ceres', though it is translated 'Cerealis' for convenience. It must have a wider sense, 'pertaining to the powers of generation', such as were Ceres and Cerrus, and might also be translated (with Mommsen) 'Genialis', since *Genius* was originally, like *Cerrus*, a personification of the power of generation.

Corresponding to the Floralia mentioned in l. 20, we probably have in **Dekmanniúís** of l. 48 the name of a December festival, like the Roman Consualia or Saturnalia. The phrase alttreí pútereípíd akeneí, in case akeneí is 'year' (159, a), must mean 'in every other year' (see 200, 2, a). Otherwise it is

'at each of the two festivals', referring to the Floralia and the Decumania. In l. 1 statús pús set means '(the gods) who are set up, i.e. honored with statues'. Cf. Hor. Odes 4, 1, 20.

This is the earliest carefully written inscription of any size in the fully developed alphabet and, judging from the style of the letters, must be at least a century earlier than the Cippus Abellanus. We may take 250 B.C. as a conservative date.

Λππελλουνηι σακορο. Apollini sacra (est).

The text is made up from two fragments, and an early copy from which are supplied the letters at the beginning of the lines. The Mamertines were of Campanian origin. The last word is probably Nom. Sg. F. or Nom. Pl. N., 'is' or 'are' being understood. But possibly it is Nom. Sg. F. agreeing with $\tau\omega_{\mathcal{F}}\tau_{\mathcal{O}}$.

Ita fratres Atiedii decreverunt

Fratres Atiedii ita decreverunt plenariis *urnariis *auctura C. Cluvii T. f. In conventu

The translation is in the main that of Bücheler, but with not a few departures in the rendering of certain words.

¹ Table V is given first, as a convenient starting-point for the beginner; then VI, VII, and with these are given at the bottom of the page the parallel passages of I, which is an earlier and shorter version of the same material; then I in a continuous text, for the sake of greater convenience for reference; lastly II-IV. These last, especially III and IV, are so difficult that they might be omitted in a work of this kind, were it not for the convenience of having the complete texts for reference.

Brief Commentary 1 on the Iguvinian Tables

V

- V a 1-13. First-Decree. The flamen is to provide whatever is essential for the ceremony, and select the victims.
- Va2. urnasier. Probably 'Festival of the Urns'. The plenasier urnasier are distinguished from the sestentasiaru urnasiaru (III 2). But it is not certain whether the adjectives refer to the capacity of the vessels used, or to the time of year at which the festivals were held. In the latter case plenasier would refer to those occurring at the end of the year, and sestentasiaru to those occurring at the end of one sixth of the year, that is two months from the beginning.
- V a 2-3. uhtretie etc. The uhtur, as appears from III 4-8, was not a regular official like the kvestur or fratreks, but one selected for a special occasion, perhaps a sort of chairman.
- Va 4. eikvasese, perhaps related to L. aequus (29, a), but of obscure suffix-formation, probably means 'members of the brotherhood', equivalent to fratrus, or else, taken as Gen. Sg., denotes the brotherhood itself. In the Acta Arvalium we find both magister fratrum Arvalium and magister conlegi fratrum Arvalium. Cf. also eikvasatis III 24, 29.
- Va 7 ff. "Let him select the sacrificial victims, and when they are given over let him inspect them to see if (see 316) they (lit. any of them; see 266) are to be accepted, and in case of a triple offering let him inspect them in the country to see if they are to be accepted." puře teřte is best taken as an impersonal construction, puře being the conjunction 'quod, cum' (202, 1).
- V a 11. felsva, if connected with L. holus (149, b), might denote the 'garlands', or, more probably, the vegetables used in the case of 'fireless offerings' (263, 2), that is those which were not burnt-offerings.
 - V a 13. See 263, 1, 299, 7, footnote p. 236.

V a 14-b 7. Second Decree. Statement of the fees for the performance of certain rites (cf. CIL. VI 820). When the banquet of the brotherhood takes place (cf. the banquets of the Arval Brothers), the magister (fratreks) or quaestor (cf. magister collegi and quaestores collegi, CIL. III, p. 925) is to take a vote as to whether the banquet has been properly arranged, and, in case the majority of those present declare that it has not been properly arranged, a further vote must be taken to determine the penalty for the flamen.

¹ Hardly more than a summary of contents. For most points the student must rely on the translation and the glossary, with the references there given.

V a 15-16. kumnahkle and ukre may be Loc. Sg., or Dat. Sg. with the following verbs; eikvasese is Dat. Pl. with the following verbs, or Gen. Sg. (see note to l. 4) with ukre.

Va 17. apelust. This verb, as is clear from the succession of events here and in II b 27, is used of the initial ceremony in the sacrifice, preceding the laying of the victim upon the altar (purtitu l. 18). But it is not clear precisely what the ceremony referred to is, whether the formal devotion of the victim to the god, or its preparation, or even the actual slaughter (cf. inter caesa et porrecta, Cic. Att. 5, 18, 1), though this last gets no support from the use of L. impendō. The object expressed or understood is always an animal.¹

V a 20. subra spafu, see 308, b.

V a 23 ff. See 312, 316; on prufe si l. 27, see 307; on pepurkurent herifi b 5, 6, see 315.

V. b 8-18. Statement of contributions to be made regularly by certain *gentes* to the Atiedian brothers, and of portions of flesh to be awarded them by the brothers on the occasion of the decurial festivals. The two gentes mentioned here are among the ten (making up the decuria) enumerated in II b, and this passage is doubtless only the conclusion of a decree fixing the contributions and allotments of flesh for all ten, the main part being on one of the lost tables.

VI, VII a, and I

Purification of the Sacred Mount

VI a 1—VI b 47 = I a 1—I b 9

VI a 1-21 (I a 1-2). Introductory Auspices. The sacrifice is to be preceded by the taking of auspices (so in I and VI). Further details (only in VI): the formulae passed between the augur and flamen; warning against interruption; boundaries of the 'templum'; formula of announcement of the auspices; some general prescriptions applicable to all the following sacrifices.

VI a 6-7. It is quite possible that arsir is not 'alius', but Dat.-Abl. Pl. of arsie 'sancte', meaning 'ceremonies'. In this case the subject of mugatu as well as of andersistu is indefinite, and the use of pisi in l. 7 and not in l. 6 is due to the change from the passive impersonal construction. The meaning would

¹ In II b 10 vaputu is commonly regarded as the object of ampetu, but it is better to understand si 'suem' and take vaputu as Abl. Sg. used like vaputis II b 13 (293).

then be "One shall not make a noise or interrupt the ceremonies until the augur returns. If there is a noise or any one interrupts the ceremonies, it will make the sacrifice void".

VI a 8-11. In spite of the most exhaustive discussion and comparison of passages in Latin authors bearing on the same subject, as Livy 1, 18, 6-9, there is the widest divergence of opinion as to the relations of the points mentioned. It seems clear however that 1. 10 means not 'from the uppermost corner to the augural seats (and further) to the city limits', but 'from the uppermost corner at the augural seats to the city limits'. For 1. 11, see 288.

VI a 12-14. The words designate buildings and localities in the city and, naturally, are for the most part obscure.

VI a 20. See 315.

VI a 22-57 (I a 2-6). First Sacrifice. Sacrifice of three oxen to Jupiter Grabovius in front of the Trebulan gate. A sort of preamble or opening prayer is followed by three long prayers in identical words for each of the three offerings, and these again by a brief general prayer in conclusion. All these prayers are given only in VI. Then come prescriptions for various rites connected with the sacrifice (also in I). For the phraseology of the prayers compare those given by Cato, De Agric. 132, 134, 139, 141; e.g. Iuppiter, te hoc ferto ommovendo bonas preces precor, uti sies volens propitius mihi, domo, liberisque meis, familiaeque meae mactus hoc ferto.

VI a 22. sobocau suboco. The interpretation 'invoco invocationes' (279) is, in spite of the unusual order, far more probable than 'invocavi invoco', which involves various grammatical difficulties.

VI a 26. orer ose. The interpretation is very doubtful. It has been taken as 'his (donis) macte', going with the preceding, as 'illius anni' going with the following, and as 'cuiuspiam opere' 'by any one's work'. This last suggestion gives the easiest solution for ose (cf. osatu 'operator') and suits well the context (if, by any one's doings, through any one's fault, etc.). But one hesitates to separate orer from the pronominal forms uru, ures, etc., for which the meaning 'any' cannot be maintained. The translation given in the text adopts the comparison of ose with opere, but retains for orer the meaning 'illius' or in this case better 'huius'. This could only refer to the piaculum, and the phrase would be an anticipation of what is given at the close of the sentence, esu bue etc. But no great confidence in this view is entertained.

pir orto est. The Arval Brothers institute a piaculum if the trees of the sacred grove are struck by lightning.

VI a 27. pusei neip heritu. See 294, a.

VI a 30. For *castruo* the usual translation 'fundos' is in this passage more attractive than 'capita', but see footnote, p. 236 f.

VI a 32. See 322.

VI a 54. See 17, 17.

VI a 56. The mefa spefa (see 110, 3 with a), for which mefa alone is used in the older tables, may mean simply 'libation cake,' but more probably 'cake besprinkled (with salt?)'. Cf. L. mola salsa.

VI a 57. The meaning of the frequently recurring *uatuo ferine fetu* is very uncertain, the translation given representing only one of several possibilities (for *ferine* see 178, 6, note). Where the phrase is used, the victims are oxen, bull-calves, or boars.

VI a 58-59 (I a 7-10). Second Sacrifice. Sacrifice of three pregnant sows to Trebus Iovius behind the Trebulan gate. The prayers used in the first sacrifice are to be repeated.

The sacrifice is to be made persae, a word which probably means 'stretched on the ground' (cf. persom 'solum, fossam'), referring to the manner in which the victims were slain. It is used of sows, sucking pigs, heifers, and heifer-calves, also of a sheep, a boar, and a dog. An accompanying operation in such cases was the removal of the sopo 'under parts' (Grk. $\ddot{v}\pi\tau\iota a$), the mention of which is nearly always preceded by the statement that the sacrifice is to be persae (perae etc.). Cf. especially II a 22–32. But one act implies the other, and VI a 58–59 has only persae fetu, while the parallel I a 7–10 has only supa sumtu.

VI b 1-2 (I a 11-13). Third Sacrifice. Sacrifice of three oxen to Mars Grabovius in front of the Tesenacan gate. The prayers used in the first sacrifice are to be repeated.

VI b 3-18 (I a 14-19). Fourth Sacrifice. Sacrifice of three sucking pigs to Fisus Sancius behind the Tesenacan gate. Prayers of the first sacrifice to be repeated. Then comes an offering of cakes etc. to Fisovius Sancius, accompanied by a prayer differing in some phrases from those used before. This is followed by some further special ceremonies.

VI b 4. mandraclo etc. At Rome the flamen sacrificed to Fides with the right hand wrapped in white cloth (Livy 1, 21, 4; Serv. ad Aen. 1, 292). Some Umbrian coins of Tuder bear the device of a right hand wrapped with a band about the wrist and base of fingers, crossing on the back (see Lepsius, Insc. Umbricae et Oscae, table xxix). The difue doubtless refers to the manner of binding.

VI b 5. For sopo, see above, on VI a 58; for the use of postro, see 306.

VI b 11. See 325.

VI b 16. erus. This denotes a supplementary offering by which the ceremony was completed. Sometimes it is used alone, sometimes with a Genitive

designating the kind of offering to which it forms the complement, as here. Cf. especially VI b 38 ff. and VII a 43 ff. with notes. The word is probably from *aisus, related to O. aisusis 'sacrificiis', U. esono-, etc. See 112, a. The lack of rhotacism in the final may be attributed to the dissimilating influence of the preceding r.

VI b 17. uestisia sopa purome. See 306. The meaning of efurfatu (and furfant VI b 43) is uncertain, but some such sense as 'purify' or 'consecrate' is probable. There is no plausible etymology.

VI b 19-21 (I a 20-23). Fifth Sacrifice. Sacrifice of three oxen with white foreheads to Vovionus Grabovius in front of the Veian gate. Prayers of the first sacrifice to be repeated.

VI b 22-42 (I a 24-34). Sixth Sacrifice. Sacrifice of three lambs (?) to Tefer Iovius behind the Veian gate. Prayers of the first sacrifice to be repeated. Then follow supplementary offerings, consisting probably of cakes made in the form of animals, with the usual prayers and various accompanying rites with the cups, the trench, etc.

VI b 22. pelsana. The most probable explanation is that this word refers to the burial of the remains of the victims. It is used also of a ram (II a 6), a dog (II a 43), and a sheep (III 32). And in VI b 40 the offerings called pesondro are to be put in the trench and buried. For the form see 262, 1, a.

VI b 24 ff. pesondro sorsom. The first word, the etymology of which is wholly obscure, is most plausibly explained as referring to a symbolic offering, a sort of 'animal cracker' offered as a substitute for the animal itself. Cf. 'Et sciendum, in sacris simulata pro veris accipi. Unde cum de animalibus, quae difficile inveniuntur, est sacrificandum, de pane vel cera fiunt et pro veris accipiuntur, Serv. ad Aen. 2, 116; Tauri verbenaeque in commentario sacrorum significat ficta farinacea, Festus ed. Thewrewk, p. 548.

sorsom (suřum) is probably the same word as sorser 'suilli', V b 12, 17, while the contrasting staflare (VI b 37) refers to some animal kept in a stall, probably a sheep (cf. staflii uve I a 30 ¹). But the 'gingerbread pig' was the favorite form of the symbolic offering, so much so that in I a 30 suřum pesuntrum is used as a generic term equivalent to the simple pesondro of VI b 40, the kind of animal to be represented, in this case not a pig, being shown by the following adjectives. Similarly Acc. Pl. suřuf I a 33 is used substantively, equivalent to pesondro VI b 37, of the two kinds of cakes which had been mentioned, only one of which was in the form of a pig. The term sorsom is also found in its specific sense, as in VI b 37, 38; but in VI b 38, 39, we find also the extended form sorsalir, sorsalem, contrasted with staflarem.

¹ Aes stafli iuvesmik. To correct this to staflare esmik is entirely unnecessary, for staflii can be Acc. Sg. of a stem *stafliio-, like tertim, terti, from *tertio- (91, 1, 172).

The order of events in this, the most complicated series of ceremonies, is as follows.

Sacrifice of the lambs with the usual prayers.

Offering of the pesondro sorsom at the right foot, with accompanying libation.

Making trench for the cup.

Offering of the libation and the erus.

Prayer to Tefer Iovius.

Offering of the pesondro staftare at the left foot.

Making trench for the cup.

Prayer repeated.

Offering of the erus of the prosecta (of the lambs).

Offering of the erus of the libation accompanying the pesondro sorso, in the trench at the right foot, where the pesondro sorso was offered.

Offering of the libation accompanying the pesondro staftare at the left foot, and offering of its erus.

Placing the pesondro sorsalem in the trench.

Placing the pesondro staftare in the trench.

Throwing on the vessels used in connection with the pesondro.

Breaking of cakes with prayers.

VI b 43-44 (I b 1-4). Seventh Sacrifice. Sacrifice of three bull-calves to Mars Hodius at the Jovian temple (?). Prayers of the first sacrifice repeated.

VI b 45-46 (I b 4-7). Eighth Sacrifice. Sacrifice of three bull-calves to Hontus Cerrius at the temple (?) of Coredius. Prayers of the first sacrifice repeated.

VI b 47 (I b 7-9). Conclusion. Then shall the Mount be purified. In case of any omission the ceremony is vitiated and one must return to the Trebulan gate and begin anew.

The sentence suepo esome etc. is perfectly clear in its general meaning, but the exact construction is difficult. The most natural translation would be 'If this ceremony through any omission is vitiated, take auspices, etc.', taking anderuacose as a compound in the ablative. But there is no reasonable explanation of uacose as an ablative. This is rather to be taken (with Brugmann, Ber. sächs. Gesells. 1890, 217 ff.) as uacos-se 'vacatio sit', uacos being Nom. Sg. from *uakāti-s. uasetom-e will then be an adverbial phrase 'in vitiatum', like L. incassum. The corresponding phrase in I b vacetumise is probably to be separated vacetum-i se, the only difference being that the Present Subjunctive instead of the Future Indicative is used. But some take ise as a form of the verb 'to go'. esome esono (esumek esunu) is probably Gen. Pl., ander going with uacos, making a compound 'intervacatio'. But it has also been taken as Acc. Sg. governed by the following ander.

Lustration of the People VI b 48—VII a 54 = I b 10-45

Compare the description of the Roman Lustration, Dionys. Hal. Antiq. Rom. 4, 22, which we quote here from the Latin translation of the Didot edition as follows: Tunc igitur Tullius, censu perfecto, postquam iussit omnes cives cum armis adesse in campo, eorum qui sunt ante urbem maximo, et equites in turmas scripsit et pedites in acie collocavit, et milites levis armaturae in suis quosque centuriis, lustrationem instituit tauro, ariete, et hirco. Has hostias postquam ter circa exercitum circumagi iussit Marti, cui campus is sacer est, immolavit.

VI b 48 — VII a 2 (I b 10-23). Introductory Ceremonies. Expulsion of the Aliens. Circuit of the People. The auspices are taken in the same way as for the Purification of the Sacred Mount. After assuming the proper paraphernalia, the flamen and two assistants march with the victims by the Augural Way to the suburb Acedonia. Proclamation is made expelling the aliens. The Iguvinians are ordered to form in companies. The flamen and assistants march about them three times with the victims (bulls) and the fire. At the end of each circuit a prayer is made invoking misfortune upon the aliens and blessings upon the Iguvinians.

VI b 49-50. "One shall put on the fire. When it is carried to the ceremony, the one with the official staff shall carry the receptacle for the fire. He shall carry it lighted on his right shoulder." As stated in I b 20 the fire is carried about the people.

VI b 54-55 (I b 18). nosue ier, etc. There are widely different interpretations of this passage. Some take habe as meaning 'has possessions' and assume a concession to the metics or resident foreigners, who are to remove to a certain place and perform separate ceremonies. But in I b the proclamation begins with svepis habe, and it is more natural to take this as a threat than as a concession. The translation given in the text seems best suited to the two versions.

VI b 56 (I b 19-20). arsmahamo caterahamo. Compare the disposition of the Roman people in the passage quoted above.

VI b 60. For the verbs, some of which are obscure, see the Glossary.

VII a 3-5 (I b 24-26). Sacrifice of three bulls to Cerrus Martius at Fontuli, accompanied by the prayers used at the Trebulan gate.

VII a 5. The *erus* is not to be added until announcement is made of the third sacrifice. Cf. l. 43.

VII a 6-40 (I b 27-30). Sacrifice of three sows to Praestita Cerria at Rubinia, with the prayers used at the Trebulan gate. Ceremonies with the black vessels and the white vessels. With the former the prayer is to bring misfortune to the aliens, with the latter to avert misfortune from the Iguvinians. Offering to Fisovius Sancius accompanied by the prayer used behind the Tesenacan gate.

VII a 11, 27. atero clearly means ruin, though of uncertain etymology. Perhaps from *ap-terom (by 121), a 'rubbing away' (L. terō), and so 'destruction'. Cf. L. dēleō 'rub off, destroy'.

VII a 41-45 (I b 31-39). Sacrifice of three calves to Torra Cerria across the Sacred Way, with the prayers used at the Trebulan gate. When this is completed the order is given to add the *erus* at the place where the boars were sacrificed, then at Rubinia, then across the Sacred Way. Then they return to Rubinia and pray with the broken cakes, after which they come back to the Sacred Way and do the same.

VII a 46-51. Prayer to Torra Iovia in the same words as that made at the end of each circuit. To be repeated three times.

VII a 46. tefru-to. 'From (the place of) the burnt-offering', that is, the place where the sacrifice mentioned in l. 41 took place.

VII a 51-54 (I b 40-44). Pursuit and sacrifice of the heifers.

In the older version three heifers are let loose, one by the flamen, two by the assistants, and then caught and sacrificed. In VII more than three (apparently twelve; cf. VII b) are let loose and the first three caught are sacrificed.

VII b

Provision that the magister shall provide the victims.

VII b 1-2. seuacne... desenduf... ehiato. The general word for victims is used in the masculine (cf. ehiato) in spite of the fact that the heifers (iuengar) are meant. 'He shall furnish the twelve victims which are to be let out on the occasion of the pursuit of the heifers.'

II

II a 1-14. Sacrifices to be made in case of unfavorable auspices.

II a 1-2. naraklum vurtus. Cf. extorum mutatio, Cic. de div. 2, 35.

II a 3 f. Parallel with VI a 26 etc. See 128, a.

II a 15-43. Dog-sacrifice to Hontus Iovius. Hontus was doubtless a divinity of the lower world and the rite one of purification.

krematra, krematruf, II a 23, 26, probably denote some sort of vessels used in roasting the meat (cf. L. $crem\bar{o}$). But in II a 28 krematru as object of prusektu must be used of the meat itself.

II b. Sacrifices at the decurial festivals of the federated families. Ten *gentes* are named, some subdivided, making twenty families.

II b 14–15. sviseve evidently denotes some sort of vessel for holding liquids, so that connection with L. $s\bar{\imath}num$ is attractive. The latter might be from $*s(\underline{u})it$ -s-no- (cf. also situla), and the first part of U. sviseve might be from $*s\underline{u}it$ -s-, but the suffix is wholly obscure.

III-IV

The more private annual ceremonies of the brotherhood, like the festival of Dea Dia among the Arval brothers. Owing to the great number of technical terms not occurring elsewhere, the meaning of a considerable portion of these tables is obscure.

Relative Chronology of the Tables

The universally adopted numbering of the Tables is that of Lepsius, though opinions vary as to the correctness of this order for I-IV. The probability, however, is that these tables were actually inscribed in this order. For in the form of the letters III and IV occupy a position midway between I and II on the one side and V a-b 7 on the other. But, as some or all may be copies of older inscriptions, this does not necessarily mean the same order of composition. Judging by orthographical peculiarities there is some evidence that III and IV are

copies of inscriptions earlier than I and II, and that II a 15-end (dog-sacrifice) is earlier in composition than II a 1-14. Within I and II various divisions are to be noted, corresponding to subject-matter, namely I a-b 9 (Purification of Sacred Mount), I b 9-end (Lustration of People), II a 1-14 (offering in case of bad omens), II a 15-end (dog-sacrifice), II b (ceremonies of the Decurial Festivals). The order of composition is possibly, though by no means certainly, III-IV, II a 15-end, I a, b, II a 1-14, II b, V a-b 7, V b 8-end, VI, VII.

—gen.pl. [a]íttíúm, no. 153; 162, 1.

16, 1, **62**, **187**, 1, α.

Afaries 'Afarius', gent. 174.

Besides the abbreviations used elsewhere, note praen. = praenomen, and gent. = gentile.

² Alphabetical order as in Latin, but with k under c. ú is given under o; likewise $\mathbf{u} = \mathbf{\acute{u}}$, o, when forms with ú or o also occur, otherwise under u. \mathbf{v} is given after u, but consonantal u is given with \mathbf{v} , and au and $a\mathbf{v}$, ou and u, are treated as identical.

¹ The references with "no." refer to the numbers of the preceding collection. Where no number is given, the form is from some fragment not included in the collection. The references in black type are to the sections of the grammar. Where several inflectional forms are included under one heading, references for the particular forms, when given, are put after each, while the references to the word as a whole are put at the end of the article. But it is not intended, of course, to give references for each inflectional form, except in special cases. References inclosed in () refer to the particular form immediately preceding. Under compounds are sometimes given references to sections in which only the simplex is mentioned. And occasionally elsewhere reference is made to a section in which the word itself is not mentioned, but where parallel examples are given.

petiropert, petirupert 'quater', no. 214, 15. 34, 81, 100, 3, c, 150, 192, 2.1 petora 'quattuor'. "Petoritum et Gallicum vehiculum esse et nomen eius dictum esse existimant a numero IIII rotarum; alii Osce, quod hi quoque petora quattuor yocent, alii Graece, sed αlολικῶs dictum." Festus ed. Thewrewk, p. 250. 191, 4.

Pettieis, Pettieis 'Pettii', gen. sg., gent., nos. 27-28.

píd, pídum, see pís, *písum.

-pid '-que', indefinite particle. 201, 4.

¹ Mention should perhaps have been made of another view, which has been revived several times in recent years, namely that *-pert* is not to be compared with L. *-per* in *semper* etc., but with Skt. *-krt* in *sakft* 'once' etc. We still regard the comparison within the Italic as more probable.

Piíhiúí 'Pio', dat. sg., no. 45 40. 48, 83, a, 102, 2.

Piístiai 'Fidiae', dat. sg., no. 45 14, 42. 21.

pís, píd 'quis, quid'. Interrogative, nom. sg. m. pis, no. 55. Indefinite, nom. sg. m. pis, no. 2 (passim), pís, no. 30;—acc. sg. m. pim (phim), no. 2 25;—nom.-acc. sg. n. píd, no. 1 41, pid, no. 19 6. Indefinite Relative, nom. sg. m. pis, no. 2 8, 19;—dat. sg. m. piei, no. 2 7. 199.

pispis 'quisquis' (fragment); — pitpit 'quidquid'. "Pitpit Osce quicquid." Festus ed. Thewrewk, p. 263. 200, 1. *písum, pídum 'quisquam, quicquam'.

Acc. sg. n. pídum, no. 1 47, pidum, no. 19 7; — gen. sg. m. pieisum, no. 2 6. 199, 200, 1, 201, 5.

pl. in tr. pl. 'tribunus plebis', no. 2 29. Plasis 'Plarius', praen., no. 20.

púkkapíd 'quandoque', no. 1 52, pocapit, no. 2 8 (127, 1, a), [p]ocapit (Avellino fragment). 139, 1, 201, 4, 202, 13.

pod, conjunction, in pod . . . min[s] 'quominus', no. 2 10; 315; — suae. . . pod 'sive', no. 2 23, svai puh 'sive', no. 19 10, 11 (133, a). 190, 6, 202, 1. pui 'qui', nom. sg. m., no. 19 1; — nom. sg. f. pai, no. 1 34, pai, no. 19 1, pae, paei, no. 2 22; — nom.-acc. sg. n. púd, no. 1 12, 13, 14, 49, pod, no. 2 10; — gen. sg. m. púieh, no. 39; 61, 3, 64, b, 113, c, 199, b; — acc. sg. f. paam, no. 4, p]aam, no. 50, pam, no. 1 38; — abl. sg. f. poizad, no. 2 19; 199, d; — nom. pl. m. pús, no. 1 8, 45; — nom. pl. f. pas, nos. 27, 28, 31 a, b; — nom. pl. f.

pai, no. 1 15, pai, no. 19 9.

púiiu 'cuia', nom. sg. f., no. 55. 61, 3, 199, b. For púileh see pui.

poizad, see pui.

Púmpaiians 'Pompeianus', no. 4;—gen. sg. m. Púmpaiianeís, no. 3;—dat. sg. f. Púmpaiianaí, no. 4;—acc. sg. f. Púmpaiiana, no. 3. 61, 3, 253, 1.

*pompe 'quinque'. 37, 150 with a. púmperiais '*quincuriis', name of a festival, loc. pl., no. 30, púmperiais, nos. 27-28, abbr. púmpe., no. 32;—nom. pl. (or gen. sg.?) pumperias, no. 23 a, b;—nom. pl. púmper(i)as, no. 33. 37, 150, 191, 5, 251, 4, p. 247.

vehiian., see eehiianasúm.

Velliam 'Velliam', gent., no. 20, 169, 12.

Verehasiúi '*Versori'(?), no. 45 11, Verehasiú, no. 45 39 (171, 3, a). Cf. Διουρεί Γερσορεί, no. 64, and Grk. Ζεύς Τροπαΐος. 80, 1, 149.

vereiiai 'iuventuti'(?), no. 4;—gen. sg. vereias, no.61, vere*hias*(?), no. 30. 61, 3, 253, 2, p. 240.

veru 'portam', acc. pl. n., no. 15, ver., no. 14; dat. abl. pl. veruis, no. 26. 15, 15.

Vestirikiíúí 'Vestricio', dat. sg., no. 1 1. 81, 174, 246, 1, α , 256, 4.

Vesulliaís '*Vesulliis', probably the name of a festival, no. 26, Vesuliais, no. 34. 107, 3, p. 247.

Vesulliais '*Vesullieius', gent., no. 46. 176, 3, 253, 1.

Vezkei 'Vetusci'(?), no. 452,28. 256, 8. Vibiiai 'Vibiae', dat. sg., praen. (?), no. 193, 10.

Vibis 'Vibius', praen., nos. 37–38, Vifbis, no. 58; — abbr. V., nos. 4, 7, 8, 12, 14, 15, 17; — gen. sg., abbr. Vi., nos. 29, 30. 174.

Viínikiís 'Vinicius', gent., no. 4. 21, 174, 256, 4.

uincter 'convincitur', no. 2 21. 44, 143, 213, 3.

víú 'via', nom. sg., no. 1 56, víu, no. 3; — acc. sg. víam, nos. 1 33, 3, vía, no. 3; 109, 2;—loc. sg. víaí, no. 1 57; — acc. pl. víass, no. 3. 31, α, 101. Vírriis, Vírríiis 'Verrius', gent., no. 20;—gen. sg. Vírriieís, no. 26, Virriieís, no. 32;—gen. pl. Viriium, no. 34. 38, 2, 174, 176, 5.

Víteliú 'Italia', no. 79 a, Vítelliú also found. 5, 39, 6, 162, 1, 250, 2.

zicolom 'diem', no. 2 14, zico., no. 2 15;
—loc. sg. zicel[ei, no. 2 7;—abl. sg. ziculud, no. 2 16;—nom. or acc. pl. d]iſkúlús (fragment);—gen. pl. zicolom, no. 2 17; 268;—abl. pl. zicolois, no. 2 25. 81, 88, 4, 100, 3, c, 134, a, 249, 2.

UMBRIAN 1

a., abbr., 'asses', v b 10 etc., vii b 4.
aanfehtaf 'infectas, non coctas' (?),
ii a 33. 73, a, 263, 2.

abrof 'apros', vii a 3, apruf, i b 24, 33. 157, 1, 171, 11, a.

abrunu 'aprum', ii a 11; — acc. pl. abrons, vii a 43. 157, 1, 181, b. Acesoniam-e 'in Acedoniam' (Aquiloniam?), a district of Iguvium, vi b 52 (131, b), Akeřuniam-em, i b 16; — loc. sg. Acersoniem, vii a 52 (109, 1), Akeřunie, i b 43. 54, 144, a. See under O. Akudunniad.

acnu 'annos' (?), acc. pl. n., v b s etc. **159**, a, **299**, 7.

akrutu, see ager.

adro 'atra,' acc. pl. n., vii a 25, atru, i b 29; — dat.-abl. adrir, vii a 9 etc., adrer, vii a 18. 157, 2.

afero, aferum, see anferener.

afiktu 'infigito', i a 31. See an- and fiktu.

ager 'ager', no. 84; 91, 2, 117; — gen. sg. agre, v b 9, 14; — abl. sg. akru-tu, v a 9. 32, 1.

aha-, ah-, a- 'ab-'. 77, 2, 264, 1.
ahatripursatu'*abstripodato, tripodato',
vii a 23, 36, atripursatu, vi b 16, atropusatu, vi b 36 (86, 7), ahtrepuřatu,
ii a 24 etc., atrepuřatu, ii b 18. 51, a,
264, 1.

ahauendu 'avertito', vii a 27. Cf. 16, 21, 161, 264, 1.

ahesnes 'ahenis', iii 18, 19. 83, 114, 255, 3.

ahtim-em 'ad caerimonium' (?), i b 12; — ahtis-per 'pro caerimoniis', iii 24, 29. **247**, 1, a.

Ahtu '*Actui, deo Agonio', ii a 10, 11. 184, 251, 6.

aitu 'agito', imperat. sg., vi b 18, vii a 40, 45, aitu, i b 29, 37, pl. aituta, iii 13. 143.

aiu 'agitationes, disturbances'(?), ii a 4. 147, 3.

alfu 'alba', acc. pl. n., i b 29; — dat.abl. pl. *alfir*, vii a 25, 26, *alfer*, vii a 32, 34. **124**.

am-, an-, a-, ambr-, ampr-, apr- 'amb-'. 89, 1, 161 with a.

¹ Alphabetical order as in Latin, but with k under c; $\check{\mathbf{r}}$, rs, after r: ς , \mathring{s} , after s. V for o is put under o when forms with o are also found, otherwise under u.

amboltu 'ambulato', vi b 52. 161, 213, 1, a.

ambrefurent, ambretuto, see amprehtu. amparitu 'conlocato, set up', imperat., iii 14; — imperat. pass. amparihmu 'surgito, raise oneself', ii a 42. 215, 1, 264, 1, 308, b.

ampentu 'impendito' (see p. 302), imperat. sg., ii a 20, iii 23, ampetu, ii b 10, 11, apentu iii 27 (cf. 108, 1, 135); — fut. 2 sg. anpenes, ii b 27 (n from nd by 135); — fut. perf. 2 sg. apelus, ii b 27, 3 sg. apelust, v a 17. 107, 3, 135, 226, 264, 1.

ampeřia, a portion of the victim, perhaps the 'part about the foot', abl.sg., ii a 29. 161, a.

amprehtu 'ambito', imperat. sg., i b 21,
apretu, i b 20 (cf:108,1), pl. ambretuto,
vi b 56, 63, 64; — fut. perf. 2 sg. amprefuus, i b 20, 3 pl. ambrefurent,
vi b 56; 227. 161, 217, 4.

an-, a- 'in-', verbal prefix. 264, 1.
an-, a- 'in-', negative prefix. 98,
263, 2.

andendu 'intendito, imponito', vii a 25, antentu, ii a 20, iii 15 etc., iv 21, 27, atentu, ii b 28. 135, 156, 264, 1.

ander-, anter-'inter-'. 98, c, 156, 301, 1.

andersistu '*intersidito, intervenito', vi a 6; 114; — fut. perf. 3 sg. andersesust, vi a 7. 222, note.

anderuacose '*intervacatio, intermissio sit'(?), vi b 47, antervakaze, i b 8. 35, 247, 1, a, p. 306.

anderuomu 'inter----', abl. sg., vi b

andirsafust circumtulerit, lustraverit, vii a 46, andersafust, vii b 3, ateřafust, i b 40. 131, 161, a, 164, a, 210, b, 217, 227.

anferener 'circumferendi, lustrandi', vi a 19; 135; — infin. afero, vi b 48,

aferum, i b 10; 108, 1. 161, a, 164, a, 217.

anglaf 'oscines', acc. pl., vi a 5, angla, vi a 1 etc., ancla, vi a 18;—nom. pl. anclar, vi a 16. 16, 12, 155, 264, 1. anglom-e 'ad angulum', vi a 9:—an-

anglom-e 'ad angulum', vi a 9; — anglu-to 'ab angulo', vi a 8, 10. 155.

anhostatu 'non hastatos', vi b 60, anostatu, vii a 48; — dat. pl. anhostatir, vii a 28, 50, anostatir, vi b 62, vii a 13, 15. 98, 99, 3, 140, a, 263, 2.

anouihimu 'induitor', vi b 49. 16, 13, 215, 1, 237, 264, 1.

anpenes, see ampentu.

anseriato 'observatum', supine, vi a 6, aseriato, vi a 1, 6, anzeriatu, i b 10; 57, 242; — pres. subj. 1 sg. aseriaia, vi a 2; — pres. imperat. sg. aserio, vi a 4; 235; — fut. imperat. sg. aseriatu, vi b 47, azeriatu, i b 8; — perf. pass. partic. abl. pl. aseriater, vi a 1, anzeriates, i a 1, ii a 17. 102, 4, 108, 1, 110, 1, 210, b, 264, 1.

anstintu 'distinguito', iii 20, astintu, iii 18, 19. 146, 153, 264, 1.

anstiplatu 'stipulator', vi a 3. 264, 1. ancif, in pustin ancif, probably 'in vices, by turns', ii a 25. 144, 299, 7.

ansihitu 'non cinctos', vi b 59, ansihitu, vii a 48; — dat. pl. ansihitir, vi b 62, vii a 13 etc. 73, 144, 263, 2.

antakres 'integris', abl. pl., ii a 42, antakre, i b 36, 38. Always in the phrase antakres kumates 'with the whole and the broken (cakes?)'. 32, 3, 263, 2, 325.

antentu, see andendu.

anter, see ander.

antermenzaru 'intermenstruarum', ii a 16. 110, 1.

anterafust, see andirsafust.

anzeria-, see anseriato.

ape 'cum, ubi' (always temporal), vi b 5 etc. (17 times), ape, i b 34 etc.

(8 times), api, i a 27, 30, 33, ap, iii 20, iv 31, appei, vii b 3. 16, 14, 139, 1, 202, 8.

apehtre 'ab extra, extrinsecus', adv., iv 15. 142, 188, 2, 263, 3, a, 264, 1. apelust, apentu, see ampentu.

aplenia 'impleta', acc. pl. n., ii a 23;—dat.-abl. pl. aplenies, ii a 23. 161, a. apretu, see amprehtu.

apruf, see abrof.

ar-, ar-'ad-', see under ars-, ař-.
arnipo 'donec, until', vi b 25, 41. 202, 10, 319.

arçlataf 'arculatas, circular cakes', iv 22. Cf. "arculata dicebantur circuli qui ex farina in sacrificiis fiebant." Festus ed. Thewrewk, p. 12. 154, 249, 1.

arvam-en 'in arvum', iii 11;—loc. sg. arven, iii 13.

arvia '*arvia, frumenta, fruits of the field', acc. pl. n., i a 3 etc. (7 times), arviu, i a 12 etc. (12 times), aruvia, iii 31 (31, b), aruio, vi a 56 etc. (12 times); — abl. pl. arves, i a 6 etc. (11 times), arvis, i a 27, i b 7 (173, 5).
31, a, 102, 1.

ars-, ař- 'ad-'. 132 with a, 299, 1. -ař, -a 'ad'. 133, b, 299, 1.

ařkani 'cantum', iv 28. 32, 3, 250, 1. ařepes 'adipibus, fatty portions', abl. pl., i a 6 etc., ařipes, i b 7, ařpes, i a 13 (132), ařeper, i b 30, 33, ařiper, i a 27, ařepe, i b 26, 44, ii a 7. An o- or ā-stem, not a consonant-stem as in Latin. Occurs always in a phrase with following arves (see 325), hence sometimes with final r even in Old Umbrian (cf. treatment before enclitics, 113, a).

arsfertur '*adfertor, flamen', vi a 8, arfertur, vi a 3, vii b 3, ařfertur, i b 41, ii a 16, v a 3, 10; — data sg. arsferture, vi a 2, ařferture, v b 3, 5, 6; — acc. sg. arsferturo, vi a 17. **132** with a, **246**, 1.

arsie 'sancte', voc. sg., vi a 24, vi b 8, 27; — gen. sg. arsier, vi a 24, vi b 27, asier, vi b 8. Probably from the same root as arsmor 'ritus'.

arsir 'alius'(?), vi a 6, 7. 106, α, p. 302.
arsmahamo 'ordinamini', vi b 56, armamu, i b 19 (132, α). 16, 15, 237, α, 251, 3.

arsmatiam 'ritualem, official', vi b 49, 50, arsmatia, vi a 19 etc. 16, 15, 251, 3. arsmor 'ritus', nom. pl., vi a 26 etc. (4 times), 171, 13; — acc. pl. arsmo, vi a 30 etc. (10 times), asmo, vi a 49. 16, 15, 251, 3.

Ařmune '*Admono' or '*Admoni', epithet of Jupiter, dat. sg., ii b 7. 247, 2, a. Perhaps from the same root as arsmor.

ařpeltu 'adpellito, admoveto', ii a 32, ii b 19, iv 8. 132.

ařputrati 'arbitratu', v a 12. 59,251,6. arsueitu 'advehito, addito', vi a 56 etc. (11 times), ařveitu, ii a 12 etc. (5 times), arueitu, vi b 23, arveitu, i b 6 (132, a), aveitu, iv 1. 132 with a, 143, 160.

asa 'ara', abl. sg., vi a 9, asa, iii 23, iv 16, e-asa 'ex ara', ii a 38, asa-ku 'apud aram', ii a 39, 43; — asam-ař 'ad aram', iv 6, asam-a, ii a 39, iv 16, asam-e 'ad aram', vi a 10 (cf. 301, 2); — dat. sg. ase, ii a 19, iii 22. 33, 112, a.

aseria-, see anseriato.

aseçeta 'non secta', abl. sg., ii a 29;—abl. pl. aseçetes, iv 7. 211, 263, 2. asiane, meaning uncertain, probably loc. sg., i a 25.

asier, asmo, see ars-.

asnata 'non umecta', acc. pl. n., ii a 19, asnatu, ii a 34; — abl. pl. asnates, ii a 37, iv 9. 114, 263, 2, 325. aso 'arsum', perf. pass. partic., vi b 50. **242**, a, **244**, 1, c.

astintu, see anstintu.

Acetus 'dis Ancitibus', ii a 14.

atentu, see andendu.

atero 'malum, ruin', acc. sg. n., vii a 11, 27. p. 308.

ateřafust, see andirsafust.

Atiersir 'Atiedius', adj., vii b 3; — dat. sg. n. Atiieřie, v a 16, ii a 1, 3; — nom. pl. Atiersiur, v b 11, 16, Atiieřiur, v a 1, 14; — gen. pl. Atiersio, vii b 2, Atiieřiu, ii a 21, v a 12, etc.; — dat.-abl. pl. Atiersier, vii b 1, Atiersir, v b 8, 14, Atiieřies, iii 24, Atiieřier, v a 4, 16 (or gen. sg.?), Atiieřie, ii a 2, iii 29. 172, 260, 2.

Atiieřate 'Atiedati', dat. sg., ii b 2. 259, 3.

atripursatu, atropusatu, etc., see aha-tripursatu.

atru, see adro.

auie 'augurio', dat. sg., vi b 11.248, 3, α.

aviekate 'auspicatae', dat. sg., ii a 1, 3. 248, 3, α .

auiecla 'augurali', abl. sg. f., vi b 52, aviekla, i b 14;—acc. pl. m. auiehclu, vi a 10, auieclu, vi b 51, aviekluf-e, i b 14;—abl. pl. auiehcleir, vi a 9, auieclir, vi a 12, 13. 248, 3, a.

auif 'avis', acc. pl., vi b 47, 48, aueif, vi a 4, 18, auuei, vi a 3 (24, a), avif, i b 8, avef, i b 10; — abl. pl. aueis, vi a 1 (29), avis, ii a 16, aves, i a 1. 101. auirseto 'non visum', vi a 28 etc., vi b 30. 244, 4, 263, 2.

azeriatu, see anseriato.

benus 'veneris', fut. perf. 2 sg., ii b 16, 3 sg. benust, vi b 53, 3 pl. benurent, vi b 57, benurent, v a 25, 28, v b 5; 224; — fut. perf. pass. benuso 'véntum erit', vi b 64, 65, vii a 2; 238, 2;

— fut. 2 sg. menes, i b 15; 125, 2, a, 164, a. 151.

berva 'verua', ii a 26, 33; — abl. pl. berus, ii a 23, 35. **151**.

bio 'sacellum' (?), no. 83. Cf. Pael. biam. Etym. uncertain.

bum 'bovem', ii a 5; — abl. sg. bue, vi a 25 etc.; — acc. pl. buf, vi a 22, vi b 1, 19, buf, i a 3, 11, 20; — gen. pl. buo, vi a 54. 54, 151, 183 with b.

-c, -k, pronom. enclitic, 201, 1.

cabriner 'caprini', gen. sg., v b 12, 17. 157, 1, 255, 5.

kabru 'caprum', ii b 17, kaprum, ii b 1, kapru, ii b 10;— gen. sg. kapres, ii b 12. 157, 1.

calersu 'cal(l)idos, with a white forehead', vi b 19, kaleřuf, i a 20. 260, 1.

kanetu 'canito', iv 29. 88, 1, 141.

capirse 'capidi', dat. sg., vi b 24, 37, kapiře, i a 29, 32, ii a 8; — acc. sg. capirso, vi b 25; — abl. sg. kapiře, ii a 34, 41; — acc. pl. capif, vi b 18, vii a 39, 45 (139, 1), kapi, i b 29, 37, kapiř, i a 18; 139, 1, 178, 10; — abl. pl. kapiřus, ii a 33, iv 5.

kartu 'distribuito', ii a 23. 17, 3.

karu 'pars', v a 24, 27, v b 4; — dat. sg.
karne 'carni', ii a 1, 3; — abl. sg.
karne 'carne', ii a 30; — abl. pl. karnus 'carnibus', iv 7.
17, 3, 97, 181 with c.

carsitu 'calato, appellato', imperat., vi a 17, vii a 43, kařetu, i b 33, kařitu, iii 21. 106, 212, b.

carsom-e, name of some building or locality at Iguvium, vi a 13, 14. Etym. uncertain.

Casiler '*Casili', gen. sg., v b 14.

Casilos '*Casilas', nom. sg., v b 13; — dat. sg. Casilate, v b 16, Kaselate, ii b 6. 35, 259, 3.

Kastruçiie ** Castrucii', gen. sg., gent., v a 3. 174, 256, 5.

castruo 'capita'(?), acc. pl., vi a 30 etc. (11 times), kastruvuf, v a 13, 18, kastruvu, v a 20, 22. 17, 2, 32, 1, 138, 171, 13, 248, 4, a, ftn. p. 236 f.

katel 'catulus', ii a 43; — gen. sg. katles, ii a 22, 27, katle, ii a 15; — acc. sg. katlu, ii a 18, 20, 29. 88, 4. caterahamo '*catervamini, form in troops,' vi b 56, kateramu, i b 20.

102, 4, 237, a.

kazi, iii 16, 18, meaning and etym. uncertain.

kebu 'cibo', iv 23. 123, 144, α .

cehefi 'accensum sit'(?), perf. subj. pass.
3 sg., vi a 20. 144, a, 227, 238, 2,
239.

cisterno 'cisterna', nom. sg., no. 83.
Clauerniur '*Clavernii', nom. pl., v b 8;
dat. pl. Clauerni, v b 10, Klaverniie, ii b 3. 173, 3.

klavlaf 'clunis', acc. pl., ii a 33; — abl. pl. klavles, ii a 36, iv 11. From *klāuelā- (cf. L. clāva, clāvola), by 88, 4.

kletram 'lecticam', iii 13; — abl. sg. kletra, iii 13, iv 24; — dat. sg. kletre, iii 14. 248, 4.

Kluviier 'Cluvii', gen. sg., gent., v a 15. 174.

com, -co(m), -ku(m) 'cum', prepos. 293 with a.

com-, co-, ku-'con-'. 300, 2.

combifiatu 'nuntiato, mandato', imperat. sg.; vi a 17 etc. (5 times), kumpifiatu, i b 14, kupifiatu, i b 35 (108, 1); — pres. subj. 2 sg. kupifiaia, i b 35; — perf. subj. 3 sg. combifiansi, vi b 52; 229; — fut. perf. 3 sg. combifiansiust, vi b 49, combifiansiust, vi b 52, combifiansust, vi a 5; 229. 16, 16, 86, 7, 136, 161.

comohota 'commota, brought, offered', abl. sg., vi a 54. 17, 17, 244, 4. a.

comoltu 'commolito, break in pieces' (cakes), imperat., vi b 17, 41, vii a 39, 44, 45, kumaltu, ii a 9, 41, iv 28, kumultu, i a 34; — perf. pass. partic. abl. pl. comatir 'commolitis', vi b 17, 41, vii a 39, 44, 45, kumates, i a 34, ii a 42, iv a 29, kumate, i b 37, 38, ii a 10. 97, 105, 2.

conegos 'genu nixus', vi b 5, 16, vii a 37, kunikaz, iv 15, 18, 20. **35**, **146**, b, **153**, b.

couertu 'revertito', imperat., vi b 47, vii a 44, 45, kuvertu, i b 9, 36, 38, ii a 39;—fut. perf. 2 sg. kuvurtus, i b 11, 3 sg. couortus, vii a 39, courtust, vi a 6(51); 224;—fut. perf. pass. couortuso, vi b 64; 238, 2. 17, 13, 97, 101, 300, 2.

Crabouie, Krapuvi, see Grabouio-.

krematra '*crematra', acc. pl. n., ii a 23, krematru, ii a 28, krematruf, ii a 26; 171, 13. 248, 4, p. 309.

cringatro 'cinctum', a sort of band worn about the shoulder as a token of office, acc. sg., vi b 49, krenkatrum, i b 11, krikatru, ii b 27, 29. 39, 3, 161.

Cubrar' Bonae', gen. sg., name of a goddess, no. 83. Cf. "Ciprum sabine bonum", Varro L. L. 5, 159. From the root of L. cupiō (br from pr by 157, 1).

kukehes 'incendet, light up'(?), fut. 3 sg., iii 21. 144, a.

ku(m), see com.

kumaltu etc., see comoltu.

kumiaf, see gomia.

kumnakle 'in conventu', loc. sg., iii 7, 8, kumnahkle, v a 15. (Some prefer the dat. in v a 15, iii 7, and the gen. in iii 8.) 15, 4, 248, 3.

kumne 'comitio', loc. sg., i b 41. 15, 4, 107, 2 with ftn., 251, 2.

kunikaz, see conegos.

kupifiatu etc., see combifiatu.

kuraia 'curet', pres. subj., v a 5; — perf. pass. part. kuratu, v a 24, 26, 29. 67, 1, 112, 210, 1, 262, 1.

Kureiate '*Curiati', dat. sg., ii b 3. Cf. 259, 3.

Kureties, see Coredier.

curnaco 'cornicem', vi a 2 etc.; — abl. sg. curnase, vi a 1; 144. 51, 256, 6.

kurçlasiu '*circulario, ultimo' (i.e. 'that which completes the circle', and so 'last'?), abl. sg., ii a 17. 97, 295.

kutef 'murmurans, speaking low', i a 6 etc., kutep, i b 3 (25, a). 262, 2, 306.

kuveitu 'convehito, congerito', ii a 32, 40. 143, 160, 300, 2.

kuvurtus, see coucrtu.

kvestretie 'quaestura', abl. sg., i b 45, ii a 44. **246**, 1, a, **251**, 1.

kvestur 'quaestor', v a 23, v b 2. 21,63.

daetom 'delictum', vi a 28 etc., vi b 30. 300, 3.

Dei, see Di.

deitu 'dicito', vi b 56 etc., teitu, ii a 26 etc.; 143;—fut. perf. 3 sg. dersicust, vi b 63, 3 pl. dersicurent, vi b 62. 45, 95, 223.

dequrier 'decuriis', festival of the decuriae, v b 11, 16, tekuries, ii b 1. 26, 191, 10, a, 251, 4.

dersa, see dirsa.

dersecor 'debiti', vi a 26 etc., vi b 29; 171, 13. Probably from *de-deco-(L. decet).

dersicust, dersicurent, see deitu.

dersua 'prosperam', vi a 2 etc., desua, vi b 51, 52, tesvam, i b 13. 132, b, 258, 2.

desenduf 'duodecim', acc. pl., vii b 2. 144, 191, 10, 12, 263, 3.

destram-e 'in dextram', vi b 49;—loc. sg. in. destre, vi b 50, testre e, ii b 27, 28;—loc. sg. f. destre, vi b 4;—destru-co 'ad dextrum', vi b 24, 38, testru-ku, i a 29;—adv. testru sese 'dextrorsum', iii 23, iv 15; 190, 2, 307. 36, 1, 89, 1, 145, 1, 188, 2.

deueia 'divinam', vi a 10; — abl. sg. deueia, vi a 9. 253, 2.

Di' Iuppiter', voc. sg., vi a 25 etc. (29 times), Dei, vi a 26, 27; — acc. sg.
Dei 'Iovem', vi a 23, 24, 25. 183 with a.

dia 'det, faciat', vi a 20. 102, 3.

difue 'bifidum', acc. sg. n., vi b 4. 102, 3, 173, 1, 191, 2, a, 263, 1.

dirsa'det', pres. subj. 3 sg., v b 13, dersa, vii a 43, 44, teřa, i b 34 etc., 3 pl. dirsans, v b 11, 16, dirsas, v b 8; 45, 131, 213, 4;—imperat. dirstu, vi b 17, 38, 39, teřtu, ii a 40 (132), tertu, iv 28 (132, a), ditu, vi b 10, 16, 25, vii a 38, titu, i a 33, tetu, ii a 9, ii b 21; 132 with note;—perf. 3 sg. dede, no. 82; 131, c, 223;—fut. perf. 3 sg. dirsust, vii a 43, teřust, i b 34; 223;—pres. pass. 3 sg. teřte, v a 7; 132, 238, 1.

disleralinsust 'inritum fecerit', fut. perf., vi a 7. 114, 229, 262, 3, 264, 1.

ditu, see dirsa.

dunum 'donum', no. 82, also dunu. 107, 1, 131, c, 251, 2.

dur 'duo', nom. m., vi b 50, vii a 46; 54, 82, 2;—acc. f. tuf, i b 41;—acc. n. tuva, ii a 27, iii 32, 34;—dat.-abl. duir, v b 10, 15, tuves, iii 19, tuver-e, ii a 33; 31, b. 191, 2.

dupla 'binas', acc. pl. f., vi b 18;—abl. pl. m. tupler, va 19. 191, 2, a, 192, 1.

dupursus 'bipedibus', vi b 10. 54, 94,
191, 2, a, 263, 1.
duti 'iterum', adv., vi b 63. 190, 5,
191, 2.

e 'ex', see ehe.
-e 'in', see -en.
-e, -ei, pronom. enclitic. 201, 3.
eam, eaf, see erec.

ebetraf-e 'in exitus', vi a 12, hebetafe, vi b 53 (r probably omitted by mistake). 149, a.

-ec, -ek, pronom. enclitic. 201, 2. ecla 'omni', abl. sg. f., vii a 11, 27. Etym. uncertain.

ekvine, loc. sg., ii a 13. 141, a. eest, eetu, see etu.

ef 'ibi, tum ibi', adv., vi a 4. 195, f.efurfatu 'expurgato'(?), vi b 17, vii a 38.p. 305.

ehe 'ex', vi b 54, e-asa 'ex ara', ii a 38. 300, 4.

ehe-, e- 'ex-'. 77, 1, 300, 4.

eheturstahamu 'exterminato, expellito', vi b 55, eturstahmu, vi b 53, etuřstamu, i b 16. 16, 20, 77, 1, 131, a, 237, 262, 1.

ehiato 'emissos', vii b 2. **149**, **171**, 11, a, p. 308.

ehvelklu 'sententiam' (ehvelklu feia 'take a vote'), va 23, vb 1. 36, 2, 248, 3.

ehueltu 'iubeto', vi a 2. 15, 1, 217. eikvasatis 'collegialibus'(?), iii 24, 29. 29, a.

eikvasese 'collegis'(?), dat. pl. (or gen. sg. 'collegii'?) v a 4, 16. **29**, a, p. 301. eine, see enem.

eiscurent 'arcessierint', v b 10, 15. **29**, a, **213**, 5, **224**.

eitipes 'decreverunt', va 2, 14. 84, 149, α, 218, 264, 2.

emantur 'accipiantur', va 8, emantu, va 10; — emps 'emptus', no.84. 17.9.

en-. 301, 2.

-en, -em, -e'in'. 109, 1, 301, 2. endendu'intendito, imponito', vi b 40.

49, ententu, i b 12, iii 15; 135, 156; — fut. perf. 2 sg. entelus, i b 12, 3 sg. entelust, vi b 50; 107, 3, 135, 226.

enem 'tum, deinde', vii a 44, ene, i b 35, eine, vi a 10, 11. 202, 16.

enetu 'inito', vi a 1, enetu, i a 1.

enom 'tum', vi b 38 etc. (16 times), eno, vi b 16 etc. (9 times), ennom, vi b 51 etc. (5 times), enno, vii a 38, enu, i b 36 etc. (6 times); — enuk, i a 30 etc. (3 times), inuk, i b 7 etc. (7 times), inumk, iv 23; — enumek, i b 11 etc. (7 times), inumek, iii 9 etc. (13 times). 190, 5, 202, 16.

erec 'is', nom. sg. m., vii b 1, erek, v a 11, ere, vi b 50, ere, v a 4 (201, 1); nom.-acc. sg. n. erse 'id' (201, 1), via 8 (adv. 'tum', via 6), eřek, ia 30, v a 26 (adv. 'tum', iii 33, 35, iv 3, 21, 32); - gen. sg. m. erer 'eius', vi a 23 etc. (34 times), irer, vi a 25, erer-ek, iii 32; — gen. sg. f. erar, vi a 23 etc. (41 times); — acc. sg. f. eam, vi b 16, 24; — abl. sg. m. n. eru-com, vi b 50, eru-ku, iii 31 (eruk, adv., 'illic', iii 14); — abl. sg. f. erak, iii 12; — gen. pl. erom, vii a 14, 50, ero, vi b 62, vii a 13, 28, eru, v a 8 (266); — acc. pl. f. eaf, vii a 52, eaf, i b 42; — acc. pl. n. eo, vi a 20, eu, ii a 2, ii b 9. See also er-ont. 195.

ereçlu 'sacrarium', 'shrine' or 'altar', acc. sg., iv 13, ereçlum-a, iii 35, iv 3, 10, ereclum-ař, iv 6 (aes ereçlam-ař); — loc. sg. ereçle, iv 17, 19. 112, α. eretu, see heri.

erietu 'arietem', ii a 6. 99, 4.

erom, eru, see est.

er-ont 'idem', nom. sg. m., vi b 24, eri-hont, vi b 50; — gen. sg. f. erarunt, iv 1; — abl. sg. m. eru-hu, ii b 22; **128**, 2, α ; — abl. sg. f. era-hunt, i b 23, era-font, vi b 65 (**201**, 6); — nom. pl. m. eur-ont, vi b 63; — abl. pl. m. erir-ont, vi b 48; — abl. pl. f. erer-unt, iv 5. **195**, **201**, 6.

eruk 'illic', adv., iii 14. Abl. sg. of erec (cf. 190, 2).

erus 'magmentum'(?), acc. sg., vi b 16, 25, etc. (12 times), erus, i a 33, i b 34, etc. (12 times). **112**, a, p. 304 f.

erse 'tum', adv., vi a 6, eřek, iii 33, 35, iv 3, 21, 32. See erec. 190, 6, 195, e.

eskamitu, iv 1, name given to some part of the struicula, but meaning unknown.

esmei 'huic', vi a 5, 18, esmik 'ei', i a 28, 31; — loc. sg. esme 'in hoc', vi b 55. 114, 195, c, 197, 1.

eso 'hic', nom. sg. f., no. 83; — abl. sg. m. n. essu, vi a 43, esu, vi a 25 etc. (13 times), esu-ku, iv 29; — abl. sg. f. esa, vi b 9, 14; — gen. pl. (?) esum-ek, i b 8, esom-e, vi b 47; — abl. pl. n. esir, vii a 10 etc., isir, vii a 21, 34 (39, 4), esis-co, vi a 18. 145, 3, 196.

esoc 'ita', adv., vi b 25, eso, vi a 2 etc. (14 times), iso, vi a 20 (39, 4), issoc, vii b 3 (39, 4), esuk, v a 1, esu, ii a 3, v a 14. 54, 190, 2, 196, c.

esono- 'sacer,' adj., and neut. subst. 'sacrum, sacrificium.' See sacri-.

1) Adj. Dat. sg., f. esune, v a 4; — abl. sg. f. esuna, v a 5; — acc. pl. f. eesona, vi a 18, esona, vi a 3, 5.

2) Subst. Nom.-Acc. sg. esono, via 57, esunu, ib 9, 38, ii a 20, 21, 42, iii 1, 14, iv 30, esonom-e, vi b 50, 52, esunum-e, i b 14, esunum-en, iii 20; — dat. sg. esone, vi b 11; — loc. sg. esune, v a 6; — gen. pl. (?) esono, vi b 47, esunu, i b 8; — acc. pl. esunu, ii a 2; — abl. pl. esoneir, vi a 18, esunes-ku, v a 11. 15, 3, 112, a, 255, 6.

est 'est', vi a 8 etc. (very frequent), est, i b 18, ii a 15; — sent 'sunt', vi a 15 etc.; — pres. subj. 2 sg. sir, vi b 7, 26, si, vi b 26, sei, vi a 23, 3 sg. si, vi a 38, 48, si, v a 6 etc., sei, vi a 28 (see also anderuacose), 3 pl. sins 'sint', vii b 4, sis, v a 6; 232; — pres. infin. erom 'esse', vii b 2, eru, v a 26, 29, v b 5; — fut. 3 sg. fust, vi a 7 etc., fust, i b 7 etc., fus, vi b 40, 3 pl. furent, v a 22; 221; — fut. perf. 3 pl. fefure 'fuerint', ii a 4; 128, 2, a, 223; — imperat. sg. futu, vi a 30 etc., futu, ii a 22 etc., pl. fututo, vi b 61. 209. est 'ibit', see etu.

preve 'singillatim', adv., i a 28, ii a 9.
190, 1.

prever 'singulis', abl. pl. m., v a 13, 18.
17, 10, 65, 192, 1.

preuendu 'advertito', vii a 11. 16, 21,
161.

preuislatu 'praevinculato', imperat., vii a 49, preuilatu, vi b 60. 144, 248, 1.

prinuatur 'legati, deputies, assistants', nom. pl., vi b 50 etc. (5 times), prinuvatus, i b 19, 23, prinuvatu, i b 15, 41; — abl. pl. prinuatir, vi b 55, 56, 57. No satisfactory etymology.

pro- 'pro-'. 300, 8.

procanurent '*procinuerint', fut. perf., vi a 16. 32, 3, 224.

promom 'primum', adv., vii a 52, prumum, iii 15, prumu, iii 3, 23. 189, 1, a, 190, 5, 191, 1.

Propartie 'Propertii', gen. sg., gent., no. 84.

prufe 'probe', adv., v a 27. 190, 1, 307.
prupehast 'ante piabit', iv 32. 17, 8, 300, 8. See pihatu.

prusekatu 'prosecato', imperat., ii a 28, iii 33, 35, iv 2, prusektu, ii a 28 (211); — perf. pass. partic. acc. pl. n. proseseto, vi a 56, pruseçetu, ii b 12, gen. pl. proseseto, vi b 16, 38, dat. pl. prosesetir, vi b 44, 46, prosesetir, vi a 56 etc. (9 times), proseseter, vi b 20, pruseçete, ii a 12. 210, 3, 211.

pruseçia 'prosicias', acc. pl., ii a 23.

prusikurent 'pronuntiaverint', fut.
 perf., v a 26, 28. 94, 154, 225.

pruzuře 'praestante'(?), iv 23. 94, 137, 2.

pue 'ubi, where', adv., vi b 38, 39, 40, 55,pue, i b 18. 54, 202, 7.

Puemune 'Pomono' or 'Pomoni', dat. sg. iii 26 etc. (6 times); — gen. sg. Puemunes, iv 3 etc. (4 times). 83, 247, 2, a.

pufe 'ubi', vi a 8, vi b 50, vii a 43, pufe,i b 33. 55, 92, 200, 3, 202, 5.

pumpe '-cumque' in pisi pumpe 'quicumque', v a 3, 10. 201, 4, 202, 3.
pumpeřias '*quincuriae, groups of five', nom. pl., ii b 2. 37, 150, 191, 5, 251, 4.

puni 'posca', see poni. puni 'cum', see ponne.

puntes 'quiniones, pentads', nom. pl.,
iii 9, 10; — abl. pl. puntis, iii 4. 146,
153, 191, 5, 247, 1, α.

Pupřike 'Publico'(?), epithet of Puemune, dat. sg., iii 27, 35, iv 10, 12, Pupřiçe, iv 24; — gen. sg. Pupřikes, iv 11, 13, Pupřiçes, iv 4, Pupřçes, iv 26. 106, a.

pur- 'por-'. 264, 1.purka. see porca.

purdouitu 'porricito', imperat., vi a 56, purtuvitu, ii a 24 etc. (10 times; in iv 20 with $\theta = t$; see 25, a), purturetu, ii b 17, purtuetu, ii b 11 (31, b); fut. 2 sg. purtuvies, ii b 28; 221; fut. perf. 2 sg. purtiius, i a 27 etc. (5 times; aes once purtitius); 224, b; — fut. perf. 2 sg. purtincus, i b 33, 3 sg. purdin'siust, vii a 43, purdin'sus, vi b 23, 37, 38, purdinsust, vi b 16, 24; 144, 229, 264, 1; — perf. pass. partic. purditom 'porrectum', nom. sg. n., vii a 45, purdito, vi b 42, purtitu, i b 39, ii a 43, iv 31, v a 18; - acc. pl. f. purdita, vi b 18, purtitaf, i a 18. 16, 19, 51, 96, 102, 3, 215, 1.

pure, pureto, purome, see pir.

purtifele '*porricibilem', ii b 25. 261. Purtupite 'Porricienti'(?), iv 14. Probably mistake for Purtuvite.

puře, see porse.

pus, see post.

puse 'ut', vi a 59 etc. (11 times), pusi,
vi a 20 etc. (7 times), pusei, vi a 27
etc. (3 times), puze, i b 34 etc. (3 times). 55, 137, 2, 200, 3, 202, 6.
pusme, see under poi.

puste, pustin, pustnaiaf, see under
 post etc.

randem-e, name of some building or locality in Iguvium, vi a 14.

ranu, meaning uncertain, probably name of some kind of liquid, abl. sg., ii b 19.

re-per 'pro re', abl. sg., vii b 2, ri, v a 5; — dat. sg. ri, v a 4. 186.

re- 're-'. 264, 1.

rehte 'recte', adv., v a 24, 26, 29. 42, 142, 190, 1.

restatu'instaurato, offer anew', imperat., ii a 5;—pres. part. nom. sg. m. restef, i b 9, reste, vi b 47; 110, 4. 213, 4, a, 264, 1.

revestu 'revisito, inspicito', v a 7, 9. 137, 1, 264, 1.

ri, see re-per.

rofu'rufos', acc. pl. m., vii a 3;—acc. pl. f. rofa, vii a 6. 72, 96.

Rufrer 'Rubri', gen. sg., vi a 14. 55.

rufru 'rubros,' acc. pl. ni., i b 24;— acc. pl. f. rufra, i b 27. 55, 96, 136, 257, 1.

Rubinam-e 'in *Rubiniam', vii a 43, 44, Rupinam-e, i b 35, 36; loc. sg. Rubine, vii a 6, Rupinie, i b 27. 100, 3, b.

rusem-e, meaning uncertain, vii a 8, 9, 23.

s., abbr., 'semissem', v b 17.

sacri- 'sacrificial', adj., and neut. subst. 'hostia'. 187, 2, 257, 2.

1) Adj. Acc. pl. f. sakref, i a 18, 19;—nom.-acc. sg. n. sakre, ii a 6 (possibly subst.), sacre, no. 84.

2) Subst. Nom.-acc. sg. sakre, ii a 5, 21, iii 8, 9, etc.;—acc. pl. sakreu, v a 6;—abl. pl. sacris, vi b 52, 56.

sacro-'sacrificial'. Acc. pl. f. sakra,
i b 29, 37, sacra, vi b 18, vii a 40, 45.
257, 1.

Salier 'Salii', gen. sg., vi a 14.

salu 'salem', ii a 18.

saluom'salvum', acc. sg. m. n., vi a 51 etc. (5 times), saluuom, vi a 41 (31, b), saluo, vi a 31 etc. (8 times);—acc. sg. f. saluam, vi a 51, salua, vi a 31 etc. (4 times);—acc. pl. f. (see 322) salua, vi a 32 etc. (6 times), saluua, vi a 42 (31, b). 258, 1.

sanes 'sanis', abl. pl., iv s.

Sanŝio-'*Sancius', usually epithet of
Fisovius, but also of Fisus, Jupiter,
and Vesticius. Once (ii b 10) used
alone. Voc. sg. Sanŝie, vi b 9 etc.
(6 times), Saçe, ii b 24;—acc. sg.
Sanŝi, vi b 8, Sansi, vi b 6;—dat.
sg. Sansie, vi b 3, Sansii, vii a 37 (173,
2), Sansi, vi b 5, Saçi, i a 15, ii b 10,
17, Saçe, ii a 4. 144, 252, 1, a.

sarsite'sarte, wholly', adv., vi b 11. 244, 3, 325.

Saçe, Saçi, see Sansio-.

Satanes 'Satanis', dat. pl., ii b 4, Satane, ii b 4.

Sate, see Sahatam.

sauitu'sauciato'(?), imperat., vi b 60,
vii a 49. 212, b.

scalse-to 'ex patera', vi b 16, skalçe-ta, iv 15, 18, 20;—loc. sg. scalsie 'in patera', vi b 16, vii a 37; 178, 6. 144.

scapla 'scapulam', vi b 49.

screhto 'scriptum', nom. sg. n., vii b 3;
— nom. pl. n. screihtor, vi a 15; 171,
13. 48, 121.

sehemeniar 'seminarium', adj., acc. sg. n., vii a 52, sehmeniar, i b 42. 257, 4. sehmenier 'sementivis', dat. pl., v b 11, 16, semenies, ii b 1. The sehmenier dequrier were the seed-time festivals of the decuriae. Cf. L. fēriae sēmentīvae.

sei'seorsum', adv., vi a 11 (in seipodruhpei'seorsum utroque'). 200, 2, 263, 2.

sei 'sis, sit', see est.

semu 'medio', abl. sg., vi b 16, sehemu, vi b 36. 189, 1, a, 305.

sent, see est.

seples 'simpulis', abl. pl., iii 17.

sepse 'sane, completely'(?), adv., vi b
11. **244**, 1, b, **325**.

seritu'servato,' 'observe' and 'preserve', imperat., vi a 11 etc. (29 times), serituu, vii a 15, seritu, ii a 24. 102, 4. sersi'sede,' abl. sg., vi a 5. 298.

sersitu 'sedeto', imperat., vi b 41; —
pres. partic. nom. sg. m. serse, vi a 2
etc. (7 times), zeřef, i a 25, 33, 34
(137, 2, note); 110, 4. 131, 212, 3.

sese 'versus', adv., in testru sese 'dextroversus', iii 23, iv 15, and supru sese 'sursus', iv 3. 307.

seso'sibi', vi b 51. 193 with b.

sestentasiaru 'sextantariarum, bimonthly'(?), iii 2. 145, 1, 191, 6, p. 301.

sestu 'sisto', pres. indic. 1 sg., ii b 24,
2 sg. seste, ii b 22 (90, 2); — imperat.
sg. sestu, ii b 22. 45, 213, 4.

sesust, see sistu.

seuacni- 'sollemnis, sacrificial', and subst. 'hostia'. In many passages it is uncertain whether the form is used as adj. or subst. 159, a, 187, 2, 263, 1 with a. See also peracni-.

- 1) Adj. Acc. sg. sevakne, ii a 21, iii 22, iv 16, 18, 19, sevakni, iii 25, 26, 27; abl. sg. sevakni, ii a 38, 39, sevakne, iv 23; acc. pl. sevaknef, iv 22; abl. pl. sevaknis, ii a 36, 37, iv 25, sevakne, iv 9 (178, 9).
- 2) Subst. m. Acc. sg. sevakne, ii b 8, 9, 10 (adj. possible in all these); acc. pl. seuacne, vii b 1.
- seuom 'totum', acc. sg. n. (probably persclo understood; cognate acc. after persnimu), vi a 56, sevum, i a 5; abl. pl. n. seueir 'omnibus', vi a 18. 15, 12, 258, 1.

sihitu, see sihitu.

sim 'suem', acc. sg., ii b 1, si, ii b 7;
acc. pl. sif, i a 7, 14, sif, vi b 3, si, vi a 58.
59, 183.

sir, si, sins 'sis, sit, sint', see est.

sistu 'sidito', iii 8; 114; — fut. perf. 3 sg. sesust 'sederit' (given here rather than with sersitu on account of andersesust beside andersistu), vi a 5. 138, 222, note.

smursim-e, name of some building or locality in Iguvium, acc. sg., vi a 13. snata 'umecta', acc. pl. n., ii a 19, snatu, ii a 34; — abl. pl. snates, iv 9, snate, ii a 37. 114, 325.

somo 'summum,' acc. sg. m., vi a 9; —
— abl. sg. m. somo, vi a 10; 171, 6, α;
— loc. sg. sume, ii a 15, iii 1. 57,
125, 1, 189, 1.

sonitu 'sonato' (transit., 'fill with noise, confuse'), imperat., vi b 60, sunitu, vii a 49. 37, a, 51, b, 212, b, 310.

sopir 'siquis'(?), vi b 54. 199, 202, 14, a. sopo- 'suppus, supinus, the under', adj.; neut. pl. used subst., 'the under parts' (Grk. $"\pi\tau\iota a$). Acc. sg. f. sopa, vi b 17, sopam, vii a 38; — acc. sg. m. supu, iv 17; — acc. pl. f. supaf, ii a 22; — acc. pl. n. sopo, vi b 5, supo, vii a 8, supa, i a 9, 16, ii a 22, 30, 32.

- 57, 306, p. 304. The adjective, except in ii a 22, is used predicatively, in sense equivalent to an adverb or preposition 'under'. See 306.
- sorsalem 'suillam'(?), adj., acc. sg. f., vi b 39;—gen. sg. f. sorsalir, vi b 38. 57, 260, 1, p. 305.
- sorser 'suilli', gen. sg., v b 12, 17;—
 here also, probably, acc. sg. sorsom,
 vi b 24, sorso, vi b 38, suřum, i a 27, 30,
 suřu, ii a 8, 9;— abl. sg. sorsu, vi b
 28, 31, 35, 37;— acc. pl. m. used
 subst., suřuf, i a 33. 57, 260, 1,
 p. 305.
- spahatu 'iacito', imperat., vi b 41; imperat. pass. (dep.) spahmu, vi b 17, spahamu, vii a 39;—perf. pass. partic. nom. sg. n. spafu, v a 20. 110, 3 with a, 308, b.
- spanti 'latus', acc. sg., iii 34, iv 2, spantim-ař, iii 33. 247, 1, a.
- spantea 'lateralia', acc. pl. n., ii a 30. spefa '*spensam, sparsam', acc. sg. f., vi a 56 etc. (4 times); abl. sg. spefa, vi b 5 etc. (5 times). 110, 3, p. 304. Speture '*Spectori', name of a god, dat. sg., ii a 5. 142.
- speturie '*spectoriae', adj., dat. sg. f.,
 ii a 1, 3. 246, 1, a.
- spinia 'columnam, barrier'(?), acc.sg., ii a 36, spina, ii a 38 (100, 3, b), spiniam-a, ii a 37, spinam-ař, ii a 33. Denotes some object, near the altar, which played a part in the ritual observances.
- stakaz 'statutus', ii a 15. 262, 1. staflarem '*stabularem, ovillam'(?), adj., acc. sg. f., vi b 39;—acc. sg. m. staflare, vi b 37, 40. 136, 248, 2, p. 305.
- staflii '*stabularem, ovillum'(?), adj., acc. sg. m., i a 30. Footnote, p. 305. stahmei 'statui', dat. sg., vi a 5, 18. 262, 3.

stahmito 'statutum', nom. sg. n., vi a 8; — dat. sg. stahmitei, vi a 18, stahmeitei, vi a 5. 262, 3.

stahu 'sto', no. 84; — imperat. sg. stahitu, vi b 56, pl. stahituto, vi b 53;
— fut. 3 pl. staheren, i b 19; 128, 2,
a. 83, 204, 6, 210, a, 215, 1.

statita 'statuta', acc. pl. n., ii a 42. 262, 3.

statitatu 'statuito', imperat., ii a 32, ii b 19, iv 9. **262**, 1.

stiplo 'stipulare', pres. imperat., vi a 2;
235; — fut. imperat. sg. stiplatu
'stipulator', vi b 48, 51, steplatu, i b
13. 45.

struðla '*struiculam, struem', a sort of cake, acc. sg., vi a 59 etc. (6 times),
 struhçla, ii a 18, 28, iv 4, struçla, iii 34;
 gen. sg. struhçlas, ii a 41 (266),
 iv 1. 58, 144, 249, 2.

su 'sub', no. 83. 302.

sub-, su-'sub-'. 302.

subahtu 'deponito, setdown, lay aside', imperat., ii a 42, subotu, vi b 25 (? see
35, a); — perf. pass. partic. subator 'omissi', vi a 27, 36, 46, vi b 29; 171, 13. 121, 218, 302.

subocau 'invoco', vi a 22 etc. (15 times),
subocauu, vii a 20 etc. (8 times, all in vii). Also taken by many as perf. 'invocavi'. 102, 2, 153, b, 204, 6, p. 303.

suboco 'invocationes', acc. pl. n., vi a22 etc. (9 times). Also taken bymany as pres. 1 sg. 'invoco'. 279,p. 303.

subotu, see subahtu.

subra 'supra', adv., vi a 15, vi b 17, etc., subra, v a 20; — subra, prep., vi a 15; 299, 8. 55, 157, 1, 188, 2, 190, 3. sukatu 'declarato'(?), iv 16. 94, 154. sufafiaf 'partis exsertas (hostiae), the projecting parts'(?), acc. pl., ii a 22; — gen. sg. sufafias, ii a 41; 266. 302. sufeřaklu, meaning uncertain, acc. sg., iii 17, 19. 302.

sume, see somo.

sumel 'simul', ii a 27. 36, 2, 86, 3.
sumtu 'sumito', imperat., i a 9, 16.
114, c.

sunitu, see sonitu.

supa, see sopo-.

super 'super', prep., i b 41, iv 19. **55**, **301**, 3.

superne 'super', prep., vii a 25. 55,301, 3.

supru sese '*supro-versus, sursus', adv.,
iv 3. 157, 1, 190, 2, 307.

supu, see sopo-.

surur 'item', vi a 20 etc. (6 times), suror, vi b 37; — sururont, vi b 39 etc. (9 times), sururo, vi b 48 (128, 2, a); — suront, vi b 8 etc. (11 times). 197, 6, 201, 6.

suřum, see sorser.

sutentu 'subtendito, supponito', ii a 23. 302.

sue 'si', conj., vi a 7, 16, vii b 3, sve,v a 24, 27. 63, 202, 14.

svepis 'siquis', i b 18, iv 26. 199, 202, 14, a.

suepo 'sive', vi b 47, svepu, i b 8.202, 1.

sueso 'suo', poss. pron., loc. sg., vii b
1, svesu, i b 45, ii a 44. 194 with b.
sviseve 'in sino', loc. sg., ii b 14, 15.
p. 309.

Šerfer *Cerri, Genii', gen. sg., vi b 57
etc. (25 times), Serfer, vi b 61 etc. (4 times), Çerfe, i b 28, 31; — dat. sg.
Šerfe, vii a 3, Çerfe, i b 24; — voc. sg. Serfe, vi b 57, 61.
115, 2.

Šerfio-'*Cerrius,' epithet of Praestita, Torra, and Hontus. Gen. sg. f. Šerfiar, vii a 20 etc. (4 times); — dat. sg. f. Šerfie, vii a 6 etc. (4 times), Çerfie, i b 28, 31; — dat. sg. m. Šerfi, vi b 45, Çefi, i b 4; — voc. sg. f. *Šerfia*, vi b 57 etc. (19 times), *Serfia*, vi b 61, vii a 16. **252**, 1 with a.

çersiaru 'feriarum epularium'(?), gen. pl., ii a 16.

cersnatur cenati', nom. pl., v a 22.
116, 2, 144.

šesna 'cenam', v b 9, 13, 15, 18. **116**, 2, **144**, **251**, 2, a.

*sihitu 'cinctos', acc. pl., vi b 59, sihitu, vii a 48; — dat. pl. *sihitir, vii a 14, 28, 50, sihitir, vi b 62, *sitir, vii a 13. 73, 144.

çihçeřa 'cancellos'(?), acc. pl., iii 15. Possibly from *kinkedā-(cf. Gṛk. κιγκλίδες, L. cingō), but very uncertain. δimo 'retro', adv., vi b 65, vii a 1, çimu,

i b 23. 54, 189, 1, a, 190, 2. cive 'citra', adv., ii b 11. 189, 1, a, 190, 1, 258, 1. 'On this side' is in this passage 'outside', contrasted with fesnere 'within the temple' of the following clause.

T., see Titis.

-ta, see -to.

tafle'in tabula', loc. sg., ii b 12.

Talenate '*Talenati', dat. sg., ii b 4, 5. 259, 3.

tapistenu 'caldariolam' (?), iv 30. 99, 4.

Tarsinatem 'Tadinatem', vi b 58, vii a 47, Tařinate, i b 16, 17;—gen. sg. Tarsinater, vi b 54 etc. (8 times);—dat. sg. Tarsinate, vii a 11. 259, 3. tases 'tacitus', vi a 55 etc. (11 times),

tasis, vi b23, taçez, i a 26 etc. (8 times); — nom. pl. tasetur, vi b 57, vii a 46. 137, 2, 144, 306.

tekuries, see dequrier.

tekvias 'decuriales', nom. pl. f., ii b 1. 31, a, 191, 10, a.

tefe 'tibi', vi a 18, tefe, i b 13, ii b 24. 124, 193 with α .

Tefrali '*Tefrali, pertaining to Tefer', adj., abl. sg., vi b 28, 35.

Tefre '*Tefer,' voc. sg., vi b 27 etc. (10 times), 171, 5;—acc. sg. Tefro, vi b 26, 27;—dat. sg. Tefrei, vi b 22, Tefre, i a 24, Tefri, i a 28.

tefru-to 'ex rogo, from the (place of the) burnt-offering', abl. sg., vii a 46; — acc. pl. n. tefra 'carnes cremandas', ii a 27, iii 32, 34, iv 2. 15, 13, 118.

tehteřim 'tegumentum'(?), iv 20. teio, see tiom.

teitu, see deitu.

tenitu 'teneto', vi b 25. 212, 3.

tenzitim, meaning uncertain, acc. sg., i b 6, tesedi, vi b 46. 131, a.

terkantur's suffragentur'(?), pres. subj., iii 9. 308. Possibly related to Grk. δέρκομαι, etc., the meaning being 'point out (with approval)'. Cf. Goth. ga-tarhjan' point out'.

termnas 'terminatus', no. 84.

termnom-e 'ad terminum', acc. sg., vi b 57, 63, 64; —abl. sg. termnu-co, vi b 53, 55, 57; —abl. pl. termnes-ku, i b 19. 103, 1.

tertim 'tertium', adv., vi b 64. 190, 5, 191, 3.

tertio-'tertius', adj. Acc. sg. n. terti, ii a 28; 172, 173, 1;—acc. sg. f. tertiam-e, vi a 13, tertiam-a, iv 2;—dat. sg. f. tertie, ii b 6;—abl. sg. n. tertiu, vi a 45;—loc. sg. tertie, ii b 14. 191, 3.

tertio 'tertium', adv., vii a 46, tertiu, i b 40. 190, 2, 300, 6, α.

teřte, teřust, etc., see dirsa.

tesedi, see tenzitim.

Tesenocir' *Tesenacis,' abl. pl., vi b 1, 3, Tesonocir, vi a 20, vii a 38, Tesenakes, i a 11, 14. 35, a, 256, 7.

testre etc., see destram-e. tesvam, see dersua.

Teteies 'Tetteius'(?), i b 45, ii a 44. 61, 3, 253, 2. Cf. also 174, end.

tettom-e, name of some building in Iguvium, vi a 13, 14.

tetu, see dirsa.

Ti., see Titis.

tikamne 'dedicatione', ii a 8. 45,107, 2, α , 247, 3.

tiom 'te', acc. sg., vi a 43 etc. (33 times),
tio, vi a 24 etc. (8 times), teio, vi a 22,
tiu, ii a 25. 193 with c.

tiçel 'dedicatio', ii a 15;—acc. sg. tiçlu, iii 25, 27;—abl. sg. tiçlu, ii b 22. 45, 88, 4, 95, 144, 248, 1.

tiçit 'decet', ii a 17. 39, 5, 144, 212, 3. Titis, praen., gen. sg., 'Titi'(?), i b 45; — abbr. Ti., ii a 44, T., v a 3, 15, T., no. 84.

titu, see dirsa.

Tlatie 'Latii', gen. sg., v b 9. 129, 1. -to, -ta, -tu 'ex, ab'. 285, 300, 9.

toco 'sale (conditas)' (?), probably adv., v b 13. Cf. L. tuccēta (pl.) and tucca (Corpus Gloss. Lat. II, p. 202; also tur(e) tuc(ca) vin(o), CIL. V 2072).

todcom-e'ad urbicum', acc. sg., vi a 10; — nom. pl. totcor, vi a 12; 171, 13; — abl. pl. todceir, vi a 11; 144, a. 15, 2, 89, 1, 158, 187, 1, 256, 2.

toru 'tauros', acc. pl., vi b 43, 45, turuf, i b 1, turup, i b 4 (25, α);—abl. pl. tures, i b 20. 69.

totar 'civitatis, urbis', gen. sg., vi a 30 etc. (44 times), tutas, i b 2, 5; — dat. sg. tote, vi a 5 etc. (24 times), tute, i b 13; — acc. sg. totam, vi a 41 etc. (9 times), tota, vi a 29 etc. (4 times), tuta, i b 16; — abl. sg. tota-per, vi a 23 etc. (35 times), tuta-per, i a 5 etc. (12 times), tuta-pe, iii 24; — loc. sg. tote, vi a 36, vi b 29, toteme, vi a 26, 46 (169, 7, a). 15, 2, 72.

touer, see tuer.

traf'trans', prepos., vii a 39, trahaf, vii a 41, traha, vii a 5, 39, 44, 45, tra, i b 31, 35, ii a 13. 110, 4, 301, 4.

trahuorfi 'transverse', adv., vii a 25. 115, 3, 138, 190, 1, 301, 4.

Trebe '*Trebo', dat. sg., i a 8, *Trebo*, vi a 58. 171, 3, a.

trebeit 'versatur', vi a 8. 15, 14, 94, 212, b.

Treblanir' Trebulanis', adj., abl. pl., vi a 19 etc. (12 times), Treblaneir, vi a 22, Treplanes, i a 2, 7;—acc. pl. Treblano, vi b 47, Treplanu, i b 9. 255, 4. tremitu' tremefacito', imperat., vi b 60, vii a 49. 212, b, 310.

tremnu 'tabernaculo', abl. sg., vi a 2, 16. 15, 14, 94, 125, 1, 251, 2, 298. tribřiçu 'ternio', nom. sg., v a 9; 110, 5;—abl. sg. tribřisine, vi a 54; 132, a. 106, a, 144, 181.

trif'tris', acc. pl. m. f., vi a 58 etc. (11 times), treif, vi a 22 (74), trif, i b 24, tref, i a 7 etc. (7 times), tre, i a 3 etc. (4 times); acc. pl. n. triia, iv 2;—abl. pl. tris, iii 18. 191, 3.

trifo 'tribum', acc. sg., vi b 58, vii a 47,
trifu, i b 16; — gen. sg. trifor, vi b 54
etc. (4 times); —dat. sg. trifo, vii a 11;
—abl. sg. trefi-per, iii 25, 30. 184, 185.

trioper 'ter', adv., vi b 55, vii a 51, triiuper, i b 21 etc. (5 times). 192, 2, p. 321, ftn.

tripler 'trinis', abl. pl., v a 21. 192, 1. -tu, see -to.

tuder 'finem', acc. sg., vi a 10, 11;—
nom. pl. tuderor, vi a 12; 171, 13;—
acc. pl. tudero, vi a 15, 16;—dat.-abl.
pl. tuderus, vi a 11 (288), vi b 48. 16,
20, 131, a, 182.

tuderato 'finitum', perf. pass. part. nom. sg. n., vi a s. 16, 20, 131, a, 262, 1.

tuer'tui', poss. pron., gen. sg., vi a 27 etc. (5 times), touer, vi b 30 (2 times);

— abl. sg. f. tua, vi a 30 etc. (13 times), tuua, vi a 42 (31, b). 194 with a. tuf, tupler, see under d-.

tuplak 'furcam'(?), acc. sg. n., iii 14. 32, 3, 178, 11, 179, 191, 2, α, 192, 1, 263, 1.

tures, see toru.

Tursa '*Torra', voc. sg., vi b 58, 61, vii a 47, 49; — gen. sg. Tursar, vii a 46; — dat. sg. Turse, vii a 41, 53, Turse, iv 19, Tuse, i b 31, 43. Related to L. terreō, not torreō. Cf. tursitu.

Turskum 'Tuscum', adj., acc. sg. n., i b 17, Tuscom, vi b 58, vii a 47;—gen. sg. n. Tuscer, vi b 54 etc. (4 times);—dat. sg. n. Tursce, vii a 12. 256, 1, 116, 1.

tursitu 'terreto', imperat., vi b 60, vii a 49, tusetu 'fugato', i b 40, pl. tursituto, vii a 51, tusetutu, i b 41; — pres. subj. 3 pl. tursiandu 'fugentur', vii b 2; 39, 1, 51, 156. 17, 12, 51, 97, 115, 1, 212, 2.

tuta, tutas, etc., see totar. tuva, tuves, etc., see dur.

 $u = \mathbf{v}$, see under \mathbf{v} .

ukar, ukri-per, see ocar.

ufestne 'operculatis'(?), iv 22. **138**, a. uhtretie '*auctura', loc. sg.(?), v a 2, 15. **246**, 1, a, **251**, 1, p. 301.

uhtur 'auctor', title of an official, nom. sg., iii 7, 8;—acc. sg. uhturu, iii 4. 69, 142, p. 301.

ulo 'illuc', adv., vi b 55, ulu, i b 18, v a 25, 28, v b 4. 54, 190, 2, 197, 3.

umen 'unguen', acc. sg., ii a 19, 34;—abl. sg. umne, ii a 38. 125, 2, 151, 181.

umtu 'unguito', ii a 38, iv 13. 153, a. une, see utur.

unu 'unum', acc. sg. m., ii a 6, 8. 67, 1, 191, 1.

upetu, see opeter.

urfeta 'orbitam', a wheel-shaped object held in the hand as a token, ii b 23.

urnasier '*urnariis', abl. pl., v a 2, 15;
— gen. pl. urnasiaru, iii 3. 112, α,
146, 254, p. 301.

urtas, see ortom.

uru, uru, ures, see orer.

uřetu 'adoleto', imperat., iii 12, iv 30. 106, 212, 3.

usaçe, ii a 44, usaie, i b 45. **144**, b. Probably adj., loc. sg., but meaning and etym. wholly uncertain. Possibly from *opsākio-, as if L. *operācius.

ustentu, see ostendu.

ustite 'tempestate'(?), loc. sg., ii a 15, iii 2. Etym. unknown.

ute, see ote.

utur 'aquam', acc. sg., ii b 15; — abl. sg. une, ii b 20. 131, a, 135, a, 180, 2, d.

uvem, see oui. uze, see onse.

U., abbr. praen., 'Vibius', nos. 83, 84. vakaze, uacose, see anderuacose.

vapeře 'sella', abl. sg., iii 7; — acc. pl. uapef-e, vi a 10, vi b 51, vapef-em, i b 14; — abl. pl. uapersus, vi a 9, uapersus-to, vi a 12, 13. 104.

vaputu 'ture' (?), abl. sg., ii b 10, 17 (for ii b 10, see footnote, p. 302);— abl. pl. vaputis, ii b 13. Probably connected with L. vapor.

Uarie 'Varii', gent., gen. sg., no. 83. uas 'vitium', vi a 28, 38, 48. 145, 2.

uasirslom-e, name of some locality in Iguvium, vi a 12.

uasor 'vasa', nom. pl., vi a 19; 171, 13;
— acc. pl. uaso, vi b 40; — abl. pl. vasus, iv 22. 182.

uasetom 'vitiatum', perf. pass. partic. nom. sg. n., vi a 37, uasetom, vi a 47, vi b 30, uaseto, vi a 27;—acc. sg. n. *uasetom-e*, vi b 47, vaçetum-i, i b 8 (p. 306). 211.

vatra 'extari'(?), adj., abl. sg. f., iii 31. uatuo 'exta'(?), acc. pl. n., vi a 57 etc. (6 times), vatuva, i a 4 etc. (5 times), vatuvu, i b 25. Etym. wholly uncertain. See p. 304.

uef 'partis', acc. pl., v b 12, 17.
136, a.
Uehier 'Veiis', abl. pl., vi b 19, 22,
Uehieir, vi a 21, Vehiies, i a 20, 24.
ueiro, see uiro.

veltu 'deligito', imperat., iv 21. 36, 2, 105, 2, 217.

venpersuntra 'ficticia'(?), adj., abl. sg. f., ii a 30, vepesutra, ii b 18; — acc. sg. f. vepesutra, ii b 15; — abl. pl. f. vempesuntres, iv 7. 263, 2.

In ii a 30 the word agrees with karne of the preceding clause, similarly in iv 7 with karnus. In the other two passages it is used substantively, the word for flesh being understood.

vepuratu 'restinguito'(?), imperat., ii a 41. 262, 1.

vepurus 'non igneis, (sacrifices) without fire'(?), adj., abl. pl., v a 11. 263, 2.

uerfale 'templum', place marked off for taking the auspices, vi a 8. 136.
Cf. 'In terris dictum templum locus augurii aut auspicii causa quibusdam conceptis verbis finitus', Varro L. L. 7, 8.

uerir 'porta', abl. pl., vi a 58 etc. (11 times), uereir, vi a 22, ueris-co, vi a 19 etc. (9 times), veres, i a 2 etc. (6 times); — acc. pl. uerof-e, vi b 47, veruf-e, i b 9 (171, 13). 15, 15.

veskla 'vascula', acc. pl., ii a 19, vesklu, i b 29, 37, ii a 34, ii b 19;—abl. pl. uesclir, vii a 9 etc. (8 times), veskles, ii a 31, 37, etc. (5 times). 88, 4, 99, 7, 144, 249, 2.

uesticatu 'libato', imperat., vi b 16, vii a 8 etc. (5 times), vestikatu, ii a 24 etc.
(4 times); — uesticos 'libaverit', vi b 25; 230, a, 308, a. 308, c.

uestis 'libans', vi b 6, 25, *uesteis*, vi a 22. **308**, c.

vestiçia 'libamentum', acc. sg., iv 14, 19, vestiçam, i a 28, vestiça, i a 17, 31, vesteça, iv 17, uestisiam, vi b 39, uestisia, vi b 6 etc. (5 times);—gen. sg. uestisiar, vi b 16, 38, vii a 38;—abl. sg. vestiçia, ii a 27, vistiça, ii b 13 (39, 5), uestisia, vi b 5, uestisa, vii a 37. Like L. libamentum, not wholly confined to liquid offerings. 308, c. Uestisier '*Vesticii', gen. sg., name of a god (probably of libation, like L. Libasius), vi a 14;—dat. sg. Vestiçe, ii a 4. 308, c.

uestra 'vestra', abl. sg. f., vi b 61. 194.
Vesune '*Vesonae', dat. sg., name of a goddess, iv 3, 6, etc. 247, 2, a.

vetu 'dividito', i b 29, 37. 136, α.

uia 'via', abl. sg., vi b 52 etc., via, iii 11, vea, i b 14, 23. **31**, α , **101**.

vinu 'vinum', acc. sg., ii a 18, 40, ii b 14;—abl. sg. vinu, i a 4 etc., uinu, vi a 57, vi b 19, 46. 21.

uiro 'viros', vi a 42 etc. (8 times), ueiro,
vi a 30, 32, 39.
99, 5, 171, 11, a.
uirseto 'visum', vi a 28, 38, 48, vi b 30.

uirseto 'visum', vi a 28, 38, 48, vi b 30. **45, 244**, 4.

Uistinie 'Vestinii', gent., gen.sg., no.84.
vitlaf 'vitulas', acc. pl., i b 31, uitla,
vii a 41.

vitlu 'vitulum', acc. sg., ii b 21, 24;—
acc. pl. vitluf, i b 1, vitlup (25, α),
i b 4, uitlu, vi b 43, 45. 39, 6, 88, 4.
uocu-com 'ad aedem'(?), abl. sg., vi b
43, 45, vuku-kum, i b 1, 4;— acc. sg.
vuku, iii 21, vukum-en, iii 20;— loc.
sg. vuke, iii 3, 21. 67, 1. Connection with L. lūcus (by 104) is also

held by some.

Uofione '*Voviono' or '*Vovioni', 'deo votorum', dat. sg., vi b 19, Vufiune, i a 20. 247, 2, α.

Uois., abbr. praen., 'Volsii'(?), no. 84. Cf. **105**, 3.

Uoisiener 'Volsieni', gen. sg., no. 84. 105, 3.

uomu, see anderuomu.

uouse 'voto'(?), dat. sg., vi b 11. 152, a.

vuke, vuku, see uocu-com.

vufetes 'votis, consecratis', abl. pl., ii a 31, iv 25. 152.

Vufiune, see Uofione.

vufru 'votivum', acc. sg. m., ii b 21, 24, 25. 152, 257, 1.

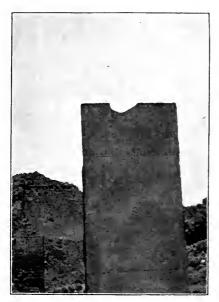

vurtus 'mutaverit', fut. perf., ii a 2. 17, 14.

Vuçiia-per 'pro Lucia'(?), adj., abl. sg. f., ii b 26. 72, a.

vutu 'lavato', imperat., ii a 39. 104, 213, 1, a.

Vuvçis 'Lucius'(?), i b 45, ii a 44. 72, a, 104.

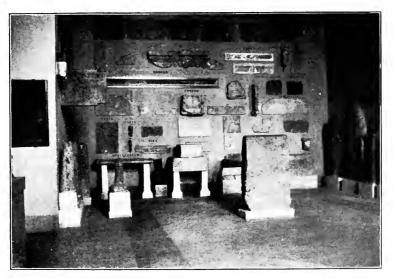

zeřef, see sersitu.

Inscription Painted in Red on the Front of the "House of Pansa" at Pompeii. Our no. 15.

One of the Iovilae-Dedications, now in the Naples Museum. Our no. 29

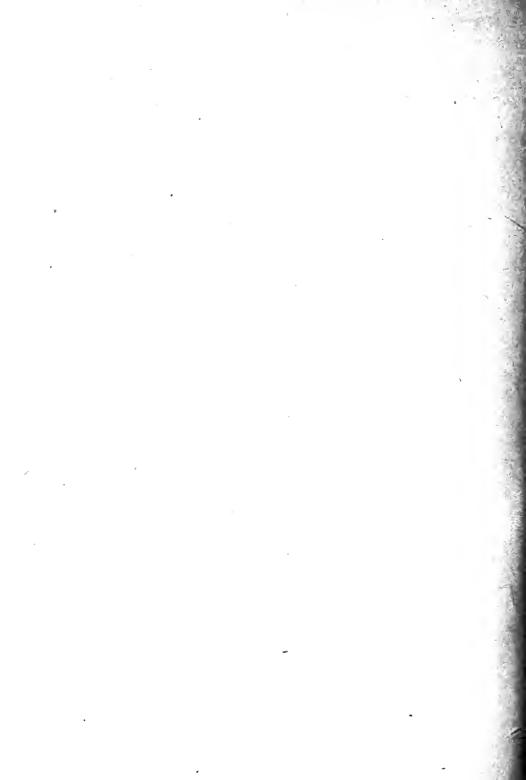

ALCOVE OF OSCAN INSCRIPTIONS IN THE NAPLES MUSEUM.

FACSIMILE OF OSCAN INSCRIPTION FROM POMPEII, OUR NO. 4 (ZVETAIEFF).

MAP OF CENTRAL ITALY

names of towns from which we have inscriptions are underscored, while the names of towns from which we have coins are marked with a line above. A few Oscan inscriptions come from places further south than the map shows, namely Tegeanum Showing places from which come inscriptions or coins in Oscan, Umbrian, or any of the minor Oscan-Umbrian dialects. in southern Lucania, Vibo Valentia in Bruttium, and Messana in Sicily.
